1.0 INTRODUCTION

This report presents the results of a Phase I Environmental Site Assessment (ESA) conducted by FREY Environmental, Inc. (FREY) for the property located at 777 West Orangethorpe Avenue in Placentia, California (known as "the Site" throughout the rest of this document). The Assessor's Parcel Number (APN) for the Site is 339-112-27. An additional address identified with the Site is 776 South Placentia Avenue. The Site is depicted on Figures 1 through 5.

This Phase I ESA was prepared for Orangethorpe Investment Partner, LLC (User). It is FREY's understanding that the Site is proposed to be redeveloped for multifamily residential purposes.

1.1 TERMINOLOGY

For the purposes of discussion, the following terms are used in this report:

- *Site* refers to the subject property described in Sections 1.0 and 3.1 and shown on Figures 1 through 5.

- *Immediate Site Vicinity (ISV)* refers to adjoining properties. Adjoining properties are defined as any real property or properties with a border that is contiguous or partially contiguous with that of the Site, or that would be contiguous or partially contiguous with that of the Site but for a street, road, or other public thoroughfare separating them. The ISV with respect to the Site is described in Section 3.2.

- *Recognized Environmental Condition (REC),* as defined in ASTM 1527-21, means (1) the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. A d*e minimis* condition is not a REC.

- *Controlled Recognized Environmental Condition (CREC),* as defined in ASTM 1527-21, is a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- *Historical Recognized Environmental Condition (HREC),* as defined in ASTM 1527-21, is a previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls.

- *Vapor Encroachment Condition (VEC),* as defined in ASTM E2600-15, is the presence or likely presence of vapor phase chemical(s) of concern (COC) in the subsurface of the target property (Site) as identified during the vapor encroachment screening process.

- *Chemical(s) of Concern (COC),* as defined in ASTM E2600-15, is a chemical that is present in the subsurface environment, has a vapor pressure greater than 1 mm of mercury, or a Henry's Law Constant greater than 1×10-5 atm m3/mole at ambient temperature and pressure, and can potentially migrate as a vapor into the vadose zone of the Site.

- *Area of Concern (AOC),* as defined in ASTM E2600-15, for potential contaminated facilities with non-petroleum hydrocarbon COCs is equal to 1,760 feet around the Site and 528 feet around the Site for facilities with petroleum hydrocarbon COC.

- The term *"hazardous"* is used in general accordance with its definition in Title 22, Division 4, Chapter 30, California Code of Regulations (CCR). The terms substance, material, and waste are used interchangeably, and no legal distinction is implied between the two terms as used herein.

- *Non-Scope Considerations (NSC)* are additional environmental issues or conditions at the subject property that may warrant discussion or consideration but are outside the ASTM Standard practices of inquiry and do not qualify as RECs.

1.2 OBJECTIVES

The objectives of the scope of work described below were to assess past and present land use practices, Site operations and conditions, and to identify the potential presence of hazardous substances in the soil, soil vapor, and groundwater beneath the Site to the extent feasible, pursuant to the processes described in the American Society for Testing and Materials (ASTM) Standard practices and guidelines (ASTM, 2013, 2015 & 2021) and the All Appropriate Inquires (AAI) rule promulgated by the United States Environmental Protection Agency on November 1, 2005 (EPA, 2005) except whereby noted.

1.3 SCOPE OF WORK

The scope of work designed to provide the information needed to meet the objectives of the investigation was as follows:

- Inspect the Site.
- Conduct a reconnaissance to compile a list of companies and/or businesses that may utilize potentially hazardous materials in the ISV.
- Photograph the Site and the properties in the ISV.
- Interview personnel familiar with the history of the Site, if available.
- Review files for the Site maintained by the City of Placentia Building and Safety Department (PBSD) and Fire and Life Safety Department (PFD), if available.

- Review files for the Site maintained by the Orange County Fire Authority (OCFA) and Orange County Health Care Agency Environmental Health Division (OCHCA), if available.
- Review the California State Water Resources Control Board's (SWRCB) GeoTracker and Department of Toxic Substance Control (DTSC) EnviroStor databases for properties listed within the AST Standard minimum search distance.
- Review files for the Site maintained by the South Coast Air Quality Management District (SCAQMD), if available.
- Review Sanborn maps, historical aerial photographs, topographic maps, phone directories, environmental lien and activity use limitation (AUL) reports, and a government agency database report specifically prepared for the Site by Environmental Data Resources Inc. (EDR).
- Review the EDR Radius Map and the California Department of Conservation Geologic Energy Management Division (CalGEM) Well Finder Website for oil and gas wells, fields, and zones in within a one-mile radius of the Site, and review the EDR Radius Map for radon information.
- Prepare a report summarizing the findings of the information presented above.

1.4 SPECIAL TERMS, CONDITIONS, AND NON-SCOPE CONSIDERATIONS

There are no special terms and conditions associated with this Phase I ESA.

The scope of work did not include NSC considerations, as defined by the ASTM Standard, such as but not limited to: the identification of suspected polychlorinated biphenyls (PCBs) containing and asbestos containing building materials; a screening for lead in water; identification of moisture conditions in existing structures; assessment of regulatory compliance; assessment of cultural, historic, and ecological resources and endangered species; a Site-specific wetlands delineation or a review of flood zone maps; nor the sampling of soil, soil vapor, groundwater, lead-based paint, asbestos containing materials, radon gas, or air.

1.5 ASSUMPTIONS

Findings presented in this report hinge upon the following assumptions:

- FREY assumes the Site, as identified in Section 1.0, has been correctly identified by the User (or a designated representative of the User) in agreements, contracts, and/or proposals signed by the User and FREY.

- FREY assumes information regarding the Site history is provided in good faith by the User, designated representative of the User, Site owner, designated representative of the Site owner, and/or Site operator.

- FREY assumes no responsibility for errors or omissions of information provided the User, designated representative of the User, Site owner, designated representative of the Site owner, and/or Site operator.

- FREY assumes the hydrogeologic conditions (depth to groundwater and groundwater flow direction) beneath the Site, used in the evaluation and determination of environmental concerns for the Site, are similar to those described in Section 2.3.

- FREY assumes the information sourced from the third-party historical information and environmental database provider (EDR) and regulatory agencies (City of Placentia and Orange County) obtained and reviewed for this report provided adequate and accurate information.

1.6 USER RELIANCE

This Phase I ESA was conducted on behalf of and for the exclusive use of the User and may be relied upon by, and is intended exclusively for, the User, and its members, affiliates, related entities, subsidiaries, equity partners, lenders, title insurers, or regulatory/city agencies or current property owner(s) and their agent. FREY is not liable for any unintended usage of this report by any other parties.

This Phase I ESA shall not, in whole or part, be disseminated or conveyed to or used by any other party without the prior written consent of FREY. Any unauthorized party using or relying upon this Phase I ESA shall be liable to FREY for equitable compensation and appropriate punitive damages and shall be responsible to reimburse FREY for and indemnify, defend, and hold FREY harmless from and against any and all costs, claims, liabilities, expenses, lost profits and damages arising as a direct or indirect result of such unauthorized use or reliance.

2.0 PHYSICAL SETTING

Information regarding topography, geology and hydrology are used to evaluate the likelihood of hazardous substances/petroleum hydrocarbons to migrate through soil and/or groundwater onto, within, or from the Site.

2.1 TOPOGRAPHIC SETTING

The Site is relatively flat with an elevation of approximately 200 feet above mean see level (msl) and is located on a gently sloping plain that dips to the west-southwest. The Site location depicted on a topographic map is included as Figure 1.

2.2 GEOLOGY

The Site is situated on the western portion of the lower Santa Ana River Basin, which is part of the Orange County Coastal Plain on the eastern extreme of a broad alluvial plain within the Peninsula Range geomorphic province of California (OCWD, 1984). The Plain, which originates slightly to the east of the Santa Ana Canyon and slopes gently to the southwest, ultimately extends to the Pacific Ocean. The central and northern portions of the Orange County Coastal Plain consist of structurally downfolded strata of the Upper Pleistocene that form a broad synclinal trough. The trough includes successively permeable and impermeable strata, that reach a depth of up to 20,000 feet near the Anaheim/Orange area. The Whittier-Elsinore Fault Zone, which is located north of the Site, is a major geologic structure with evidence of movement in the Quaternary Period or later (OCWD, 1982).

The Site is underlain by Recent Quaternary Alluvium, consisting of non-marine terrace deposits. The Site is located approximately 4.3 miles southeast of the Coyote Hills, near the termination of the Anaheim Nose, an anticlinal feature which dips toward the northwest. The water-bearing deposits beneath the Site have been divided into three regional zones: the Upper, Middle and Lower Aquifer Systems. The Upper Aquifer System is approximately 1,000 feet thick, and consists of water-bearing sands and gravels, interbedded with non-water-bearing silts and clays (DWR, 1967).

In general, as logged in historical subsurface investigations, soils beneath the Site have generally consisted of three distinct lithologic units. These units include: 1) alluvial deposits which consist predominantly of poorly-graded, fine to medium grained sands interbedded with lenses of silts and fine grained silty sands from just below the ground surface to approximate depths of 65 to 70 feet below the ground surface (bgs); 2) the Semi-Perched Aquifer zone which consists primarily of alternating, layers of silts and clays with some, generally discontinuous sands and clays from approximately 70 to 95 feet bgs; and, 3) the Talbert Aquifer zone which consists primarily of poorly graded coarse grained sands and well graded gravels from approximately 95 to 150 feet bgs (FREY, 2021).

2.3 HYDROGEOLOGY

The Site is located within the East Coastal Plain Hydrologic Subarea of the Lower Santa Ana River Subunit of the Santa Ana Hydrologic Unit (Groundwater Basin No. 801.11)(DWR, 2004). The East Coastal Plain Hydrologic Subarea is bound by the Pacific Ocean to the south and southwest, the San Gabriel River to the west and northwest, the Coyote Hills and the Chino Hills to the north, the Santa Ana Mountains to the northeast and east, and the San Joaquin Hills to the southeast. Groundwater in this subbasin generally flows in a southwesterly direction toward the Pacific Ocean from the main recharge areas along the base of the San Jacinto and Santa Ana Mountains, the Chino Hills and from the Prado Flood Control Basin (DWR, 1967).

The Site is located within the Forebay Area of the Orange County Groundwater Basin (719.47). Groundwater within East Coastal Plain Hydrologic Subarea is principally stored in the unconsolidated Pleistocene sediments and is generally unconfined. Groundwater within the East Coastal Plain Hydrologic Subarea has been identified to be beneficial for municipal, industrial, and agricultural use by the DWR (DWR, 2004).

Groundwater beneath the Site has been measured at depths ranging from approximately 70 to 95 feet bgs within the Semi-Perched Aquifer zone, and at depths ranging from approximately 93 to 134 feet bgs within the Talbert Aquifer zone at the Site. Historically, the estimated groundwater flow direction for groundwater within first-encountered groundwater within the semi-perched aquifer zone beneath the Site has been towards the east, northeast, or southeast. The groundwater flow direction within the Talbert Aquifer beneath the Site has historically been towards the west-southwest (FREY, 2021)

The nearest surface bodies of water to the Site are Carbon Creek (500 feet south of the Site) and the Placentia Retarding Basin (1,000 feet to the southwest) which is fed by Carbon Creek (Figure 1).

2.4 GAS AND MINERALS

2.4.1 OIL AND GAS WELLS

FREY reviewed the EDR Radius Map Report – Physical Settings Map (Appendix A) and the CalGEM Well Finder Website for oil and gas wells in the Site Vicinity. The Site is located approximately 3,500 feet west and northwest of the Richfield and Olive Gas/Oil fields. The closest well shown to the Site is a plugged dry-hole located approximately 600 feet north of the Site. The closest active well is located approximately 3,740 feet northeast of the Site (CalGEM, 2022). These wells are not considered RECs.

2.4.2 RADON

The EDR Radius Map Report - Physical settings report (Appendix A) indicates that the Site is located in a low radon exposure zone according to a generalized assessment of radon potential in Orange County. The USEPA lists Orange County as Radon Zone Level 3, for areas where the indoor average radon level is less than 2 picocuries per liter (pCi/L). According to the California radon database, of eleven (11) tests conducted in 91767 zip code area, none had detections of radon greater than 4 pCi/L. The USEPA has an action level of 4 pCi/L (EPA, 2002).

2.5 UTILITIES AND SERVICE PROVIDERS

Electricity:	Southern California Edison Company
Gas:	Southern California Gas Company
Potable Water:	Golden State Water Company
Sanitary Sewer:	Orange County Sanitation District
Storm Water:	Sheet flow across the Site to street drains
Non-Hazardous Waste Disposal:	Republic Services
Hazardous Waste Disposal:	Safety-Kleen or Cleantech Environmental, Inc. (previous use)

3.0 SITE DESCRIPTION AND RECONNAISSANCE

3.1 SITE DESCRIPTION

3.1.1 LEGAL SITE DESCRIPTION

Details of the Site listed below are sourced from Parcel Quest Lite (PQL, 2022). The Site parcel is shown on Figure 2.

Parcel #/ Property Identifier:	339-112-27
Address:	776 S Placentia Ave, Placentia, CA 92870-6832
Parcel Size:	2.72-acre (118,489-square feet)
Use Type:	Commercial
Legal Description:	P BK 257 PG 15 PAR 1

3.1.2 SITE INSPECTION

FREY conducted a Site inspection on February 15, 2022. FREY met with Brian and Kerstin Chuchua, the owners of the Site, who provided access to all areas of the Site. The Site inspection consisted of visual observations of the Site improvements and the adjoining properties as viewed from the Site boundaries or from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless noted otherwise. Representative interior areas of the Site, where safely accessible, were observed, unless noted otherwise. The Site inspection included a visual review of the Site for past or present use, storage, handling, and disposal of potentially hazardous substances, and possible future releases of such substances. Photographs of the Site are attached in Appendix B. The Site layout is depicted on Figure 3.

Structures, Roads, Accessibility and Other Improvements at the Site

One 35,073 square foot building is located at the Site. The building is primarily single story with tilt-up on slab construction, with the exception of the southwest corner of the building. The southwest corner of the building is split level. According to Mr. Chuchu, the Site was formerly used as a car dealership and auto repair center. The building consists of four rooms to the north that were formerly used as the auto repair shop floor and office space. One room in the southwest corner of the building was formerly used for accessories and parts storage. The split level area in the southwest corner of the building was formerly used as the showroom floor and office space.

The exterior of the Site is asphalt paved. A canopy is located in the northeast corner of the Site building and on the central western portion of the Site building. A chain link fence surrounds the property. Vehicle access is located in the middle of the western property boundary via S. Placentia Avenue and from the southeast corner of the Site via W. Orangethorpe Avenue.

Current Site Use

Some of the area inside the Site building formerly used to service vehicles is currently used by the owner for personal storage of vintage vehicles. The Coastal Spa and Patio Store business that is located to the adjacent east of the Site leases the space in southwest corner of the Site building for product storage.

A car detailing business operates outside of the building under the canopy located in the northeast corner of the property. The northeast portion of the parking lot is used for vehicle storage.

On-Site Hazardous Materials Observations

The following table provides a list of observations made during the Site inspection that are related to or may reflect the presence of hazardous materials, a release of hazardous materials, or a potential release of hazardous materials on the Site.

OBSERVATIONS	YES	NO
Hazardous substance and petroleum products in connection with identified uses	X	
Hazardous substance and petroleum products in connection with unidentified uses		X
Drums, totes, and intermediate bulk containers of hazardous substances	X	
Unidentified Substance Containers		X
Aboveground and underground storage tanks (or vent pipes, fill pipes, or access ways indicating their presence)	X	
Standing surface water and pools or sumps containing liquids likely to be hazardous substances or petroleum products		X
Polychlorinated biphenyl (PCB) containing items - electrical or hydraulic equipment known to or likely to contain fluids (such as, but not limited to transformers, capacitors, hoists and machinery)	X	
Heating and Cooling Source		X
Interior Stains or Corrosion on Floors, Walls, or Ceilings other than from Water	X	
Floor Drains, Sumps, Clarifiers and Oil/Water Separators	X	X
Pits, Ponds and Lagoons		X
Exterior Stained Soils or Pavement		X
Stressed Vegetation		X
Onsite Solid Waste Disposal or Unknown Fill		X
Water/ Wastewater Discharge		X
Wells, Septic Systems, or Cesspools		X
Other		X

Additional details regarding the observations noted in the above table are provided below.

- Hazardous substances were found in containers 5 gallons or less in the outdoor area utilized by the car detailing business. These were paints, cleaning solutions, and other chemicals associated with car detailing.
- A bulk container of gasoline (estimated to be about 20 gallons in size) was located in the car detailing area. The gasoline was used to power a pressure washer. The container appeared in good condition.
- Four aboveground storage tanks (ASTs) were located inside the building. One AST was labeled as used antifreeze, one AST was labeled as used oil, and two ASTs were labeled as SAE 5W-20 Motor oil. FREY could not verify if any chemicals remained inside the ASTs. The ASTs appeared in good condition.
- Minor staining was observed on the interior concrete pavement in various areas of the former auto repair areas, consistent with auto repair usage.
- Minor staining was observed in various areas in of the exterior asphalt consistent with general use for parking cars.
- Several floor drains are located inside the building in the areas of former auto repair. One n was observed outside the building, beneath the canopy where the car detailing business operates. Two of the former auto repair rooms have an in-ground vent system that extract exhaust from the room via two long floor drains and out through vent pipes.
- Hydraulic hoists were located inside the building in two of the former auto repair rooms. A transformer was also observed in the southeast corner of the property. No staining was observed around the transformer.

The minor amounts of hazardous materials present on-Site for use by the car detailing business and the minor staining observed on the interior concrete pavement in various areas of the former auto repair areas and on the exterior asphalt parking area are considered de minimis conditions.

The former use of the Site as an auto repair shop with the storage of hazardous substances in ASTs and the presence of hydraulic hoists are of potential environmental concerns. However, these concerns were assessed in 2021 as discussed in Section 6.2, and as such, there appears to be no significant impact on subsurface soil and soil vapor beneath the Site by former hazardous substance use related to the former auto repair businesses on the Site nor by the use and presence of the hydraulic hoists.

3.2 IMMEDIATE SITE VICINITY RECONNAISSANCE

FREY visually reviewed the exterior of properties surrounding the Site on February 15, 2022. The Site is located in a mixed commercial/residential area. Properties in the ISV are labeled on Figure 2 and are shown on photographs included on Appendix A. A description of the properties in the ISV, as identified from the Site walk is as follows:

North: The Site is bound to the north by a three story building occupied by a rehabilitation and therapy offices (774 S. Placentia – Interface Rehab, Inc. and Maxum Therapy).

East: The Site is bound on the east and northeast by commercial and industrial properties along

Hundley Way. Businesses in the immediate Site Vicinity northeast and east of the Site are Edlen Electrical, CA Gate, and Coastal Spa and Patio Store.

South: The Site is bound to the south by a Jack in the Box restaurant and W. Orangethorpe Avenue. Across from W. Orangethorpe Avenue is a trailer park.

West: The Site is bound to the west by S. Placentia Avenue. Across from S. Placentia Avenue is a retail/commercial/office building occupied by the following businesses: Tri-City Pet Hospital, Pennine Plumbing, Fast Signs Fullerton Photographics, California Computer Design, Inc., Meter Man Services, JMC KO, Inc., Dermaesthetics, and Nomad.

No off-Site RECs were identified in the ISV.

4.0 USER RESPONSIBILITIES

4.1 SUMMARY OF USER PROVIDED INFORMATION

FREY provided a copy of the ASTM Standard (ASTM, 2021) User Questionnaire to the User. Mr. Gilad Ganish completed the questionnaire. A copy of the completed questionnaire is included in Appendix C. A summary of the details from the completed questionnaire is below.

Environmental Liens or AULs

According to the User a search of land title records (or judicial records where appropriate) did not identify any environmental liens or AULs filed or recorded against the Site.

Specialized Knowledge

The User does not have any specialized knowledge or experience related to the Site or nearby properties.

Relationship of the Purchase Price to the Fair Market Value

According to the User, the purchase price being paid for Site property reasonably reflects the fair market value of the property.

Commonly Known or Reasonably Ascertainable Information

The User is aware of the past uses of the Site and is aware of environmental cleanups that have taken place at the Site. In addition, the User referred to the SWRCB GeoTracker Leaking Underground Storage Tank (LUST) cleanup case for Site discussed further in Section 6.1.5.

Degree of Obviousness of the Presence or Likely Presence of Contamination

Based on the User's knowledge and experience related to the subject property, there are no obvious indicators that point to the presence or likely presence of releases at the Site.

Reason for Performing Phase I ESA

The purpose of this Phase I ESA is the purchase of the Site by the User.

4.2 USER PROVIDED DOCUMENTS

Land Title Records

FREY was not provided copies of land title records by the User.

Other Environmental Documents Related to the Site

FREY was provided with copies of the following by the User(s):

- A Phase I Environmental Site Assessment (ESA) report completed for the Site by Ninyo & Moore dated May 11, 2021 (N&M, 2021);
- A DRAFT Phase I ESA report for the Site from Tetra Tech BAS dated June 2021 (Tetra Tech, 2021);
- Soil and soil vapor laboratory reports for samples collected at the Site on July 6, 2021, by Tetra Tech;
- An Additional Subsurface Soil and Soil Vapor Investigation and Conceptual Site Model (CSM) report for the Site from FREY dated October 26, 2021, and;
- A copy of an email thread from October 2021 between User representatives and the OCHCA, regarding changing the Site use with the City of Placentia (Appendix C).

A summary of the information in these User supplied documents is provided in Section 6.2.

5.0 INTERVIEWS

Site Owner Interview

Interviews with the current Site owner, Mr. Brian Chuchua, were completed by Ninyo & Moore and Tetra Tech as part of Phase I ESAs (referenced in Sections 4.2 and 6.2) conducted by them in 2021 (N&M, 2021) (Tetra Tech, 2021) and by FREY personnel in August of 2021 during the conduct of subsurface investigation work at the Site (referenced in Sections 4.2 and 6.2) (FREY, 2021). Mr. Chuchua was also on hand and answered questions as needed during the Site visit conducted on February 15, 2022.

According to information provided by Mr. Brian Chuchua during personal interviews with FREY personnel, Mr. Chuchua has owned a majority of the Site property prior to 1974, and the Site was developed and operated as an automotive dealership and service center beginning in the early 1970s.

Mr. Chuchua established the dealership on the Site and sold the business to Don-a-Vee Jeep in the mid-1990s, however, the Chuchua's retained ownership of the property. Don-a-Vee Jeep vacated the dealership several years ago; various third parties use portions of the Site on a temporary basis for parking and storage purposes.

According to Mr. Chuchua, a former heliport fueling system, consisting of one, 8,000-gallon fiberglass underground storage tank (UST) containing aviation fuel and one product dispenser was removed in 1988 and replaced by a dual-compartment gasoline UST for use by the dealership. The dual-compartment gasoline UST and a waste oil UST (former locations shown on Figure 3) were removed around 1995. Mr. Chuchua indicated that fill material may have been brought on Site during the UST removal in 1988.

Mr. Chuchua was aware of drains in the service areas of the building but has no recollection of a clarifier being installed and used at the Site. Mr. Chuchua did recall that a paint booth (discussed in Section 6.1.6) was located in the most northern section of the garage, but that the paint booth was not frequently used and upon sale of the business, Don-a-Vee removed the booth in the mid-1990s.

Mr. Chuchua acknowledged the presence of hazardous materials/petroleum products such as motor oil, gasoline, antifreeze, etc. being used on Site as part of past auto service operations but did not recall the use of non-petroleum hydrocarbon based solvents such as tetrachlorethylene (PCE).

Mr. Chuchua was aware of Phase II ESAs and environmental audit reports for the Site and referred to the SWRCB GeoTracker LUST cleanup case for the Site (discussed in Section 6.1.5). Mr. Chuchua was not aware of any litigation, notices of violation, or notices of possible liability associated with the Site.

Key Site Manger(s) and Previous Site Owner(s) Interviews

There are no significant tenants currently occupying the Site and Mr. Chuchua can be considered the key Site manager. Due to the significant length of time Mr. Chuchua has owned the property (since the early 1970s) no past ownership entities were interviewed for this Phase I ESA.

6.0 RECORDS REVIEW

6.1 GOVERNMENT AGENCY ENVIRONMENTAL RECORDS

6.1.1 PLACENTIA FIRE AND LIFE SAFETY DEPARTMENT (PFD)

FREY submitted a request for Site records on file with the PFD to the City of Placentia. The City of Placentia provided FREY with a 34-page PFD file for the Site on February 23, 2022, a copy of which is provided in Appendix D. A brief summary of the information provided in the files is as follows:

- The file includes fire inspection reports and records with information spanning from 1989 to November 5, 2019 for the use of the Site for motor vehicle service/repair by Brian Chuchua and Don A Vee. The Site is noted to be vacant in 2018 and 2019.

- The records reference a tank removal in April of 1988, the issuance of a permit to install a 12,000-gallon UST in May of 1994, and the removal of a 12,000-gallon aviation fuel UST and a 1,500-gallon waste oil UST in February of 1995 (information of which is also included in documents related to the LUST case discussed in Section 6.1.5).

- Minor fire safety violations, not related to hazardous materials, were reported and noted to be rectified promptly.

No hazardous materials information not already noted elsewhere herein was noted in review of the information provided in the PFD file for the Site

6.1.2 ORANGE COUNTY FIRE AUTHORITY (OCFA)

FREY submitted a records request to the OCFA. The OCFA responded in an email dated February 15, 2022, that Site addresses were are outside the OCFA jurisdiction and to submit request to the Placentia City Fire Department. A copy of the OCFA response is included in Appendix E.

6.1.3 ORANGE COUNTY HEALTH CARE AGENCY (OCHCA)

FREY submitted a request to the OCHCA for Site records pertaining to hazardous materials handling on-Site. The OCHCA responded in an email on February 23, 2022, providing links to approximately 50 downloadable files associated with a LUST case for the Site, which are also accessible online at the SWRCB GeoTracker website and discussed in Section 6.1.5. A copy of the email response from the OCHCA is provided in Appendix E.

The OCHCA response also included links to four downloadable files that included OCHCA Hazardous Waste Generator (HWG) inspection reports, Hazardous Material Release Response Plan (IHMRRP) inspection reports, and California Environmental Reporting System (CERS) printouts, copies of which are included in Appendix E. The information pertains to Premier Chrysler Jeep of Placentia and is dated from 2016 to 2018. The documents noted hazardous material waste as: used oil, used oil filters, waste coolant, waste gasoline, and parts washer waste.

No hazardous materials information not already noted elsewhere herein was noted in review of the information provided in the OCHCA file for the Site

6.1.4 CALIFORNIA DTSC ENVIROSTOR

FREY researched environmental cleanup sites and hazardous waste permitted facilities using the DTSC EnviroStor website (DTSC, 2022). FREY reviewed information for the Site and off-Site properties to assess potential on-Site and off-Site sources of chemicals of concern in soil and groundwater beneath the Site.

Site Facility Listings

The DTSC EnviroStor website does not show any listings for the Site.

Off-Site Facility Listings

The DTSC EnviroStor website does not show any listings for properties in the ISV.

The DTSC EnviroStor website does show numerous facility listings within a ½- to 1-mile radius of the Site including:

- Eight (8) Tiered Permit Cleanup facilities located within approximately ½- to 1-mile from the Site.
- Six (6) State Response Cleanup facilities located within approximately 4,500 feet from the Site.
- Nine (9) Evaluation Cleanup facilities located within approximately ½- to 1-mile from the Site.

The majority of the cases for the facilities shown within a ½- to 1-mile radius of the Site are located west-northwest of the Site and are related to solvent based volatile organic compound (VOC) contamination, particularly tetrachloroethylene (PCE) and trichloroethylene (TCE).

Many of the EnviroStor cases noted within a one mile radius of the Site have correlating GeoTracker cleanup cases. The relevancy of the EnviroStor and GeoTracker cases to environmental conditions at the Site is discussed further in Section 6.2.3.

6.1.5 CALIFORNIA SWRCB GEOTRACKER

FREY researched LUST cleanup, cleanup program, military cleanup sites, waste discharge requirement, UST, DTSC hazardous waste, land disposal, and oil/gas permitted facilities using the SWRCB GeoTracker website (SWRCB, 2022). FREY reviewed information for the Site and off-Site properties to assess potential on-Site and off-Site sources of chemicals of concern in soil and groundwater beneath the Site. A summary of the information gathered from GeoTracker is presented below.

Site Facility Listings

The SWRCB GeoTracker website shows one listing for the Site (SWRCB, 2022). A LUST cleanup case is listed for Brian Chuchua Jeep at 777 Orangethorpe. The LUST case for the Site was closed on July 1, 2019. A summary of details regarding the LUST case for the Site is provided below.

- Petroleum hydrocarbon contamination was originally discovered at the Site during the removal of an 8,000-gallon aviation fuel UST in 1988. Soil samples, collected from the UST pit following removal activities, had elevated laboratory reported concentrations of total petroleum hydrocarbons as gasoline (TPHg), and benzene, toluene, ethylbenzene, and total xylenes (BTEX). A 10,000-gallon gas UST (that had been installed in 1988 in the former aviation fuel UST location) and a 2,500-gallon waste oil UST were removed in 1995.

  Between 1988 and 2015, approximately forty-six (46) soil borings were drilled on-Site in order to define the vertical and lateral extent of petroleum hydrocarbons in soil and groundwater. Soil borings ranged in depth from 30 feet bgs to 150 feet bgs. Soil boring/ former well locations are shown on Figure 5.

  Approximately three hundred (300) soil samples were collected from soil borings advanced at the Site and analyzed for TPHg, total petroleum hydrocarbons as diesel (TPHd), total petroleum hydrocarbons as oil (TPHo), and/or for VOCs including BTEX and fuel oxygenates. VOC analyses of soil samples beginning in 2005 were for the full suite of VOCs including chlorinated hydrocarbons such as the solvent PCE. These compounds are defined as COPC for the further remainder of the document.

  Groundwater sampling has been conducted at the Site thirty-six (36) times during a 21 year period between June 1997 and April 2018 using up to twenty-four (24) groundwater monitoring wells that were installed on-Site. Groundwater chemical analysis included TPHg, TPHd, TPHo, BTEX, and fuel oxygenates.

  Vapor extraction remedial activities were conducted at the Site for 375 days between April of 1991 and May of 1992. It was estimated that 584 gallons (3,504 pounds) of petroleum hydrocarbons were removed from subsurface soils by the vapor extraction activities conducted at the Site.

A shallow soil vapor assessment was conducted at the Site in June of 2015 to assess soil vapor beneath the Site near the northern property line towards the off-Site building adjacent to the Site to the north, soil vapor beneath the Site to the east of the former source area in the direction of the on-Site buildings, and to assess the potential risks of vapor intrusion to commercial workers that occupy the current on-Site building and to occupants of any future development that may be built over the former fueling system location. TPHg and VOCs, including PCE and TCA, were not detected above their respective laboratory detection limits in the soil vapor samples collected during the assessment.

Vapor extraction rebound testing was conducted in October of 2015. TPHg and/ or BTEX were only detected in two of fourteen soil vapor samples collected during the testing and in very low concentrations. PCE was detected in thirteen of the fourteen soil vapor samples at concentrations up to 657.97 ug/m3. Based on the results of vapor extraction testing, the secondary source of petroleum hydrocarbons at the Site appears to have been remediated to the extent practicable.

All remaining Site wells were destroyed in May of 2019 and Site investigation, and corrective action for the release of petroleum hydrocarbons from the former fueling system on the Site was certified complete by the OCHCA in the issuance of a no further action (NFA) letter dated July 1, 2019.

Based on the information reviewed for this LUST case which received closure in 2019 as well as information presented in Section 6.2.3, the closed LUST case for the Site is considered an HREC.

Off-Site Facility Listings

The SWRCB GeoTracker website shows one listing for a property in the ISV. Jack in the Box at 805 West Orangethorpe Avenue located to the adjacent southwest of the Site has a closed LUST cleanup case. A summary of details regarding this LUST case in the ISV is provided below.

- A gasoline station operated at this location prior to 1988. A fueling system consisting of three gas/diesel USTs, fuel dispenser islands, and related fuel appurtenances and a waste oil UST was removed from the property in 1988. Soil impacted by petroleum hydrocarbons was encountered at the property during the removal activities.

  Subsequent actions included soil, groundwater, and/or soil vapor sampling through 2016. The case received closure on March 8, 2019.

Due to the proximity of this facility to the Site, environmental consideration is warranted. However, based on Site investigation work conducted in 2021 (discussed in Section 6.1.3), the hydrogeologic conditions beneath the Site, and the information reviewed for the closed LUST case for the Jack in the Box property, it does not appear shallow soil and soil vapor at the Site has nor will be in the future impacted by the former release of petroleum hydrocarbons at 805 West Orangethorpe Avenue, and as such this facility is not considered an REC.

The SWRCB GeoTracker website also shows numerous listings for other properties located within a one-mile radius of the Site as summarized below.

- Thirty-seven (37) additional closed LUST cases are listed on properties located within a one-mile radius of the Site.

- Twenty-five (25) closed cleanup program cases for non-petroleum hydrocarbon impacts are listed on properties located within a one-mile radius of the Site.

- Eight (8) cleanup program cases that have not received closure for solvent based contamination are shown at distances ranging from 1,750 feet to one-mile from the Site.

Based on the information reviewed for the additional off-Site LUST facility listing as well as information presented in Section 6.2, the additional closed LUST facilities are not considered RECs.

Many of the GeoTracker cleanup program cases related to solvents noted within a one mile radius of the Site have correlating EnviroStor cleanup cases. The relevancy of the EnviroStor and GeoTracker cases to environmental conditions at the Site is discussed further in Section 6.2.3.

6.1.6 SCAQMD

FREY reviewed the Facility Information Detail (FIND) online database maintained by the SCAQMD for facility listings for the Site or for properties within the ISV (SCAQMD, 2022). A summary of the information for the Site and ISV property listing is below.

Site Facility Listings

Three listings for the Site (two for 777 West Orangethorpe Avenue and one for 776 South Placentia Avenue) are identified in the SCAQMD FIND database as follows:

- Don-A-Vee Jeep Eagle of Placentia had an equipment permit for "CFC-12 recovery/recycling (Rule 1411)" (inactive since 1995). No notices of violation or notices to comply are listed.

- Brian Chuchua Jeep had an equipment permit for a "serv stat storage and dispensing gasoline" (inactive since 1989). No notices of violation or notices to comply are listed.

- Brian Chuchua's Jeep, Inc. had an equipment permit for "spray booth paint and solvent" (issued in 1978 and inactive since 1990). No notices of violation or notices to comply are listed.

The use of the Site as a former fueling station resulted in a LUST cleanup case as noted and discussed previously in Section 6.1.5.

The former presence of a spray booth and the potential use of solvent is noted in Section 5.0 and addressed in Section 6.2.

Off-Site Facility Listings

Three listings for 805 West Orangethorpe Avenue (adjacent southwest of the Site) were identified in the SCAQMD FIND database as follows:

- Simon EEI Inc. had an equipment permit for "soil treat vapor extract gasoline under" (inactive since 1991). No notices of violation or notices to comply are listed.

- Darr's Self Service had equipment permits for "serv stat storage and dispensing gasoline" (inactive since 1982) and "amine treating" (inactive since 1982). No notices of violation or notices to comply are listed.

The former use of the property as a gas station is discussed and assessed in Section 6.1.5

6.1.7 ENVIRONMENTAL LIEN AND AUL SEARCH

EDR conducted a review which included a search of deed records for environmental liens and AULs for the Site. According to the most recent deed EDR located on record with Orange County, the Site's title is listed as vested in Brian N & Kerstin C Chuchua Trustees as received from Brian N & Kerstin C Chuchua in a deed dated October 25, 2007. No liens or AULs are reported for the Site in the deed information. A copy of the EDR Environmental Lien and AUL Search is provided in Appendix F.

6.2 USER PROVIDED RECORDS

6.2.1 PHASE I ESAs – N&M AND TETRA TECH

Ninyo & Moore (N&M) prepared a Phase I ESA for the Site, dated May 11, 2021. The N&M Phase I ESA concluded the following conditions were RECs during the conduct of their Phase I ESA for the Site:

- The presence of five underground hydraulic lifts in the service center portion of the Site building.
- The presence of floor drains with surface staining in the service center portion of the Site building.
- The potential presence of a clarifier to the west of the service center building.
- The former LUST case with case closure for commercial land use from the regulatory agency, due to the proposed residential land use of the Site.
- The potential presence of a 2,500-gallon waste oil UST on the Site.
- The potential presence of a spray booth paint on the Site from 1978 to 1990.
- The potential presence of a TPHg groundwater plume beneath the southwest portion of the Site from an adjoining closed LUST case at 805 West Orangethorpe Avenue.

A draft Phase I ESA by Tetra Tech, dated June 2021 was provided to FREY. The draft Phase I ESA concluded the following conditions were RECs during the conduct of their Phase I ESA for the Site:

- The presence of junk vehicles, old equipment, used tires and miscellaneous debris.
- As part of historical operations, there were USTs and above-ground storage tanks (ASTs), hydraulic lifts, a paint booth, and, potentially, a clarifier at the Site.
- Staining and generation of waste.
- The adjacent Jack in the Box property is a former service station, where residual petroleum impacts to groundwater remain. In addition, the Site is located on the edge of the Orange County North Basin Superfund groundwater plume.
- A former fuel UST was found to be leaking in the late 1980s. The release was investigated and remediated and received case closure from the OCHCA in 2019. Tetra Tech BAS considered the closed LUST case to be a HREC.

Based on the findings and conclusions in the Phase I ESAs both Ninyo and Moore and Tetra Tech recommended further subsurface investigation to evaluate the RECs. Additionally, Tetra Tech noted that because LUST case closure was granted for commercial use of the property, consultation with a regulatory agency may be required as part of property redevelopment for residential use. (Note that a consultation occurred and is addressed in Section 6.2.4.)

6.2.2 SOIL AND SOIL VAPOR SAMPLING – TETRA TECH

To further evaluate the RECs noted in Section 6.1.1, Tetra Tech completed soil sampling and shallow vapor sampling at the locations shown on Figures 3 and 4 on July 6, 2021.

Soil Sampling

Soil samples were collected at 5 feet bgs from 5 soil borings advanced at the Site on July 6, 2021. The soil samples were analyzed for TPH in the carbon chain range (TPHcc), CAM Metals, VOCs, and polychlorinated biphenyls (PCBs). Laboratory results of the soil sampling are summarized below.

- TPHcc were not detected above the laboratory detection limit in any of the soil samples.
- With the exceptions of 1.0 mg/kg of chloroform and 1.3 mg/kg of methyl chloride detected in one sample, no other VOCs were detected in the soil samples.
- Metals detected in the soil samples included barium, cadmium, cobalt, chromium, copper, molybdenum, nickel, lead, vanadium, and zinc.
- PCBs were not detected above the laboratory detection limit in any of the soil samples.

FREY compared the results of detected VOC and metal concentrations to their respective regional screening levels (RSLs) for residential soil as listed on the US EPA RSL Summary Table dated November 2020 and their respective San Franscisco Bay Regional Water Quality Control Board (SFBRWQCB) environmental screening levels (ESLs) for residential shallow soil exposure (January 2019). The detected concentrations of the VOCs and metals did not exceed their respective RSLs or ESLs.

Soil Vapor Sampling

Soil vapor samples were collected from 5 feet bgs from 18 soil vapor probes installed at the Site on July 6, 2021. The 18 soil vapor samples and one duplicate sample were analyzed by a laboratory for the full suite of VOCs.

The following VOCs were detected in the laboratory analyzed soil vapor samples: ethylbenzene (seven samples), Freon 113 (one sample), isopropylbenzene (two samples), n-propylbenzene (two samples), tetrachloroethylene (PCE) (eighteen samples), toluene (eighteen samples),1,2,4-trimethylbenzene (TMB) (nine samples), 1,3,5-TMB (five samples), and total xylenes (ten samples).

FREY compared the maximum concentrations of VOCs detected in the soil vapor samples collected from 5 feet bgs on July 6, 2021, to the DTSC SL and the US EPA RSLs for residential indoor air with applied attenuation factors (AF) and the SFRWQCB ESLs for residential subslab soil gas. The DTSC SL and the US EPA RSLs shown are with an AF of 0.001 for future residential buildings above a contaminant source as described in the DTSC *Final: Guidance for Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)* dated October 2011 and an AF of 0.03 for sub-slab soil gas as recommended by the DTSC in the *Human Health Risk Assessment (HHRA) Note Number 3, DTSC-modified Screening Levels* released June 2020.

- Laboratory detected concentrations of ethylbenzene exceeded the US EPA RSL with an applied AF of 0.03 and exceeded the SFBRWQCB ESL in six of the eighteen soil vapor probes sampled on July 6, 2021.

- Laboratory detected concentrations of PCE exceeded the DTSC SL and US EPA RSL with an applied AF of 0.03 and exceeded the SFBRWQCB ESL in all of the soil vapor samples collected and analyzed on July 6, 2021.

6.2.3 ADDITIONAL SUBSURFACE SOIL AND SOIL VAPOR INVESTIGATION & CSM – FREY

FREY conducted an additional soil and soil vapor investigation at the Site in August and September of 2021 to further delineate PCE in soil vapor beneath the Site and to assess for a potential on-Site source of PCE to soil vapor. The investigation included a geophysical survey to detect and delineate, insofar as possible, a possible UST or clarifier, a backfilled excavation resulting from a former UST's or clarifier's removal, and/or any UST-related pipes, conduits, or substructures that could still be in place.

A report documenting the additional subsurface investigation includes a summary of environmental investigation and remedial work conducted at the Site since 1988 as it relates to a closed LUST case (summarized in Section 6.1.5), a summary of the information presented in Sections 6.1.1 and 6.1.2 above, a discussion regarding PCE in soil and potential off-Site sources, a CSM, an evaluation of vapor intrusion risk at the Site, and recommendations (FREY, 2021). A copy of this report is included in Appendix G.

A summary of the information in the report (FREY, 2021), not otherwise described herein, is provided below.

Geophysical Survey

A geophysical subsurface survey was conducted at the Site on August 13 and 16, 2021, which included a survey inside two service rooms of the Site building using ground penetrating radar (GPR) and a survey of an approximate 80 by 150 foot area west of the Site building and south of the fenced enclosure using the frequency domain electromagnetic (EM) method.

The only significant anomalies detected inside the building were two, adjacent rectangular areas approximately 5 feet by 10 feet in size, that were detected east of the service canopy within the northern service room. With exception of two anomalies assumed to be piping, no other significant anomalies were identified in the area of the parking lot that was surveyed.

Advancement of Soil Borings and Soil Sampling

Soil borings B1 through B6, SV1, SV2, SV3, HA1, and HA2 were drilled in August 2021 at the locations shown on Figures 3 and 4 and as noted in the table below.

Borehole Designation	Borehole Location	Core Diameter (in.)	Hand Cleared Depth (ft)	Final Depth (ft)
B1	Adjacent to an existing hoist	4	4	10
B2	Adjacent to an existing hoist	4	4	10
B3	Adjacent to an existing hoist	4	4	10
B4	Adjacent to an assumed former hoist	4	4	10
B5	Adjacent to an existing hoist	4	4	10
B6	On concrete pad in the parking lot near the northwest corner of the service canopy	4	4	10
SV1	In the parking lot adjacent to Tetra Tech soil vapor sample location B-15	10	5	30
SV2	In the parking lot in the area of the former waste oil tank	10	5	30
SV3	Adjacent to an existing hoist and a few feet away from Tetra Tech soil/soil vapor sample location B-2	10	5	30
HA1	In the service building in an area shown to be an anomaly during the geophysical survey	10	5	30
HA2	In the service building in an area shown to be an anomaly during the geophysical survey	10	5	30

Undisturbed soil samples were collected from all borings at 5 foot intervals from approximately 5 feet bgs to the bottom of each borehole. Soil samples collected from soil borings B1 through B5 and SV3 at 5 feet bgs and 10 feet bgs were submitted to a laboratory and and analyzed for TPH-CC. Soil samples collected from soil borings B6 at 5 feet bgs and 10 feet bgs and all soil samples collected from soil borings SV1, SV2, SV3, HA1, and HA2 from 5 feet bgs to 30 feet bgs were submitted for laboratory analyses of VOCs.

Soil Vapor Probe Installation and Soil Vapor Sampling

On August 30 and 31, 2021, soil borings SV1, SV2, SV3, HA1, and HA2 were completed as triple-nested soil vapor probes (Figures 3 and 4) with probe implants set at 4.5 feet bgs, 14.5 feet bgs, and 29.5 feet bgs at the locations shown on Figure 3. Soil vapor sampling was conducted on September 2, 2021. Soil vapor samples (a total 16 soil vapor samples) (one from each triple-nested probe and one duplicate sample) were analyzed for VOCs.

Soil Sampling Laboratory Results -TPH

A total of twelve (12) soil samples were collected near existing and assumed former in-ground hoist locations and analyzed for TPH-CC with a carbon chain breakdown. C_{10}-C_{28} (diesel range organics) were detected in four soil samples, C_{17}-C_{32} (aromatic high range) and C_{24}-C_{36} (motor oil range) were detected in one soil sample, and C_6-C_{44} (total TPH) were detected in seven soil samples.

Laboratory detected TPH concentrations in soil samples collected and analyzed on August 30 and 31, 2021 were compared to the SFBRWQCB ESLs for shallow residential soil and the DTSC SLs for residential soil. The detected concentrations of TPH-CC in soil samples collected on August 30 and 31, 2021 were significantly lower than their respective ESL or SL.

Based on the results of soil sampling conducted next to the existing and the assumed former in-ground hydraulic hoist locations, FREY concluded that it does not appear soil near the hoists has been significantly impacted by TPH, and additional investigation with regards to the hoists is not warranted.

Soil Sampling Laboratory Results -VOCs

A total of thirty-two (32) soil samples were analyzed for full suite VOCs. A total of twelve (12) soil samples were collected at 5 foot intervals from 5 feet bgs to 30 feet bgs and analyzed for VOCs in two areas in which elevated PCE concentrations were detected in soil vapors collected by Tetra Tech. A total of eighteen (18) soil samples were also collected for analyses in areas of potential subsurface solvent sources including: the former waste oil UST area south of the service canopy (samples from 5 foot intervals from 5 feet bgs to 30 feet bgs), the areas within the perimeter of two rectangular subsurface anomalies located in the service building (samples from 5 foot intervals from 5 feet bgs to 30 feet bgs), and a patched concrete area (potential clarifier location) near the northwest corner of the service canopy (samples from 5 and 10 feet bgs).

No VOCs were detected above the laboratory detection limits in any of the soil samples collected on August 30 and 31, 2021 and analyzed for VOCs.

Based on the results of laboratory analyses of soil for VOCs in two areas of elevated PCE concentrations in soil vapor and at potential on-Site subsurface sources for solvents to soil, FREY concluded that additional investigation of soil for VOCs is not warranted.

Soil Vapor Sampling Laboratory Results

Fifteen (15) unique soil vapor samples were analyzed for VOCs. Toluene and PCE were the only VOCs detected above the laboratory detection limits in the soil vapor samples collected as part of this investigation. Toluene was detected in two soil vapor probe samples collected from the 5 foot depth interval. PCE was detected in all of the soil vapor samples.

Concentrations of toluene and PCE detected in soil vapor samples collected on September 2, 2021 were compared to their corresponding ESLs for residential subslab soil gas and corresponding SLs and RSLs for residential air with applied attenuation factors of both 0.001 and 0.03. The maximum laboratory detected concentrations of toluene in soil vapor did not exceed any of the compared regulatory screening levels. In all of the soil vapor samples collected and analyzed, PCE exceeded the DTSC SL and US EPA RSL with an applied AF of 0.03 and exceeded the SFBRWQCB ESL.

Based on the results of the soil vapor sampling completed by Tetra Tech and by FREY, PCE concentrations in soil vapor beneath the Site appear somewhat homogeneous, vertically and laterally with only a slight decreasing trend in PCE concentrations from west to east across the Site. In general, detected concentrations of PCE is soil vapor are relatively low and too diffuse across the Site to indicate any specific on-Site point source. PCE concentrations in soil vapor sampled at the Site in 2015 and 2021 are shown on Figure 4.

PCE Discussion

A significant amount of environmental investigation has been conducted at the Site beginning with the removal of an 8,000-gallon aviation fuel UST in 1988. An additional 10,000-gallon gasoline UST and a 2,500-gallon waste oil UST were removed from the Site in 1995. The focus of subsurface investigations and remediation conducted at the Site between 1988 and 2018 was a release of petroleum hydrocarbons to soil from a former UST as discussed in Section 6.1.5.

Beginning in January of 2005, analyses of soil and groundwater samples for VOCs was included in part of Site investigations. Over two-hundred twenty-five (225) soil samples collected across the Site and from depths ranging from 2.5 feet bgs to 85 feet bgs were analyzed for VOCs between January 2005 and April 2018, and PCE was not detected above the laboratory detection limit in any of the soil samples analyzed for VOCs. Groundwater samples were analyzed for VOCs in twenty two (22) of the former Site groundwater monitoring wells on two (2) to thirteen (13) occasions between January 2005 and April 2018. PCE was detected on occasion in some of the Site wells at concentrations less than 5.0 ug/l (below regulatory actionable screening levels). During vapor extraction rebound testing conducted in October 2015, soil vapor samples were collected from seven (7) former Site wells with various screen intervals ranging between 15 to 35 feet bgs and 50 to 90 feet bgs and analyzed for VOCs. PCE was detected in soil vapor samples collected in October 2015 from each of the seven wells pre- and/or post-test at concentrations ranging similar to those detected in soil vapor samples collected and analyzed in 2021 by Tetra Tech and FREY. These data were submitted to the OCHCA as part of the closed LUST case for the Site and during recent consolation with the OCHCA as noted in Section 6.2.4.

Due to the lack of PCE detected in soil samples and the limited very low concentrations of PCE detected in groundwater beneath the Site (as exhibited by approximately 16 years of subsurface investigation at the Site), FREY concluded that an on-Site point source would likely not have contributed to the presence of PCE in soil vapor in a manner such that the distribution across the Site appears somewhat homogeneous horizontally and vertically (Figure 4). It is also noted that no regulatory data or other information has been revealed that documents the use of PCE on the Site. Additionally, the dissolved phase PCE concentrations in groundwater, which are below drinking water standards and at depths ranging from 75 to 95 feet below ground surface, could not have reasonably impacted on-Site soil vapor as exhibited by 2015 and 2021 concentrations.

Potential Off-Site Sources of PCE

Based on the historical information and the results of soil and soil vapor sampling conducted in 2021, FREY concluded that the potential that PCE has migrated in soil vapor onto the Site from an off-Site source is likely. FREY reviewed information for off-Site cleanup facility listings within one-mile of the Site on the SWRCB GeoTracker website and on the DTSC EnviroStor website for cleanup facilities related to VOCs (particularly PCE). Results of the review as summarized below.

- Eight (8) open cleanup facilities located within a one-mile radius of the Site that are related to solvents and list PCE as one of the primary contaminants of concern. The majority of the facilities are located west and northwest of the Site and one is shown east of the Site. The GeoTracker website lists all eight of the facilities as part of the Orange County North Basin Superfund Site (OCNBSS).

  The OCNBSS is considered one of the nation's most toxic hazardous waste sites and is described as a comingled groundwater plume of chlorinated solvents and other contaminants covering approximately five square miles beneath parts of the cities of Anaheim and Fullerton (EPA, 2021). In the past, the plume was also partially beneath part of the city of Placentia, but the plume has since moved southwest and is located just west of State College Boulevard. The EPA is currently working to further characterize the entire OCNBSS. The California DTSC and the Santa Ana Regional Water Quality Control Board (SA-RWQCB) continue to actively initiate and oversee facility-led investigation and remediation of subsurface contamination (soil and shallow groundwater) at several of the manufacturing facilities identified as possible contributors to the plume.

  FREY reviewed information provided on the GeoTracker website regarding several of the OCNBSS cleanup facilities in the vicinity of the Site (SWRCB, 2022). Many of the facilities have reported elevated concentrations of PCE in soil vapor that exist in soil vapor down to the water table. A summary of information of the facility closest to the Site that is currently identified as an OCNBSS facility is below:

- Investigations at Howmet (Howmet) Global Fastening Systems, located at 800 South State College Boulevard and approximately 1,750 feet northwest of the Site, began in 1996. PCE was found in soil and vapor at the facility property, and soil vapor extraction (SVE) remediation was initiated at the property in 2009. According to soil vapor sampling conducted as part of remedial activities at the facility property, concentrations of PCE as high as 474,000 ug/m3 and 111,000 ug/m3 were reported in 20 foot depth samples collected from beneath the property in 2019 and 2020. Concentrations in the thousands and tens of thousands ug/m3 were still detected in soil vapor samples collected during post-remediation, from depths up to 60 feet bgs, as recent as January 29, 2021 (Geosyntec, 2021).

Given the extensive investigation at the Site, which did not identify a PCE source on-Site, it is FREY's professional opinion that PCE in soil vapor likely diffused from an off-Site release of PCE to soil and migrated through subsurface soil (vadose zone consisting mainly of permeable sands from the ground surface to approximately 70 feet bgs) to the Site. Based on the concentrations of PCE in soil vapor at the Howmet property, its proximity to the Site, and the known distribution and concentrations of PCE in soil vapor beneath the Site, FREY believes that former PCE releases at the Howmet property may have migrated in soil vapor to the Site. Additionally, the OCNBSS may have also contributed to the PCE in soil vapor at the Site.

The location of the Site relative to the Howmet property and the OCNBSS is considered a REC. As discussed more fully below, no further assessment is recommended to investigate this REC.

Based on the information reviewed for off-Site GeoTracker and EnviroStor cleanup facility listings, it is FREY's professional opinion that the potential exists for PCE in soil vapor to have diffused from an off-Site release of PCE to soil and migrated through subsurface soil (vadose zone consisting mainly of permeable sands from the ground surface to approximately 70 feet bgs) to the Site.

Conceptual Site Model and Evaluation of Vapor Intrusion Risk

The potential risks to human health and the environment by contaminants in the subsurface at the Site (particularly PCE in soil vapor) were reviewed by FREY. The soil vapor migration pathway is the only pathway considered complete. Human receptors include building residents and construction workers. PCE is present in soil vapor 5-feet beneath the Site in concentrations that may pose a health risk to building residents or construction workers.

The Site's recent maximum soil vapor PCE concentration from the July 6, 2021 and September 2, 2021 investigations was used to assess potential human health risks posed by subsurface vapor intrusion. The cumulative cancer risk and hazard index for the Site was calculated in accordance with Step 3C of the DRAFT *Supplemental Guidance: Screening and Evaluating Vapor Intrusion* (DRAFT Supplemental VI Guidance) released in February 2020. Based on the initial evaluation of vapor intrusion at the Site due to the presence of PCE, possible actions listed by the DRAFT Supplemental VI Guidance include: none, institutional control, additional investigation/sampling, monitoring, refine risk assessment, mitigation, and remediation (SFBRWQCB, 2020).

Recommendations

Based on the information presented in the CSM, it is FREY's professional judgement that no additional environmental assessment or active remediation is required at this time for the Site. However, FREY recommends that, based on the occurrence of PCE concentrations in soil vapor as demonstrated from the most recent investigations conducted on July 6, 2021, and September 2, 2021, as well as during vapor rebound testing conducting previously on October 13, 14, and 15, 2015, a soil vapor intrusion barrier with a venting system should be installed beneath future residential buildings located on the Site.

6.2.4 OCHCA COMMUNICATION REGARDING SITE USE

User representatives contacted the OCHCA via email in October 2021 to notify them of the change of use of the Site from commercial to mixed-use, including multi-family residential. This was done to satisfy conditions stated in a Remediation Completion Certification issued for the Site in relation to the LUST cleanup case (Section 6.1.5) in which the OCHCA was the lead oversight agency.

The OCHCA responded to the User representative that *"Our site mitigation staff is aware of this closure, and the current data presented can support for the mixed-use development so long as certain conditions remain in place. If Mr. Ganish* (of Orangethorpe Investment Partners, LLC – User) *has any questions or if the development involves any subsurface installation, I'd be happy to have our site mitigation staff reach out to him."*

A copy of the email thread from October 2021 between User representatives and the OCHCA regarding the Site is provided in Appendix C.

6.3 HISTORICAL SITE USE INFORMATION

6.3.1 CITY OF PLACENTIA BUILDING AND SAFETY DEPARTMENT (PBSD)

FREY submitted a request to the City of Placentia for Site records on file with the PBSD. The City of Placentia responded in an email dated February 22, 2022, providing FREY with a 51-page PBSD file for the Site, a copy of which is provided in Appendix D. A brief summary of the information provided in the files is as follows:

- The earliest permits in the file are from 1972 and for Brian Chuchua. Building, electrical, plumbing, and sign permits and a certificate of insurance from 1972 through 1973 are for the development of the Site by Brian Chuchua. However, poor scan quality makes many of the details illegible. Other documents in the file for Brian Chuchua include a roofing permit from 1974, a permit to install a new truck enclosure with fence and gate in 1985, sign permits from 1981 and 1985, and electrical permits from 1986 and 2018.

- Various permits included the file are for Don A Vee Chrysler Jeep Plymouth Eagle Kia and include sign permits from 1994 and 1995, an electrical permit from 1996, a permit to install a shade cover in 1998, and an agreement with the adjacent property owners to the southwest (797 West Orangethorpe Avenue) to alter the wall between the Site and a food business.

- Sign permits for "Auto Dealer" and "Extreme Auto Group" were issued in 2004 and 2008, respectively.

- The file includes a sketch showing the Site building and a helipad located to the adjacent north of the Site and two proposed metal storage sheds that are seen on historical aerial photos described in Section 6.3.4. Due to poor scan quality, no date is legible.

- A W-9 Taxpayer ID and Certificate for Alta Planning + Design, Inc. dated Jan 3, 2020 is included in the file.

6.3.2 SANBORN MAPS

The EDR provided a Certified Sanborn® Map Report (included in Appendix F). The report lists the Site as an unmapped property.

6.3.3 TOPOGRAPHIC MAPS

EDR provided historical topographic maps from 1896, 1898, 1901, 1902, 1932, 1935, 1942, 1949, 1950, 1964/1965, 1972, 1974, 1981, 2012, 2015, and 2018 (included in Appendix F). The Site and properties in the ISV are not depicted on the 1932 and 1942 maps. The 1974 map provided is a compilation of aerial photos. A summary of details from the topographic maps is below.

Site Details

- 1896-1972: No buildings are depicted on the Site in these maps. The 1944 through 1972 maps show the Site use as grove.

- 1974-1981: Two buildings are shown on the Site along the eastern Site boundary. The buildings appear to be the currently existing southern half and northern quarter of the existing Site building.

- 2012-2018: No buildings are shown on this map.

Immediate Site Vicinity Details

- 1896-1935: Placentia Avenue and Orangethorpe Avenue are present. No buildings or any other developments are shown on the properties in the ISV.

- 1942: Properties in the ISV are shown as grove.

- 1949-1950: Flood control basins are shown on the southwest corner of the intersection of Placentia and Orangethorpe Avenues.

- 1964-1972: Groves are no longer present on properties in the ISV with exception of the property to the adjacent west. Small buildings are depicted on properties south of the Site along Placentia and Orangethorpe Avenues. A trailer park is shown immediately south of the Site. The property immediately southeast of the Site is shaded red to indicate dense development.

- 1974: Properties to the northeast and west appear undeveloped.

- 2012-2018: No buildings are shown on this map.

The former use of the Site for agriculture is a potential environmental concern and is discussed further in Section 6.3.4

6.3.4 AERIAL PHOTOGRAPHS

EDR provided aerial photographs from 1938, 1947, 1952, 1963, 1972, 1977, 1987, 1989, 1990, 1995, 2005, 2009, 2012, and 2016 (included in Appendix F). A summary of information derived from the photos is below.

Site Details

- 1928-1963: The Site appears as agricultural land (grove). No buildings are seen on the Site.
- 1972: The Site is cleared of all trees. An irregularly shaped of pile of material straddles the northern Site boundary and may be piles of soil or gravel.

- 1977: What appear to be the currently existing southern half and northern quarter of the existing Site building are present. A large portion of the Site south and west of the Site buildings is paved with many cars parked. A smaller part of the northern portion of the Site appears sectioned off and graded with little vegetation visible (heliport area noted in PBSD file). A small portion on the northeast corner of the Site appears to have vehicles parked throughout.

- 1987: A building addition to the Site now connects the northern and southern portions of the Site building. A narrow rectangular building is on the Site in the heliport area on the northern edge of the Site.

- 1989-1990: What appears to be a concrete pad is visible on the southwest edge of the heliport area and in the area of the former USTs discussed in Section 6.1.5. In the 1990 photo the building on the heliport portion is no longer present.

- 1995-2016: The heliport portion of the Site has been converted to paved parking. A canopy has been added to the western central portion of the Site building as seen in the 2005 photo, at which point the Site appears generally as it exists currently.

The use of the Site for agriculture (groves), as seen in the topographic maps (Section 6.3.3) and the aerial photos, is of concern due to the potential application of arsenical pesticides and herbicides and organochlorine pesticides (OCPs) to irrigated crops. Pesticides such as these are considered toxic and accumulate in near surface soils. However, near surface soils have been disturbed due to grading activities across the Site, and the potential for concentrations of arsenical pesticides and herbicides and OCPs to remain in near surface soil at the Site in concentrations of concern appears unlikely.

Immediate Site Vicinity Details

- 1928-1952: Orangethorpe and Placentia Avenues are both present and appear paved. All properties surrounding the Site are developed as grove.

- 1963: The land to the immediate west is vacant. Two buildings are depicted on the adjacent property to the southwest identified to be a gas station as noted in Section 6.1.5. To the immediate southwest the properties on the northwest and southeast corners of the intersection are developed buildings in a layout that appears like a gas station. The trailer park noted in the topographic maps is present to the immediate south of the Site.

- 1972: The Property to the adjacent north now appears vacant with exception of the irregular shaped pile of material straddling the Site boundary. The property to the adjacent east is also vacant.

- 1977: The property to the immediate west appears planted with low-lying row crops. The heliport that straddles the northern portion of the Site is present on the adjacent property.

- 1987: The helipad and two buildings noted to be storage sheds in the PBSD file are present on the property to the adjacent north. The property to the adjacent northeast and east are developed with the currently existing three large commercial/industrial buildings. The properties to the immediate northwest and west are developed with the two currently existing large multi-tenant commercial/industrial buildings.

- 1989: The gas station buildings on the property to the adjacent southwest have been removed and the property appears vacant.

- 1990: The property to the adjacent southwest appears redeveloped with the currently existing restaurant building.

- 1995: The property to the north is redeveloped with the currently existing medical office building, at which point no significant changes are noted on the properties in the ISV compared to how they exist currently.

With the exception of the gasoline station located to the adjacent southwest of the Site (previously discussed in Section 6.1.5), no other developments of concern were identified on properties in the

ISV in review of the aerial photos.

6.3.5 CITY DIRECTORY

EDR provided a City Directory Image Report which is provided in Appendix F. The City Directory Image Report includes a search for listings from 1965 through 2014 for the Site and addresses in the Site Vicinity on Orangethorpe Avenue and Placentia Avenue. A summary of the information provided by the City Directory Image Report is below.

Site Listings

The Site was identified with listings as follows:

777 W Orangethorpe Ave

- Don A Vee Chrysler Jeep Plymouth (2005, 2010, 2014)
- Alamo Rent-A-Car (2010)
- Extreme Auto Group DBA (2005)
- Auto & Truck Glass, Inc. (2005)
- Brian Chuchua's Jeep (1982, 1987, 1995)
- Four Wheel Drive CT (1992)

776 S Placentia Ave

- Four Wheel Drive CTR (1976, 1982, 1987)
- Jeep Dealer Fullerton (1976, 1982, 1987)
- Brian Chuchua's Jeep (1976)
- Gulf Oil Service Station (1976) – this listing at the Site is an error and is a gas station that formerly existed on the property to the adjacent southwest of the Site at 805 South Placentia Avenue (also identified as 791 or 797 West Orangethorpe Avenue).

With the exception of the former use of the Site as an auto repair facility, no other business listings of concern were identified in the historical phone directory listings for the Site.

Listings for Addresses in the Immediate Site Vicinity

Listings for properties in the ISV were identified as follows:

735 W Orangethorpe Ave

- Don A Vee Jeep Eagle (2005, 2010)
- Designer Gallery Limited (1982, 1987, 1992, 1995)

797 W Orangethorpe Ave

- Jack In The Box (1992, 2005, 2010, 2014)

805 W Orangethorpe Ave

- Ron's Texaco (1987)
- Darr's Self Service (1982)
- XXXX (1976)
- Gulf Oil Service (1973)
- Al's Wilshire Service (1965)

774 S Placentia Ave

- Interface Rehab, Quad Graphics, Rid My Tickets (2014)
- Source Interlink Media (2010)
- Audio Video Interiors, European Car, Import Tuner, McMullen Argus Publishing, Mini Truckin Off Rd, Sport Compact Car, Turbo & High Performance (2005)
- Mc Mullen Publishing (1995)

No other addresses in the ISV were identified in the EDR City Directory Image Report.

With the exception of the former use of the 805 West Orangethorpe Avenue as a gas station (discussed in Section 6.1.5), no other business listings of concern were identified in the historical phone directory listings for properties in the ISV.

6.4 STANDARD REGULATORY DATABASE SEARCH

6.4.1 REGULATORY DATABASE SUMMARY

The EDR Radius Map report, included in Appendix A, provides a summary of standard records information sourced from federal, state, tribal, and local databases containing known and suspected facilities with environmental contamination and known and suspected facilities of potential environmental significance due to hazardous materials handling. The number of listed facilities identified within the approximate minimum search distance from the federal and state environmental records database listings specified in the ASTM Standard is summarized in the table below.

Database		Search Distance (mile)	# of Listings	Site Listed
FEDERAL	NPL (Superfund)	1.0	0	No
	Delisted NPL	0.5	0	No
	CERCLA	0.5	0	No
	CERCLA with NFRAP	0.5	1	No
	RCRA with Corrective Action	1.0	1	No
	RCRA non-CORRACTS TSD	0.5	0	No
	RCRA Generators	Site & ISV	4	Yes
	Institutional /Engineering Control	Site	0	No
	ERNS	Site	0	No
STATE & TRIBAL	Superfund equivalent	1.0	6	No
	Hazardous Waste	0.5	8	No
	Landfill and/or Solid Waste Disposal	0.5	1	No
	Leaking Storage Tank	0.5	31	No
	Registered Storage Tanks	Site & ISV	1	No

Database		Search Distance (mile)	# of Listings	Site Listed
	Institutional /Engineering control	Site	0	No
	Voluntary Cleanup	0.5	0	No
	Brownfield	0.5	0	No
	Additional Environmental record Sources/ EDR Exclusive Records	Varies	109	Yes
	Orphan	Not applicable	3	No

6.4.2 REGULATORY DATABASE SUMMARY

FREY reviewed the regulatory agency database listings in the EDR Radius Map Report (Appendix A) to identify facilities involved in the storage, use, generation, disposal, and/or release of COCs and evaluated the potential for releases at the Site or the migration of contaminants onto the Site from off-site sources via soil, groundwater, or vapor.

In evaluating if a listed facility is a potential environmental concern to the Site, FREY generally applies the following criteria to determine if a facility is of lower potential environmental concern: 1) the facility information does not indicate the handling of COCs, 2) the facility information does not imply the handling of hazardous substances in quantities to be of concern, 3) the facility information does not imply a release of hazardous substances, 4) the facility was recently granted "No Further Action" by the appropriate regulatory agency for a cleanup case, and/or 5) the facility distance from the Site and the hydrogeologic position relative to the Site present a situation in which the likelihood is low that a potential release of hazardous substances from the facility would migrate onto the Site.

When evaluating a facility listing based on hydrogeologic criteria, the depth to groundwater and groundwater flow direction (whether the facility is located up-, cross- or down-gradient of the Site) provides an indication of the potential for contaminants to migrate from the facility and onto the Site. Specifically for the Site, first groundwater is located at 70 to 134 feet bgs and the groundwater is estimated to have an overall flow pattern to the west-southwest.

Evaluation of regulatory agency database listings for the Site and facilities identified within the approximate minimum search distance, as shown on the above table, is provided below.

Site Listings

The Site was identified as Brian Chuchua Jeep, Don A Vee Jeep Eagle Chrysler of Placentia, and/or Derby Acres in the EDR Radius Map report in the following databases: HWTS, HAZNET, FINDS, ECHO, EDR HIST AUTO, HIST UST, RGA LUST, LUST, EMI CORTESE, CERS, CIWQS, and NPDES, RCRA-SQG, and RCRA NonGen / NLR.

The information presented for the Site in the listings is mainly regarding the former fuel and waste oil USTs on the Site and the resultant LUST cleanup case (discussed in Section 6.1.5) and the former use of the Site as an auto repair facility. Information identified in the database listings for the Site not revealed elsewhere in this report was that the former aviation fuel UST and waste oil UST were installed at the Site in 1974.

With exception of the former presence of USTs and the former handling of petroleum hydrocarbon based chemicals as related to the auto repair industry, no other information of concern not presented elsewhere herein was listed for the Site.

Off-Site Facility Listings

Three (3) properties located in the ISV were identified in database listings in the EDR Radius Map report. With exception to information presented on 805 West Orangethorpe Avenue (adjacent southwest to the Site) related to the former presence of a gas station on the property and the resultant closed LUST (discussed in Section 6.1.5), no other potential RECs were identified in the information presented in the EDR Radius Map report for properties in the ISV.

Based on the hazardous materials information reviewed for the additional facilities reported in the EDR Radius Map Report, the distances of the facilities relative to the Site, and the hydrogeologic conditions in the Site Vicinity, no other potential RECs were identified in the EDR Radius Map report (with exception to cleanup facilities associated with chlorinated solvents and the OCNBSS as identified on the DTSC EnviroStor and SWRCB GeoTracker databases noted in Sections 6.1.4, 6.1.5 and 6.2.3).

7.0 FINDINGS AND CONCLUSIONS

FREY has prepared this Phase I ESA in general conformance with the scope and limitations of the ASTM and AAI guidelines. Any exceptions to, or deletions from, this practice are described in Section 1.3 of this report.

Site Development and Use

The Site is a 1.72-acre lot that was first developed prior to 1938 for agricultural use (grove) and used as such through approximately 1972. The Site was developed with a majority of the existing building and parking lot around 1973 for use as an auto dealership and auto repair facility. In addition, a portion of a heliport was developed around 1973. A currently existing addition to the Site building was completed around 1985. The heliport was removed in the early 1990s and the remainder of the Site was paved for parking. No significant development changes to the Site have occurred since 1995, and the Site was operated as a car dealership and auto repair shop through the late 2010s.

The building on Site is approximately 35,073 square feet, located along the eastern Site boundary, and is primarily single story with tilt-up on slab construction, with the exception of the southwest corner of the building. The southwest corner of the building is three floor split level. The building consists of four rooms to the north that were formerly used as the auto repair shop floor and office space. One room in the southwest corner of the building was formerly used for accessories and parts storage. The split level area in the southwest corner of the building was formerly used as the showroom floor and office space.

The exterior of the Site is asphalt paved and surrounded by chain-link fence. A canopy is located in the northeast corner of the Site building and on the central western side of the building. A chain link fence surrounds the property.

Some of the area inside the Site building formerly used to service vehicles is currently used by the owner for personal storage of vintage vehicles. The Coastal Spa and Patio Store business that is located to the adjacent east of the Site leases the space in southwest corner of the Site building for warehouse storage. A car detailing business currently operates under the canopy located in the northeast corner of the property and the northeast portion of the parking area is used for vehicle storage.

Development and Use of Properties in ISV

Placentia and Orangethorpe Avenues were developed prior to 1900. Properties in the ISV were developed as crop land by the early 1930s. A gas station was developed on to the adjacent southwest of the Site and a trailer park to the immediate south of the Site in the early 1960s. In the early 1970s, the properties to the adjacent east were developed with the currently existing commercial/light industrial buildings and the property to the adjacent north was developed with the heliport. The property to the immediate west of the Site was developed with the currently existing commercial/light industrial complex. The gas station to the adjacent southwest was removed around 1988 and replaced with the currently existing restaurant building by 1990. In the early 1990s the heliport was removed and replaced by the currently existing office building to the adjacent north of

the Site. No significant redevelopment of the properties in the ISV has occurred since the early 1990s.

Data Gaps

No significant data gaps were encountered in the determination of the historic use of the Site and properties in the ISV during the course of this Phase I ESA.

On-Site Concerns

- The use of the Site for agriculture (groves), as seen in the topographic maps and photos from the early 1930s through 1972, is of concern due to the potential application toxic pesticides and herbicides to irrigated crops. However, near surface soils have been disturbed due to grading activities across the Site, and the potential for concentrations of toxic pesticides and herbicides to remain in near surface soil at the Site in concentrations of concern appears unlikely.

- An aviation fuel UST and waste oil UST were installed at the Site in 1974. The aviation fuel UST was removed and replaced by a gas UST for use by the dealership in 1988, at which point a LUST case was opened for the Site. The gas UST and waste oil UST were removed from the Site in 1995. A significant amount of soil and groundwater assessment was conducted at the Site as part of the LUST case through 2018. Remediation of petroleum impacted soil beneath the Site was conducted via vapor extraction in the early 1990s. Soil vapor sampling conducted in 2015 indicated no soil vapor intrusion risks related to petroleum hydrocarbons existed in the areas assessed. The LUST case received closure in 2019. The former impacts to the Site from the former fueling systems is an HREC.

- Following recommendations in the 2021 Phase I ESAs, additional subsurface investigations, including two rounds of soil and soil vapor sampling and a geophysical survey, were conducted at the Site in 2021 by Tetra Tech and/or FREY to assess the following on-Site environmental concerns:

    - The former use of the Site for auto repair and the handling of related hazardous substances,
    - The presence of hydraulic hoists,
    - The former presence of a spray paint booth and the potential use of solvent,
    - The potential former presence of a clarifier, and.
    - The potential existence of a waste oil UST on-Site

    The results of the 2021 subsurface investigations indicate that petroleum hydrocarbons do not exist in the shallow soil and soil vapor at the Site in concentrations that would impact sensitive receptors such as workers or occupants during and after redevelopment of the property.

However, concentrations of PCE in shallow soil vapor that exceed some regulatory criteria appear to be spread throughout the Site, decreasing slightly from west to east across the Site. The rather homogeneous concentrations of PCE in soil vapor spread across the Site, as documented by the 2021 investigations as well as work conducted at the Site in relation to the now closed LUST cleanup case, do not suggest an on-Site source but rather indicate a likely off-Site source.

Additionally, no USTs or clarifiers were identified in the areas investigated.

Based on the results of the 2021 investigations, the above noted Site conditions/uses are not RECs.

No other on-Site RECs, HRECs, or CRECs were identified during the conduct of this Phase I ESA.

Off-Site Concerns

- A gasoline station operated at 805 West Orangethorpe Avenue (adjacent southwest of the Site) from at least the early 1960s through 1988. A LUST case was opened after the removal of the fueling system in 1988. Subsequent actions included soil, groundwater, and/or soil vapor sampling through 2016. The case received closure on March 8, 2019.

  Due to the proximity of this facility property to the Site, environmental consideration is warranted. However, based on Site investigation work conducted in 2021, the hydrogeologic conditions beneath the Site, and the information reviewed for this closed LUST case, shallow soil and soil vapor at the Site has not and is not expected to be in the future impacted by the former release of petroleum hydrocarbons at 805 West Orangethorpe Avenue, and as such this facility is ruled out as an REC.

- Eight (8) open cleanup facilities are located within a one-mile radius of the Site that list PCE as one of the primary contaminants of concern and are listed as part of the OCNBSS. The majority of the facilities are located west and northwest of the Site, and one is shown east of the Site. The closest of these facilities is Howmet Global Fastening Systems, located at 800 South State College Boulevard, approximately 1,750 feet northwest of the Site.

  The OCNBSS is considered one of the nation's most toxic hazardous waste sites and is described as a comingled groundwater plume of chlorinated solvents and other contaminants covering approximately five square miles beneath parts of the cities of Anaheim and Fullerton.

  It is FREY's professional opinion that the PCE identified in soil vapor at the Site likely diffused from potential off-Site release(s) of PCE to soil and PCE impacted soil vapor has migrated through subsurface soil to the Site. The OCNBSS and its related cleanup facilities, such as Howmet, are considered a REC for their apparent impacts to the Site.

No other off-Site RECs, HRECs, or CRECs were identified.

8.0 RECOMMENDATIONS

No additional environmental assessment or active remediation appears required at this time for the Site.

Based on the occurrence of PCE concentrations in soil vapor as demonstrated from the most recent investigations conducted in 2021, as well as testing conducting in 2015, FREY recommends that a soil vapor intrusion barrier with a venting system be installed beneath proposed future residential buildings located on the Site.

9.0 LIMITATIONS

This Phase I ESA report is compliant and consistent with the US EPA's 40 CFR Part 312 Standards and Practices for AAIs and the ASTM Standard Practice for ESAs: Phase I Environmental Site Assessment Process. Please note that the report does not address whether other requirements in addition to all appropriate inquiry have been met. Other requirements may include, but are not limited to, the continuing obligation not to impede the integrity and effectiveness of existing activity and use limitations (AULs), the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting information.

This report was designed to reduce uncertainty regarding the existence of RECs in a manner that recognizes reasonable limits of time and cost. FREY assumes no responsibility for conditions that did not come to our attention despite reasonable care, or for conditions which were not generally recognizable as environmentally unacceptable at the time of this report. An ESA may not wholly eliminate uncertainty regarding the potential for RECs in connection with a Site. Opinions and judgments expressed herein are based on our professional understanding and interpretations of currently available regulatory standards and should not be construed as legal opinions or advice. This report is not intended to be nor interpreted as legal advice.

The findings, conclusions, and recommendations in this report are based on Site conditions as they existed at the time of our assessment. Our review of all documents, lists, databases, and public agency files has been conducted with due diligence. The conclusions represent FREY's professional judgment based on information obtained and reviewed during the course of this assessment. However, our conclusions are based on available information and are further subject to constraints imposed by public agencies on review procedures and information retrieval. As a result, FREY may have been unable to identify potential concerns that it was not made aware of due to such constraints. FREY shall have no on-going obligation to obtain information that was not reasonably ascertainable, practically reviewable, or provided to FREY in a reasonable timeframe to formulate an opinion and complete the assessment by the agreed upon due date.

Future conditions may differ from those described herein, and this report is not intended for future evaluations of this Site unless an update is conducted by a consultant familiar with environmental assessments and the update is completed within the ASTM Standard guidelines and designated time frame.

The factual data and interpretations contained herein pertain to the specific project described in this report and are not applicable to any other project or site.

Our investigation was performed using the standard of care and level of skill ordinarily exercised under similar circumstances by reputable environmental assessors, geologists, and engineers currently practicing in these or similar localities. No other warranty, express or implied, is made as to the conclusions and professional advice included in this report.

This report was compiled partially of information supplied to FREY from third party sources, other information that is in the public domain, and from a visual inspection of the Site. Third party information is accepted and used solely on the basis of the certifications, registrations, and/or reputation of the parties providing the information. However, FREY does not verify the data, findings, or conclusions of third-party sources, or attest to the completeness, accuracy, or adequacy of their work, and makes no warranty and accepts no liability or responsibility to the accuracy of any data, representations, or conclusions made by third parties.

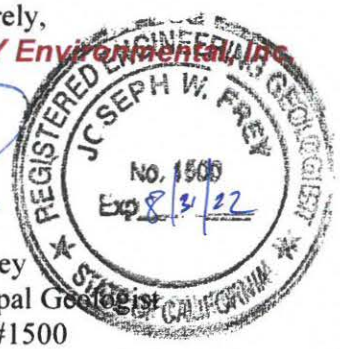

This report is not intended as, shall not be interpreted as, and cannot be considered a verification of regulatory permitting and compliance. FREY assumes no responsibility or liability respecting regulatory permitting or compliance issues. The Site may or may not be subject to regulation and permitting under environmental and health and safety laws, such as, but not limited to, the Clean Air Act, the Clean Water Act, the Solid Waste Disposal Act, the Occupational Safety and Health Act, and other federal, state and local regulations, depending upon historic, current or intended future use.

10.0 PROFESSIONAL STATEMENTS

We declare that, to the best of our professional knowledge and belief, we meet the definition of an environmental professional as defined in section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Should you have any questions regarding this report, please contact us.

Sincerely,
FREY Environmental, Inc.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 09/13/2021 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 34 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Lists of state and tribal landfills and solid waste disposal facilities

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there is 1 CA SWF/LF site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 CA HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 10/18/2021 has revealed that there is 1 CA CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there is 1 CA RGA LUST site

within approximately 0.001 miles of the target property.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-01-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: INSPECTOR COMMENTS On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Oscar Angel, owner. Walked throughout the facility. Observed hazardous waste storage areas. Waste is kept in the shop area, two drums of used oil, one waste antifreeze, and two used oil filters. Containers were closed and properly labeled. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan was not posted, sticker was given and posted in the shop area. The dumpster/enclosure was observed, no signs of dumping. Ownership and employee count were confirmed, 3 employees.

Eval Notes: On site for a routine underground storage tank inspection and witness annual monitoring system certification. Overfill prevention inspection was last conducted on 3/25/19 and is also being conducted this date. Tester certifications for Luis Navarro were verified. System consists of three underground storage tanks (87 & split 91/diesel) installed under VPH monitoring requirements. Tank and tank monitoring information submitted to CERS on 1/22/21 was verified. Site personnel

7-ELEVEN INC. STORE# 37966 (Continued) **S113081880**

indicate that facility experienced a release of approximately 20 gallons of fuel to the tank top following a malfunctioning customer's fuel tank on June 10,2021. Per the franchisee, Amad Mehboob, business reported the release to 7-Eleven's Fuel Maintenance division as per the procedures outlined in their emergency plan. Per the emergency plan reviewed on site, the Fuel Maintenance division is responsible for notifying all appropriate agencies of a release. This Agency has not yet received information [Truncated]

Eval Notes: On site for routine underground storage tank inspection, monitoring system certification, and spill bucket testing. The facility has four double walled tanks monitored by a Veeder Root system. Monitor is operational for audible and visual alarms. The panel reads "all functions normal." Positive shutdown and fail safe programming were verified. ATGs are installed for overfill prevention. All sump and UDC sensors were found to be located at the lowest point of each sump/UDC. The UDC are also equipped float and chain assemblies. All sumps and UDCs appeared to be dry. Fail-safe system functioned properly. Fail-safe system was tested by cutting power to the Veeder Root control panel. Turbine engines shut down when the power was removed. ATGs and an external alarm were installed for overfill protection. ATGs were tested after the inspector left. Spill buckets were visually tested on 4/20/16. This Agency has already received the test results. Leak detectors were tested the [Truncated]

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	11-06-2017
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	INSPECTOR COMMENTS On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Ian Reyes, Regional Laboratory Director. Walked throughout the facility. Observed hazardous waste storage areas. Facility does environmental lab testing for lead, bacteria, and asbestos. They have small hazardous waste storage areas in their labs, but the area is emptied every 30 days and placed in the main hazardous waste storage area. Accumulation time frame was discussed with Ian. Containers of lead and asbestos waste were properly closed. The universal waste lamps were in an open box, discussed the management of universal waste lamps with Ian. The lead waste drums were labeled properly, the asbestos bags and the universal waste lamps were not labeled properly and were missing the word hazardous waste, generator information, content composition, physical state hazardous properties, and accumulation start date. Manifests were [Truncated]

	Section(s) 25508.2
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Business has not complied with the annual submittal requirement. Prior to submitting all three sections of your HMBP to CERS, the following corrections are needed: CHEMICAL INVENTORY. Please complete the Average Daily Amount, Largest Container, Annual Waste Amount, Days on Site field (365 if routinely stored), Storage Pressure (ambient) and Storage Temperature (ambient). During your routine inspection, the max daily amount was observed to be 220 gallons and not the 55 gallons reported. Please update this field. SITE MAP Please add the following to your map: Site orientation, loading areas, internal roads, adjacent streets, storm drains and sewers, access and exit points, emergency shut-offs (natural gas, water and electrical), evacuation staging areas, hazardous material storage areas, and emergency response equipment. CONTINGENCY PLAN Add the telephone number for the Local Unified Program Agency (714-433-6406); add the telephone number for Placentia Linda Hospital [Truncated]

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Waste oil, coolant and filters were observed to be stored beyond allowable accumulation time limits. Have all three of these wastes hauled using a registered hazardous waste hauler and send a copy of your receipt/manifest to this Agency within 30 days

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

U-HAUL REPAIR SHOP PLACENTIA RERS (Continued) **U001577035**

Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	INSPECTOR COMMENT: On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by George Rodriguez, Shop Manager. Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled. An oil water clarifier is present in the truck wash area. Facility states that the clarifier contains bacteria for anaerobic digestion of the oil, the water is discharged to a publicly owned treatment works facility, and the sludge will occasionally be clean out and lay on cardboard to dry before it gets disposed as solid waste. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan is available on site. The dumpster/enclosure was observed. No hazardous waste violations were observed this date.
Eval Division:	Orange County Environmental Health

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-30-2001
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The facility belongs to a group monitoring. The official contact was not available. The facility did not monitor for nitrate, COD and BOD. A letter from their Regional office indicated that they belong to land transportation, not air transportation. As a result, the requirement for additional parameters in Table D does not apply to this facility. Review of AR for 99/00 showed elevated SC. The facility looked generally clean. There was no storage or industrial activities outdoors. There was some trash and dirt in the side yard. Staff asked that housekeeping be improved. The representative agreed to do that. Some old oil stains were next to storage bins.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-16-2003
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: On May 16, 2003. Regional Water Board staff conducted a compliance inspection at the above mentioned facility. The SWPPP was dated 1May 98.The SWPPP should be updated and review for accuracy. This site performs maintenance of fleet vehicles but all work is performed inside. The vehicle wash rack is under cover and discharges directly to a claifyer. The rest of the facility is just a large parking lot.

FEDEX FULA (Continued) **S113023600**

Some general house keeping measures could be increased such as, sweeping to clean up the moderate amount of trash and sediment that was observed throughout the facility. Overall, the facility could file for no exposure.

Eval Notes:	On site for the triennial Hazardous Waste (HW) inspection. Permission to inspect granted by Fed Ex/Stout. The facility is a package delivery/distribution warehouse. It has a valid EPA ID # and is a small quantity generator (SQG). The facility is required to dispose of the HW every 6-9 months. It is currently on a 3-6 month haul away cycle. Most of the HW generated at the site is from fleet vehicle maintenance. Occasionally, a package that contains haz mat is broken in the warehouse or the field. These packages are over packed on site by Fed Ex staff. Most of these broken packages are given back to the "shipper" (company/person who owns the package) for proper disposal. If the shipper refuses to take the package back, Fed Ex stores, labels and disposes of it as HW via manifest and back bills the shipper. (last spill was over 10 years ago per Fed Ex staff). No broken packages/drums were on site during this inspection. All the fleet maintenance HW were stored in [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation:	HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description:	Failure to frequently observe effluent treatment facilities which discharge directly to navigable waters to detect oil spills.
Violation Notes:	Returned to compliance on 05/06/2014. The facility uses spill crates under the 55 gallon drums of product oil being stored in the rear lot.

ARCONIC GLOBAL FASTENERS & RINGS INC (Continued) **S123817760**

	The facility could not find any records of how the accumulated rainwater from these crates is managed. The SPCC states that all rainwater is removed and placed into an oil/water HW drum for disposal. Please find the logs and submit to this Agency for review and violation abatement.

Eval Notes: On site for the triennial Spill Prevention Control and Countermeasure (SPCC) inspection. Permission to inspect granted by Alcoa/Doh (EH&S) and Banaji (EH&S). SPCC was on site and available for review. Written 2-21-13. This SPCC will need to be reviewed/updated every 5 years. Next review date is 2-21-2018. Facility is a Tier I SPCC facility (< 10,000 gallons and no single tank > 5,000 gallons). No spills in the last 5 years. Substantial Harm page in the report. Facility has no tanks, only 55 gallon drums and oil containing machines (tooling/cutting/grinding machines). All oil containing equipment use general secondary containment. Spill absorbent and socks were on site, throughout the building. The drums use sized secondary containment/spill crates. Annual training. See violations. Rainwater discharge logs. See violations.

Eval Notes:	On site for the annual RCRA Large Quantity Generator (LQG) Hazardous Waste (HW) inspection. Permission to inspect granted by Alcoa/Daniel Doh (EH&S) and Alcoa Sai Banaji (EH&S). The site is a RCRA LQG. Facility has a valid/current Federal EPA ID # (CAR000004762). 2014 biennial report was on site, current and complete. OK. Reviewed formal employee training program. OK. Reviewed the annual employee training records. OK. SB 14 not on site. See violations. All HWs are stored within the 90 days accumulation cycle. Several wastes claim the "satellite accumulation" exemption and are within the 1 year accumulation cycle. All HW drums are properly labeled with the HW label or the satellite accumulation label. HW drums have adequate aisle space and OK for inspection. All HW drums are stored in secondary containment pallets. No HW tanks on site. Inspection logs for the HW area were reviewed. OK. Reviewed three years of HW manifests. Properly [Truncated]

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	05-08-2018
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Staff arrived and met with Julie Franken (EHS) and Barbara Ross (EHS Data Entry). Facility is in the business of tooling and machining. Formally was part of Alcoa Fastening Systems, separated in 2016 following an owner change. Currently 100 employees are at the facility, split between 2 shifts. Waterboard Staff began a file review of all documents associated with permit coverage. City inspections are done frequent according to staff. Upon review Waterboard Staff noted that the contact email was incorrect and that a change needed to be made in SMARTS. The Storm Water Pollution Prevention Plan (SWPPP) was last revised December 2016. Last sample taken was taken March 23, 2018. Facility is currently level 2 for iron, latest water sample showed a concentration of 6.5 mg/L. Environmental health and Safety staff believes that the high iron is coming from the property to the west flower beds. Facility Staff were asked if they knew the source, and stated they were not sure. The facility currently does sweeping/vacuuming on a weekly basis. Last annual training was conducted July 13, 2017. The facility utilizes metallocks/petralock/ filtrix near the sampling locations. Staff noted one sampling point, approximately 20 feet from barrel storage, on the south side with filtrix in place. Multiple 55gal barrels were being stored on secondary containment pallets in the outside area. Materials that were not in 55gal barrels or plastic crates were in shipping containers or covered by tarps. Julie Franken stated that facility was looking at means of building a berm to protect from adjacent property run-on and address issues of water from building downspouts going under a tented production area.

Eval Notes:	Alcoa Global Fasteners, Inc. (Alcoa) is a captive metal fabrication company housing various types of metalworking and metal finishing activities. Alcoa manufactures aerospace fasteners made of titanium, aluminum, stainless steel and other related metal alloys for commercial and government clients. This facility is primarily involved with manufacturing fastener-specific tooling required for the installation of aerospace fasteners. All industrial operations occur

ARCONIC GLOBAL FASTENERS & RINGS INC (Continued) **S123817760**

indoors. Hazardous materials were transported to the facility by truck, and off-loaded in designated areas (Photos 3 and 5). Hazardous materials were contained in sealed 55-gallon drums, and stored within secondary containment. Metal turnings generated during the manufacturing of aerospace fasteners were contained in steel bins (Photo 4). The various metals including stainless steel, aluminum, and titanium were separated into specific bins with sealing lids. In addition, each bin had a secondary containment pan placed beneath it so that spent lubricating oils did not spill directly onto the pavement. Storm water collected from the facility was conveyed via concrete swales to a single drop inlet (Photos 2 and 6). The storm water flow gradient was generally from the north to the south at the facility. General housekeeping at the facility was good. The driveway and parking areas are routinely swept to remove unnecessary debris that may impact storm water runoff.

Eval Notes: On site for routine Aboveground Petroleum Storage Tank (APST) inspection. Accompanied on inspection by Minh Le of Orange County Environmental Health. Facility stores the following petroleum based products: -New Oil: approximately 2,300 gallons stored in 55 gallon drums outside -Machine Oil in reservoir: 4,323 gallons -Waste Water Soluble Oil: 825 gallons stored in 55 gallon drums in 90 hazardous waste storage New oil and waste water soluble oil are placed on secondary containment pallets. Facility is using building as secondary containment for oil in machine reservoirs. Multiple spill kits were observed throughout facility. Facility is secured by fencing, lighting and on-site security. Facility is a Tier I facility and is using the Tier I EPA template for the Spill Prevention Control and Countermeasure (SPCC) Plan. SPCC Plan is dated 11/11/2016; plan must be reviewed every 5 years.

Violation Date:	04-24-2014
Citation:	HSC 6.5 25244.21 - California Health and Safety Code, Chapter 6.5, Section(s) 25244.21
Violation Description:	Failure of the generator to adequately complete, and maintain for review, the following requirements of the source reduction report (SB-14): 1) The name and location of the site; 2) Telephone number; 3) Identification Number; 4) The SIC Code5; 5) Length of time the company has been in business at the present site; 6) Major products manufactured or services provided and, if necessary to convey an understanding of the business, their general applications or examples of their applications or end use; 7) Number of employees; 8) A general description of site Operations/Maintenance with corresponding block diagrams focusing on quantity and type of hazardous wastes, raw materials, and final products produced at the site; 9) Identification of all routinely generated hazardous waste streams that annually weigh 600 kg or more and that result from ongoing processes or Operations/Maintenance and exceed 5 percent of the total yearly weight of hazardous waste generated, for extremely hazardous waste, that annually weigh 0.6 kg or more and exceed 5 percent of the total yearly weight of extremely hazardous waste generated at the site; 10) For each hazardous waste stream identified the report shall include all of the following information: A) An estimate of the quantity of hazardous waste generated, B) An evaluation of source reduction approaches available and are potentially viable. The evaluation shall consider at least all of the following source reduction approaches: i) Input change. ii) Operational improvement. iii) Production process change. iv) Product reformulation. v) Administration/ Documentation steps taken to reduce hazardous waste generation including but not limited to: (A) Inventory control; (B) Employee award programs; (C) Employee training; (D) In-house policies; (E) Corporate or management commitment; and (F) Other programs or measures, 11) Consideration of the following factors for each measure evaluated in accordance with subsection (10) of this section (where a specific factor does not apply identify as N/A)

ARCONIC GLOBAL FASTENERS & RINGS INC (Continued) **S123817760**

Violation Notes:	Returned to compliance on 05/06/2014. Facility had an SB-14 report dated 2007. Please find the current SB-14 report and submit to this office for review.

Eval Notes:	On site for the triennial Spill Prevention Control and Countermeasure (SPCC) inspection. Permission to inspect granted by Alcoa/Doh (EH&S) and Banaji (EH&S). SPCC was on site and available for review. Written 2-21-13. This SPCC will need to be reviewed/updated every 5 years. Next review date is 2-21-2018. Facility is a Tier I SPCC facility (< 10,000 gallons and no single tank > 5,000 gallons). No spills in the last 5 years. Substantial Harm page in the report. Facility has no tanks, only 55 gallon drums and oil containing machines (tooling/cutting/grinding machines). All oil containing equipment use general secondary containment. Spill absorbent and socks were on site, throughout the building. The drums use sized secondary containment/spill crates. Annual training. See violations. Rainwater discharge logs. See violations.

ARCONIC GLOBAL FASTENERS & RINGS INC (Continued) **S123817760**

Doh (EH&S) and Alcoa Sai Banaji (EH&S). The site is a RCRA LQG. Facility has a valid/current Federal EPA ID # (CAR000004762). 2014 biennial report was on site, current and complete. OK. Reviewed formal employee training program. OK. Reviewed the annual employee training records. OK. SB 14 not on site. See violations. All HWs are stored within the 90 days accumulation cycle. Several wastes claim the "satellite accumulation" exemption and are within the 1 year accumulation cycle. All HW drums are properly labeled with the HW label or the satellite accumulation label. HW drums have adequate aisle space and OK for inspection. All HW drums are stored in secondary containment pallets. No HW tanks on site. Inspection logs for the HW area were reviewed. OK. Reviewed three years of HW manifests. Properly [Truncated]

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: INSPECTOR COMMENTS On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Barbara Ross, environmental engineer. Walked throughout the facility. Observed hazardous waste storage areas. Facility uses satellite storage through the facility for oily debris waste, absorbent waste, map gas cylinder waste, RCRA sandblast waste, Non-RCRA sandblast waste, and grinding sludge waste. Permasilk RCRA hazardous waste over spray was observed on the floor and is not being cleaned in a timely manor. The hazardous waste 90 storage area had adequate aisle space. Hazardous waste manifest were available and reviewed. Biennial report and SB-14 were available and reviewed. Hazardous waste specific training with job title and description were available for review. Hazardous waste containers were properly closed and labeled, except a small drum of sandblast floor sweepings and raw product, there was no lid, drum was emptied into [Truncated]

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Staff arrived and met with Julie Franken (EHS) and Barbara Ross (EHS Data Entry). Facility is in the business of tooling and machining.

ARCONIC GLOBAL FASTENERS & RINGS INC (Continued) **S123817760**

Formally was part of Alcoa Fastening Systems, separated in 2016 following an owner change. Currently 100 employees are at the facility, split between 2 shifts. Waterboard Staff began a file review of all documents associated with permit coverage. City inspections are done frequent according to staff. Upon review Waterboard Staff noted that the contact email was incorrect and that a change needed to be made in SMARTS. The Storm Water Pollution Prevention Plan (SWPPP) was last revised December 2016. Last sample taken was taken March 23, 2018. Facility is currently level 2 for iron, latest water sample showed a concentration of 6.5 mg/L. Environmental health and Safety staff believes that the high iron is coming from the property to the west flower beds. Facility Staff were asked if they knew the source, and stated they were not sure. The facility currently does sweeping/vacuuming on a weekly basis. Last annual training was conducted July 13, 2017. The facility utilizes metallocks/petralock/ filtrix near the sampling locations. Staff noted one sampling point, approximately 20 feet from barrel storage, on the south side with filtrix in place. Multiple 55gal barrels were being stored on secondary containment pallets in the outside area. Materials that were not in 55gal barrels or plastic crates were in shipping containers or covered by tarps. Julie Franken stated that facility was looking at means of building a berm to protect from adjacent property run-on and address issues of water from building downspouts going under a tented production area.

Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Alcoa Global Fasteners, Inc. (Alcoa) is a captive metal fabrication company housing various types of metalworking and metal finishing activities. Alcoa manufactures aerospace fasteners made of titanium, aluminum, stainless steel and other related metal alloys for commercial and government clients. This facility is primarily involved with manufacturing fastener-specific tooling required for the installation of aerospace fasteners. All industrial operations occur indoors. Hazardous materials were transported to the facility by truck, and off-loaded in designated areas (Photos 3 and 5). Hazardous materials were contained in sealed 55-gallon drums, and stored within secondary containment. Metal turnings generated during the manufacturing of aerospace fasteners were contained in steel bins (Photo 4). The various metals including stainless steel, aluminum, and titanium were separated into specific bins with sealing lids. In addition, each bin had a secondary containment pan placed beneath it so that spent lubricating oils did not spill directly onto the pavement. Storm water collected from the facility was conveyed via concrete swales to a single drop inlet (Photos 2 and 6). The storm

ARCONIC GLOBAL FASTENERS & RINGS INC (Continued) **S123817760**

water flow gradient was generally from the north to the south at the facility. General housekeeping at the facility was good. The driveway and parking areas are routinely swept to remove unnecessary debris that may impact storm water runoff.

Eval Notes: On site for routine Aboveground Petroleum Storage Tank (APST) inspection. Accompanied on inspection by Minh Le of Orange County Environmental Health. Facility stores the following petroleum based products: -New Oil: approximately 2,300 gallons stored in 55 gallon drums outside -Machine Oil in reservoir: 4,323 gallons -Waste Water Soluble Oil: 825 gallons stored in 55 gallon drums in 90 hazardous waste storage New oil and waste water soluble oil are placed on secondary containment pallets. Facility is using building as secondary containment for oil in machine reservoirs. Multiple spill kits were observed throughout facility. Facility is secured by fencing, lighting and on-site security. Facility is a Tier I facility and is using the Tier I EPA template for the Spill Prevention Control and Countermeasure (SPCC) Plan. SPCC Plan is dated 11/11/2016; plan must be reviewed every 5 years.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and

ALCOA GLOBAL FASTENERS, INC. (Continued) **1001023118**

disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-28-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: BEARTECH MANUFACTURING On site for an initial hazardous waste inspection. Ron Clark, Machine Shop Manager, consented to this inspection. Observed facility and inspected the hazardous waste storage area. Facility generates waste cutting fluid. Drums of waste cutting fluid were observed to be in good condition with closed lids, but were not labeled (see violation). Labels with the required information were placed onto the drum at the inspection. This violation is abated and no further action is required. Ensure that all containers of hazardous waste are labeled with the following information the moment that waste is placed into them: generator name and address, words hazardous waste , beginning accumulation date, contents, hazardous characteristic, and physical state. Facility has not obtained an EPA ID Number. Facilities that generate any hazardous waste must obtain and maintain an active EPA ID Number. EPA ID Number is owner and address specific. EPA ID [Truncated]

Eval Notes:	Inspector Comments: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit the following HMD/BEP forms within the next 30 days: - Business Activities form - Owner/Operator Identification form - Hazardous Material Chemical Inventory forms - Facility Site Map - Business [Truncated]

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best

SB THOMAS INC PLACENTIA PLANT (Continued) **1000409817**

management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS:
Name: BIMBO BAKERIES USA, INC.
Address: 500 S PLACENTIA AVE
City,State,Zip: PLACENTIA, CA 92870
Site ID: 140358
CERS ID: 10405663
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 140358
Site Name: Bimbo Bakeries USA, Inc.
Violation Date: 11-23-2015
Citation: 22 CCR 23 66273.35 - California Code of Regulations, Title 22, Chapter 23, Section(s) 66273.35
Violation Description: Failure of the universal waste handler to properly process accumulated universal waste within a maximum accumulation time of one year and /or demonstrate the length of time that the universal waste has been accumulated from the date it became a waste or was received. The universal waste handler may make this demonstration by: 1) Placing the universal waste in a container and marking or labeling the container with the earliest date that any universal waste in the container became a waste or was received; 2) Marking or labeling the individual item of universal waste (e.g., each battery or thermostat) with the date it became a waste or was received; 3) Maintaining an inventory system onsite that identifies the date the universal waste being accumulated became a waste or was received; 4) Maintaining an inventory system onsite that identifies the earliest date that any universal waste in a group of items of universal waste or a group of containers of universal waste became a waste or was received; 5) Placing the universal waste in a specific accumulation area and marking or labeling the area to identify the earliest date that any universal waste in the area became a waste or was received; or 6) Any other method which clearly demonstrates the length of time that the universal waste has been accumulated from the date it became a waste or was received.
Violation Notes: Returned to compliance on 12/09/2015. One 55-gallon drum storing universal waste has an accumulation start date of 9/19/2014. Universal waste can only be stored on site for one year from the accumulation start date. Facility is to immediately dispose of the universal waste container and provide this Agency with the manifest within 30 days of this notice.
Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS,

Site ID: 140358
Site Name: Bimbo Bakeries USA, Inc.
Violation Date: 11-23-2015
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a

SB THOMAS INC PLACENTIA PLANT (Continued) **1000409817**

hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 06/12/2017. Training records were not available at the time of the inspection. Facility was given one week to submit the training records via email or fax. Training records have not been received by this Agency as of 12/14/2015. Annual employee training and documentation of training is required. Please conduct the required training and email or fax training records to this Agency within 30 days of receiving this report.

Eval Type:	Other, not routine, done by local agency
Eval Notes:	EMPLOYEE TRAINING During an inspection of your facility conducted on 11/23/2015, it was noted that you did not have business emergency plan training documentation. At the time of the inspection, you were given 30 days to forward a copy of the required document to this Agency. As of the date of this notice, documentation of training has not been received. Violation I239 remains outstanding and must be corrected. Submit training documentation to this agency within 30 days to avoid further enforcement action. Please contact me if you have any questions regarding this report.

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	INSPECTOR COMMENT: On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Randy Wilson, Plant Manager and Brandyn Hilliard, Plant Engineer. Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled. One 55-gallon drum storing universal waste was stored on-site over allowed accumulation time. Manifests were available and reviewed. Employees are reported to

SB THOMAS INC PLACENTIA PLANT (Continued) **1000409817**

be trained. Emergency plan is available in the conference/meeting room. The dumpster/enclosure was observed. Universal waste container was stored on site longer than allowed accumulation time. Facility is to immediately dispose of the universal waste container and provide this Agency with the manifest within 30 days of this notice.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	08-23-2016
Violations Found:	No
Eval Type:	Industrial Storm Water Compliance Evaluation
Eval Notes:	Regional Board staff (staff) conducted a No Exposure Certification (NEC) inspection of the above facility on August 23, 2016. The facility has two fabric bags stored on two pallets outside by a connex box on the South rear of the building. On August 24, 2016, staff emailed Mr. Hilliard pictures of the issue. On August 24, 2016, Mr. Hilliard stated that the issue will be rectified per the NEC criteria. As of August 30, 2016, the facility has not sent confirmation to staff that the two unsheltered fabric bags have been removed. Until the issue is resolved, the facility does not meet the requirements of the NEC as defined in the Industrial General Permit (IGP). On August 31, 2016 the facility emailed staff pictures of corrected issues. The facility meets the requirements of the NEC as defined in the IGP. No further action is required.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ORANGE COUNTY NORTH BASIN - FULLERTON CROSSINGS DEVELOPMENT (Continued) **S122356438**

Site History: For additional information and reports on this address see also Aeroject General, 601 S. Placentia, Fullerton, (SL0605973469) The Fullerton Crossings development is located at the site of a former manufacturing facility that was operated by Aerojet. Four underground storage tanks (USTs) were removed January 30, 2008. Stained soil was observed below one of the USTs. Soil samples were collected and analyzed for total petroleum hydrocarbons (TPH), volatile organic compounds (VOC) and metals TPH, tetrachloroethene (PCE) and low concentration of various metals were detected in some of the soil sample. In July 2009, contaminated soil was found during excavation of a trench for a storm drain along the southwestern boundary of the site. The trench was originally designed to extend to 12 feet bgs. Odorous and stained soil was observed at approximately 6 feet bgs. Soil samples were collected at two, four and six feet bgs along the alignment of the trench. The samples were analyzed for VOCs and TPH. TPH and VOCs, specifically tetrachloroethylene (PCE) and trichloroethylene (TCE), were detected in the soil samples. Tthe highest concentrations detected were - PCE 12,200 microgram/kilogram (a%g/kg) at 2 feet below grade surface (bgs), TCE 2080 ug/kg at 6 feet bgs, and TPH 27,200 milligrams/kilograms (mg/kg) at 6 feet bgs. In August 2009, eight soil borings were drilled to depths of 15 and 25 ft bgs within and adjacent to the trench boundary, to determine the extent of the contaminated soil in the vicinity of the trench. Selected samples were submitted for VOC and TPH analysis. The highest concentrations of PCE, TCE and TPH detected in the soil samples are: PCE 1020 a%g/kg at 15 ft. bgs, TCE 106 a%g/kg at 15 ft. bgs, TPH 8040 mg/kg at 10 ft. bgs. The highest detected concentrations of PCE, TCE and TPH were from the soil samples that were collected closest to the fence line. Soil excavated from northside

RB Case Number: 2080067
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: Additional information and reports related to soil remediation for this address is available on GeoTracker under the project name of Fullerton Crossings, (T0605993569). Aerojet operated a metal processing and ordnance manufacturing facility from 1968 until at least 1975. Tetrachloroethylene and trichloroethene were used at the facility. The Site is located in the recharge zone of the Orange County groundwater basin. Three groundwater monitoring wells were installed at the site in November 2006. Depth to groundwater was 102

ORANGE COUNTY NORTH BASIN - AEROJET GENERAL (FORMER) GROUNDW (Continued) **S104574472**

to 106 feet from the surface. Trichloroethylene and tetrachloroethylene were detected in all three wells at concentrations ranging from 2.8 to 1,300 micrograms/liter and 44 to 160 micrograms/liter. July 2007, groundwater detected in well PW-2 at 123.5feet below grade. Water table had dropped 17 feet since April 2007. Groundwater samples collected from well PW-2. PCE and TCE concentrations decreased as compared to April sampling event. October 2007, all three wells were dry. The two downgradient wells PW-1 and PW-2 were properly abandoned in March 2009 to accommodate the construction of a new building. A recent groundwater investigation was performed to further assess the hydraulic gradient and the distribution of VOCs in the upper portion of the Upper aquifer system. Three borings were advanced and sampled, and three groundwater monitoring wells installed in April 2016. The groundwater well screened intervals were set 17 to 30 feet below the previous screened intervals of the abandoned groundwater wells. By December 2017 groundwater elevations had risen almost 30 feet in the wells due to recharge efforts in the Basin. Fullerton Crossings/Merlone Geier is the current Site owner. The Fullerton Crossings associated Site has obtained conditional no further action status for soil to a depth of 25 feet below the ground surface. Aerojet continues to monitor groundwater. Additional investigation of deep soil, soil vapor and the shallow groundwater zone is needed to determine if any additional remediation of soil or groundwater is necessary. The Orange County Water District (OCWD) has been operating a containment extraction well downgradient of the former Aerojet Facility since Fall 2017. The effectiveness of this well at preventing migration of VOC impacted groundwater is currently being evaluated by the OCWD.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

exempt tier. Inspection was conducted with owner Hector Salas. Facility generates waste water and filter cake that is hazardous for copper. The facility conducts treatment of the waste water which is disposed of to the sewer under permit. Facility sends approximately 50 gallons of hazardous waste (spent etch bath) per month to the treatment system. The filter cake is processed approximately once per year and hauled as a hazardous waste. The following documents are available for review: sanitation discharge permit, inspection log, operating instructions and treatment log. Secondary containment structures were observed to be dry.

Eval Date: 04-13-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Inspection was conducted with Jose Salas who gave permission to conduct the inspection. James Hendron (OCHCA) was also present at the inspection. Facility generates filter cake containing copper and waste tin and lead. The tin and lead are sent for recycling by Salvage One. Hazardous waste container was not labeled (see violation). A label was placed on the container at the inspection. This violation is abated and no further action is required. Facility sends the spent etchant through the treatment system. The sludge from the system is processed approximately once per year and the waste hauled at that time.

HI TECH SOLDER (Continued) **1008388697**

Manifests were available for review. Facility is assigned and using EPA ID# CAR000163709. Facility s number is inactive per DTSC website. Discussed this with the operator. Mr. Salas states that they recently sent information to reactivate their number. Please note, facility s hazardous waste hauler has [Truncated]

Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site for the triennial Spill Prevention Control and Countermeasure (SPCC) inspection. Permission to inspect granted by Dusk Sheridan. The PE stamped SPCC was written in 10-2005. See violations. There is 1 fuel aboveground storage tank (AST) that has 2 compartments. 1 gasoline and 1 diesel. The AST is double walled and has a tertiary containment concrete berm. Overfill prevention (OFP) is electronic and leak detection is also electronic. ***the AST meets secondary containment requirements however, the berm is open to the environment. Any rainwater will be released to the storm drain. It is recommended that the berm have a plug installed in order to prohibit any petroleum/rainwater releases.*** There is 1 250 gallon waste oil AST, secondarily contained with visual OFP. There are 3 110 gallon new oil ASTs that are in a "bathtub" style secondary containment with a roof covering. There are 4 55 gallon drums of oil, fuel and ATf that are on secondary [Truncated]

Site ID: 545410
Site Name: United Rentals Inc Branch 515
Violation Date: 12-14-2012
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: Food wrappers found accumulated behind shop building. Failure to use best conventional technology to clean litter and spilled cement mix.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-14-2012
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Weather: cold and overcast. SWPPP dated 9/2005. Small low opening in block wall at SW portion appears to allow undocumented runon. Contact also reports undocumented runon from SE portion. Observed aggregate mix spilled over and around push walls of the agg bin; dry cement mix on ground around the batch plant mixing/loading area; Contact reports spilled mix is allowed to remain on ground and is removed when it is added to the load of the next truck. Contact reports that keeping the

UNITED RENTALS INC BRANCH 515 (Continued) **S103627799**

batch plant area cleaner would be impractical. Food wrappers observed behind shop building; Contact agreed to clean. Openings observed in roof over wash fluid shed; may allow water into the wash fluid secondary containment pallets.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS,

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

WINONICS INC DBA BENCH 2 BENCH (Continued) **1015732651**

transported off-site.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 92953
Site Name: ARCO 42122
Violation Date: 04-23-2020
Citation: HSC 6.7 25291(a)(2) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(2)
Violation Description: Failure to maintain secondary containment (e.g., failure of secondary containment testing).
Violation Notes: Returned to compliance on 05/22/2020. Witnessed passing post-repair test on UDC #9/10.
Violation Division: Fullerton City Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 92953
Site Name: ARCO 42122
Violation Date: 04-20-2015
Citation: 23 CCR 16 2711(a)(8) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2711(a)(8)
Violation Description: Failure to submit, obtain approval, or maintain a complete/accurate plot plan.
Violation Notes: Returned to compliance on 06/08/2015. Monitoring plot failed to show sensor locations.
Violation Division: Fullerton City Fire Department
Violation Program: UST
Violation Source: CERS,

Site ID: 92953
Site Name: ARCO 42122
Violation Date: 07-22-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 07/22/2016. The facility had (2) 55 gallon drums of HW. The solid waste drum was properly labeled. The liquid waste drum was labeled but did not have the beginning accumulation date. The date was added during the inspection. Abate the violation.

Citation: 23 CCR 16 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(1)
Violation Description: Failure of the double wall pressurized piping in the under dispenser containment to be continuously monitored by a method that either shuts down the flow of product to the dispenser or activates an audible/visual alarm when a leak is detected.

THRIFTY OIL #303/ ARCO 9677 (Continued) **S101589654**

Violation Notes:	Returned to compliance on 04/06/2016. Stand-alone VR 001 sensors in all UDC's except #13/14 failed to shut down dispensers until nozzle was hung up. Additionally, a bad hook signal in dispensers #3/4 and #5/6 prevented testing of 87 and 91 PLLD's because the turbines wouldn't shut down. Permission to conduct emergency repairs was given at time of inspection. Plans received 4/6/16. Sensors in 87/91 UDC's (i.e. all except diesel dispenser #13/14) replaced with 208's and programmed for positive shutdown. Testing of new sensors and 87/91 PLLD's witnessed by this agency 4/6/16.

Latitude:	33.8647432
Longitude:	-117.8879772
Case Type:	Cleanup Program Site
Case Worker:	MG
Local Agency:	Not reported
RB Case Number:	2080022
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History:	Arconic (formerly Alcoa) manufactures fastners for the aerospace industry. Investigation of the Site began in 1996 and found metals, petroleum hydrocarbons and VOCs (PCE, TCE, cis-1,2-DCE , 11DCE) in the soil and soil vapor. The primary areas of concern are the former degreaser area and the plating area. Four groundwater monitoring wells were installed at the Site between 2003 and 2005. Groundwater was encounterd at 106 to 108 feet bgs. VOCs PCE and TCE were detected in the groundwater at concentrations as high as 99 ug/L and 41 ug/L respectively . The groundwater flow direction is to the south southwest. A soil vapor extraction (SVE) and treatment pilot test operated between January 2007 to January 2008. The full scale SVE and treatment system was installed and operational May 6, 2009. The SVE system consists of seven vapor extraction wells and the extracted soil vapors are treated wtih carbon filters. Groundwater is monitored semiannually.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Region: STATE
Facility Status: **Open - Site Assessment**
Status Date: 07/19/2019
Global Id: SLT8R2224000
Lead Agency: SANTA ANA RWQCB (REGION 8)
Lead Agency Case Number: 80001558
Latitude: 33.8588982524437
Longitude: -117.894413960297
Case Type: Cleanup Program Site
Case Worker: CAN
Local Agency: Not reported
RB Case Number: SLT8R222
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Not reported
Site History: The Site overlies the Orange County North Basin regional groundwater plume, a comingled plume with known contamination from VOCs and other contaminants. Historical subsurface investigations at the Site identified VOCs in soil and groundwater that match several of the compounds present in the regional groundwater plume. In March 2018, RWQCB submitted an Oversight Cost Reimbursement for Site Cleanup Program request to the Eddie R Fischer Revocable Trust to recover reasonable expenses for overseeing the investigation of illegal discharges, contaminated properties,and other unregulated releases that may adversely affect the State of Californias waters. RWQCB stated that available historical information indicates that waste discharges at the Site may have impacted, or threatened to impact, beneficial groundwater zones beneath the Site. RWQCB requested that the Eddie R Fischer Revocable Trust cooperate with additional Site investigation requirements to ascertain the nature and extent of Site impacts and potential contributions to regional groundwater impacts.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2)TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/20/2021
Date Data Arrived at EDR: 11/05/2021
Date Made Active in Reports: 11/29/2021
Number of Days to Update: 24

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/20/2021
Date Data Arrived at EDR: 11/05/2021

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/20/2021

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/20/2021

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

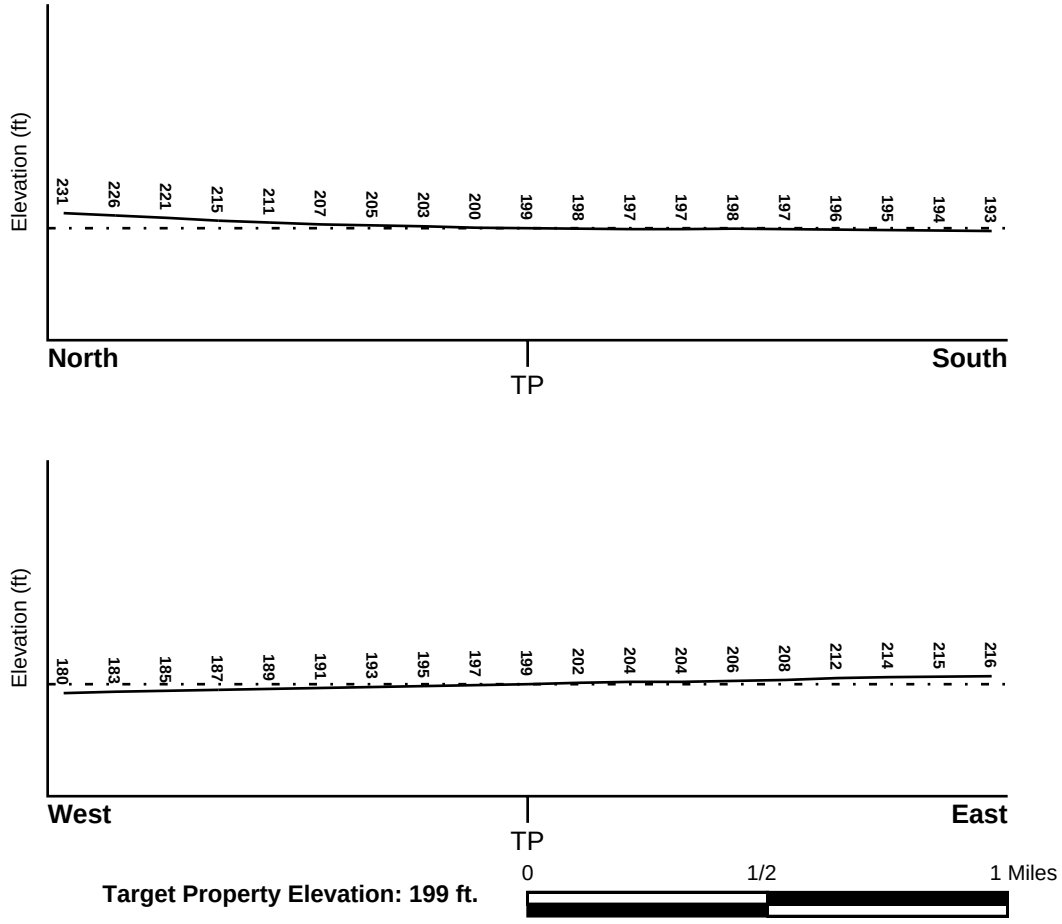

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0132J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1875F	FEMA FIRM Flood data

06059C0151J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
ANAHEIM	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: SAN EMIGDIO

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	7 inches	61 inches	stratified gravelly loamy coarse sand to very fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: MOCHO

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	31 inches	loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	31 inches	61 inches	loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: METZ

Soil Surface Texture: loamy sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
2	16 inches	62 inches	stratified sand to fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

APPENDIX C

USER QUESTIONNAIRE &
USER AND OCHCA EMAIL THREAD REGARDING SITE USE

USER
TRANSACATION SCREEN QUESTIONNAIRE
FOR PHASE I ENVIRONMENTAL SITE ASSESSMENT (ESA)

To qualify for one of the *Landowner Liability Protections (LLPs)*247 offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), 248 the *user* must conduct the following inquiries required by 40 C.F.R. §§ 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

Site Address: 777 West Orangethorpe Avenue, Placentia CA
Site APN(s): 339-112-27

(1.) Environmental liens that are filed or recorded against the subject property (40 C.F.R. § 312.25).

Did a search of land title records (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the subject property under federal, tribal, state, or local law?

NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records shall be searched for environmental liens and AULs.

Yes (No)

(2.) Activity and use limitations that are in place on the subject property or that have been filed or recorded against the subject property.

Did a search of land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the subject property and/or have been filed or recorded against the subject property under federal, tribal, state or local law?

Yes (No)

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 C.F.R. § 312.28).

Do you have any specialized knowledge or experience related to the subject property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the subject property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes (No)

(4.) Relationship of the purchase price to the fair market value of the subject property if it were not contaminated (40 C.F.R. § 312.29).

Does the purchase price being paid for this subject property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the subject property?

Yes (No)

(5.) Commonly known or reasonably ascertainable information about the subject property (40 C.F.R. § 312.30).

Are you aware of commonly known or reasonably ascertainable information about the subject property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the subject property? (Yes) / No

(b.) Do you know of specific chemicals that are present or once were present at the subject property? Yes / (No)

(c.) Do you know of spills or other chemical releases that have taken place at the subject property? Yes / (No)

(d.) Do you know of any environmental cleanups that have taken place at the subject property? (Yes) / No

(6.) The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation (40 C.F.R. § 312.31).

Based on your knowledge and experience related to the subject property, are there any obvious indicators that point to the presence or likely presence of releases at the subject property?

Yes (No)

Please provide details relating to any questions answered "yes" in the space provided. Attach additional sheets or informative documents if necessary:

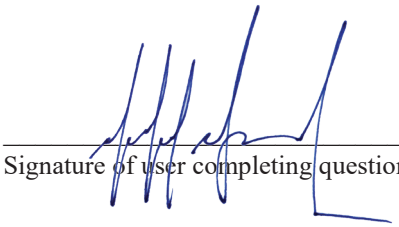

Brief review of GeoTracker

What is the purpose for which this Phase I ESA is being performed (example, sale, purchase, exchange, etc)?

Purchase

Good morning Peter,

When it comes to site closures and redevelopment, there are a number of factors that could dictate additional assessment. The project consultant should review the proposed development plans against the existing closure conditions and make the necessary recommendations to satisfy any applicable standards/requirements to move the project forward. Without knowing the proposed plans, it would be difficult to address any questions with specificity.

If the project consultant has any specific and technical questions, OC Environmental Health offers a consultation service ($184/hr.) with our site mitigation staff to assist the project consultant with the redevelopment projects. My site mitigation program supervisor Geniece Higgins is available at (714) 433-6423 to elaborate on our consultation services.

Please let me know if you have any other questions. Thank you.

Respectfully,

Darwin Cheng, JD, REHS

Thanks so much, Darwin, we greatly appreciate the quick response. Just to be sure we know what you need, can you share a bit more regarding your reference to certain conditions remaining in place?

Best,

Peter

Good afternoon Mr. Whittingham,

Thanks for reaching out to me. Our site mitigation staff is aware of this closure, and the current data presented can support for the mixed-use development so long as certain conditions remain in place. If Mr. Ganish has any questions or if the development involves any subsurface installation, I'd be happy to have our site mitigation staff reach out to him. Please let me know if you have any questions. Thanks!

Subject: RACC - 777 Orangethorpe, Placentia

Attention: This email originated from outside the County of Orange. Use caution when opening attachments or links.

Good afternoon, Mr. Cheng -

Chris Wangsaporn in Chairman Do's office suggested that I reach out to you on behalf of my client, Gilad Ganish, who is processing a development application in the City of Placentia.

Mr. Ganish has a Remedial Action Completion Certification on 777 Orangethorpe from July 2019 (attached). On Page 4 of the Certification, it states: "The site is currently developed for commercial use as auto dealership/service building. Site conditions should be reviewed if land use changes." This property is currently zoned for several uses including hotel and extended stay and will also soon be zoned

by the City to allow mixed-use projects at this location. We wanted to send you this quick email as our notification that Mr. Ganish will be changing the commercial use on the property to mixed-use.

Please let me know if you have any questions or concerns or if you require any additional information. Many thanks for your assistance.

Best,

Peter

JIB #3203

AGREEMENT TO ALTER WALL

This Agreement To Alter Wall ("Agreement") is made as of December 28, 1995, by and between Don-A-Vee Jeep-Eagle, Inc., a California corporation ("Don-A-Vee") and Foodmaker, Inc., a Delaware corporation ("Foodmaker").

WHEREAS, Don-A-Vee is the tenant and occupant of that certain real estate located at 777 W. Orangethorpe, Placentia, California (the "Don-A-Vee Property"); and

WHEREAS, Foodmaker is the tenant and occupant of the property located at 797 W. Orangethorpe, Placentia, California (the "Foodmaker Property"); and

WHEREAS, the Don-A-Vee Property and the Foodmaker Property share a common boundary and the Foodmaker Property is improved with a high block wall; and

WHEREAS, Don-A-Vee and Foodmaker believe that their respective businesses will be enhanced if the height of the wall is reduced to approximately 30" above the variable ground level; and

WHEREAS, Don-A-Vee is agreeable to contract and pay for the work necessary to reduce the size of the wall.

NOW, THEREFORE, in consideration of the mutual covenants and agreements contained in this Agreement, the parties hereto agree as follows:

Section 1. Location. The location of the wall is the north and east boundary of the Foodmaker Property and is depicted on Exhibit A attached hereto and incorporated herein by this reference.

Section 2. Alteration to the Wall; Landscaping. It is agreed that Don-A-Vee shall alter the existing wall to reduce its height to approximately 30" above the variable ground level.

In addition to the alteration necessary to reduce the height of the wall, Don-A-Vee hereby agrees to restore any damaged landscaping which currently improves the Foodmaker Property adjacent to the wall.

Section 3. License to Enter. For the purposes of altering the wall, Foodmaker licenses Don-A-Vee to enter onto the Foodmaker Property to make the necessary alterations and to perform any and all work reasonably necessary to carry out the intent of this Agreement. Such entry onto Foodmaker Property shall be scheduled with store manager to cause the least possible disruption to business.

Section 4. Materials and Workmanship. The alteration to the wall shall be performed in a workmanlike manner in conformity to the ordinances and regulations of the City of Placentia regulating such alterations, as they are in force at the time of the alterations. It is agreed that the alteration of the wall will be the removal of the top portion of the wall down to the height specified herein, and that the composition of the wall will not otherwise be changed.

In undertaking the alterations to the wall, Don-A-Vee shall not in any way disturb or affect that portion of the Foodmaker Property which is improved with a ventilation shaft and enclosure which has been placed upon the property to vent contaminated soil and is under the purview of the Orange County Health Care Agency.

Section 5. Cost of Alterations. Cost of alterations shall be borne solely by Don-A-Vee and Don-A-Vee agrees to indemnify and hold Foodmaker harmless from any cost or liability arising from the alterations to be made to the wall including, but not limited to any mechanic's and or materialman's liens and for any injury or death to persons and or damage to property caused by and occurring during the alterations, demolition, installation or other change to be made to the wall as contemplated hereby.

Section 6. Title to Wall and Properties. Nothing contained in this Agreement shall be construed as a conveyance of any title to the wall or to any property.

Section 7. Repairs and Maintenance. Upon completion of the alterations of the wall, Foodmaker licenses Don-A-Vee to paint, from time to time, that side of the wall which faces the Don-A-Vee Property, the color and quality of such paint to be selected by Don-A-Vee; provided, however, that during the period of such license Don-A-Vee shall also be responsible for all other maintenance and repairs necessary or appropriate to its side of the wall. Except as set forth herein, Foodmaker shall remain responsible for repairs and maintenance to the wall. Upon completion of any restoration of damaged landscaping which may be required pursuant to Section 2, each party shall be responsible for maintenance and restoration of their respective landscaping.

Section 8. Subsequent Restoration/Alterations. After the alteration of the wall is complete, Don-A-Vee shall have no obligation to restore the wall to its original configuration. This Agreement and/or Don-A-Vee's reliance hereon, including but not limited to the expenditure of substantial expense in completing the alterations to the wall, shall not limited Foodmaker's right to make subsequent alterations to the wall, including increases to the height thereof which are not in violation of local codes or ordinances.

Section 9. Entire Agreement. This Agreement contains the entire

agreement between the parties relating to the alterations to be make to the wall. No oral representation or modification concerning this Agreement shall have any effect unless it is represented in a subsequent written instrument, signed by each party.

Section 10. Attorney's Fees. In the event of any controversy, claim or dispute between the parties arising out of or relating to this Agreement or its breach, the prevailing party shall be entitled to recover reasonable expenses, attorney's fees, and costs from the losing party.

Section 11. Binding Effect. This Agreement is personal to the parties hereto, both of whom are tenants. No license, duty or obligation created by this Agreement shall bind or enure to the benefit of the respective representatives, successors and assigns of the parties.

Section 12. Notices. Any notice required to be given by either party to this Agreement shall be given to the other party at the address shown below:

If to Don-A-Vee:	Don-A-Vee Jeep-Eagle, Inc. 777 W. Orangethorpe Avenue Placentia, CA 92670
Copy To:	Roland E. Camfield, Jr., Esq. CAMFIELD & CHRISTOPHER 801 No. Brand Boulevard, Suite 1080 Glendale, CA 91203-1243
If to Foodmaker:	Foodmaker, Inc. Real Estate/Legal Dept. 9330 Balboa Avenue San Diego, CA 92123-1516

Section 13. Headings and Captions. The title to this Agreement and the individual section headings and captions are for

convenience only and are not to be construed as definitions of the intent of the parties.

Section 14. California Law. This Agreement shall be governed by and construed in accordance with the laws of the State of California.

IN WITNESS WHEREOF, the parties have executed this Agreement as of the date first above written.

OWNER-BUILDER VERIFICATION

Attention Property Owner:

An 'owner-builder' building permit has been applied for in your name and bearing your signature.

Please complete and return this information in the envelope provided at your earliest opportunity to avoid unnecessary delay in processing and issuing your building permit. No building permit will be issued until this verification is received.

1. I personally plan to provide the major labor and materials for construction of the proposed property improvement (yes or no) _____.
2. I (have/have not) _____ signed an application for a building permit for the proposed work.
3. I have contracted with the following person (firm) to provide the proposed construction:
   Name _____
   Address _____ City _____
   Phone _____ Contractor's License No. _____
4. I plan to provide portions of the work, but I have hired the following person to coordinate, supervise, and provide the major work:
   Name _____
   Address _____ City _____
   Phone _____ Contractor's License No. _____
5. I will provide some of the work but I have contracted (hired) the following persons to provide the work indicated:

Name	Address	Phone	Type of Work

Signed: Property Owner _____
Address _____
Social Security Number _____
Date _____

AFFIDAVIT

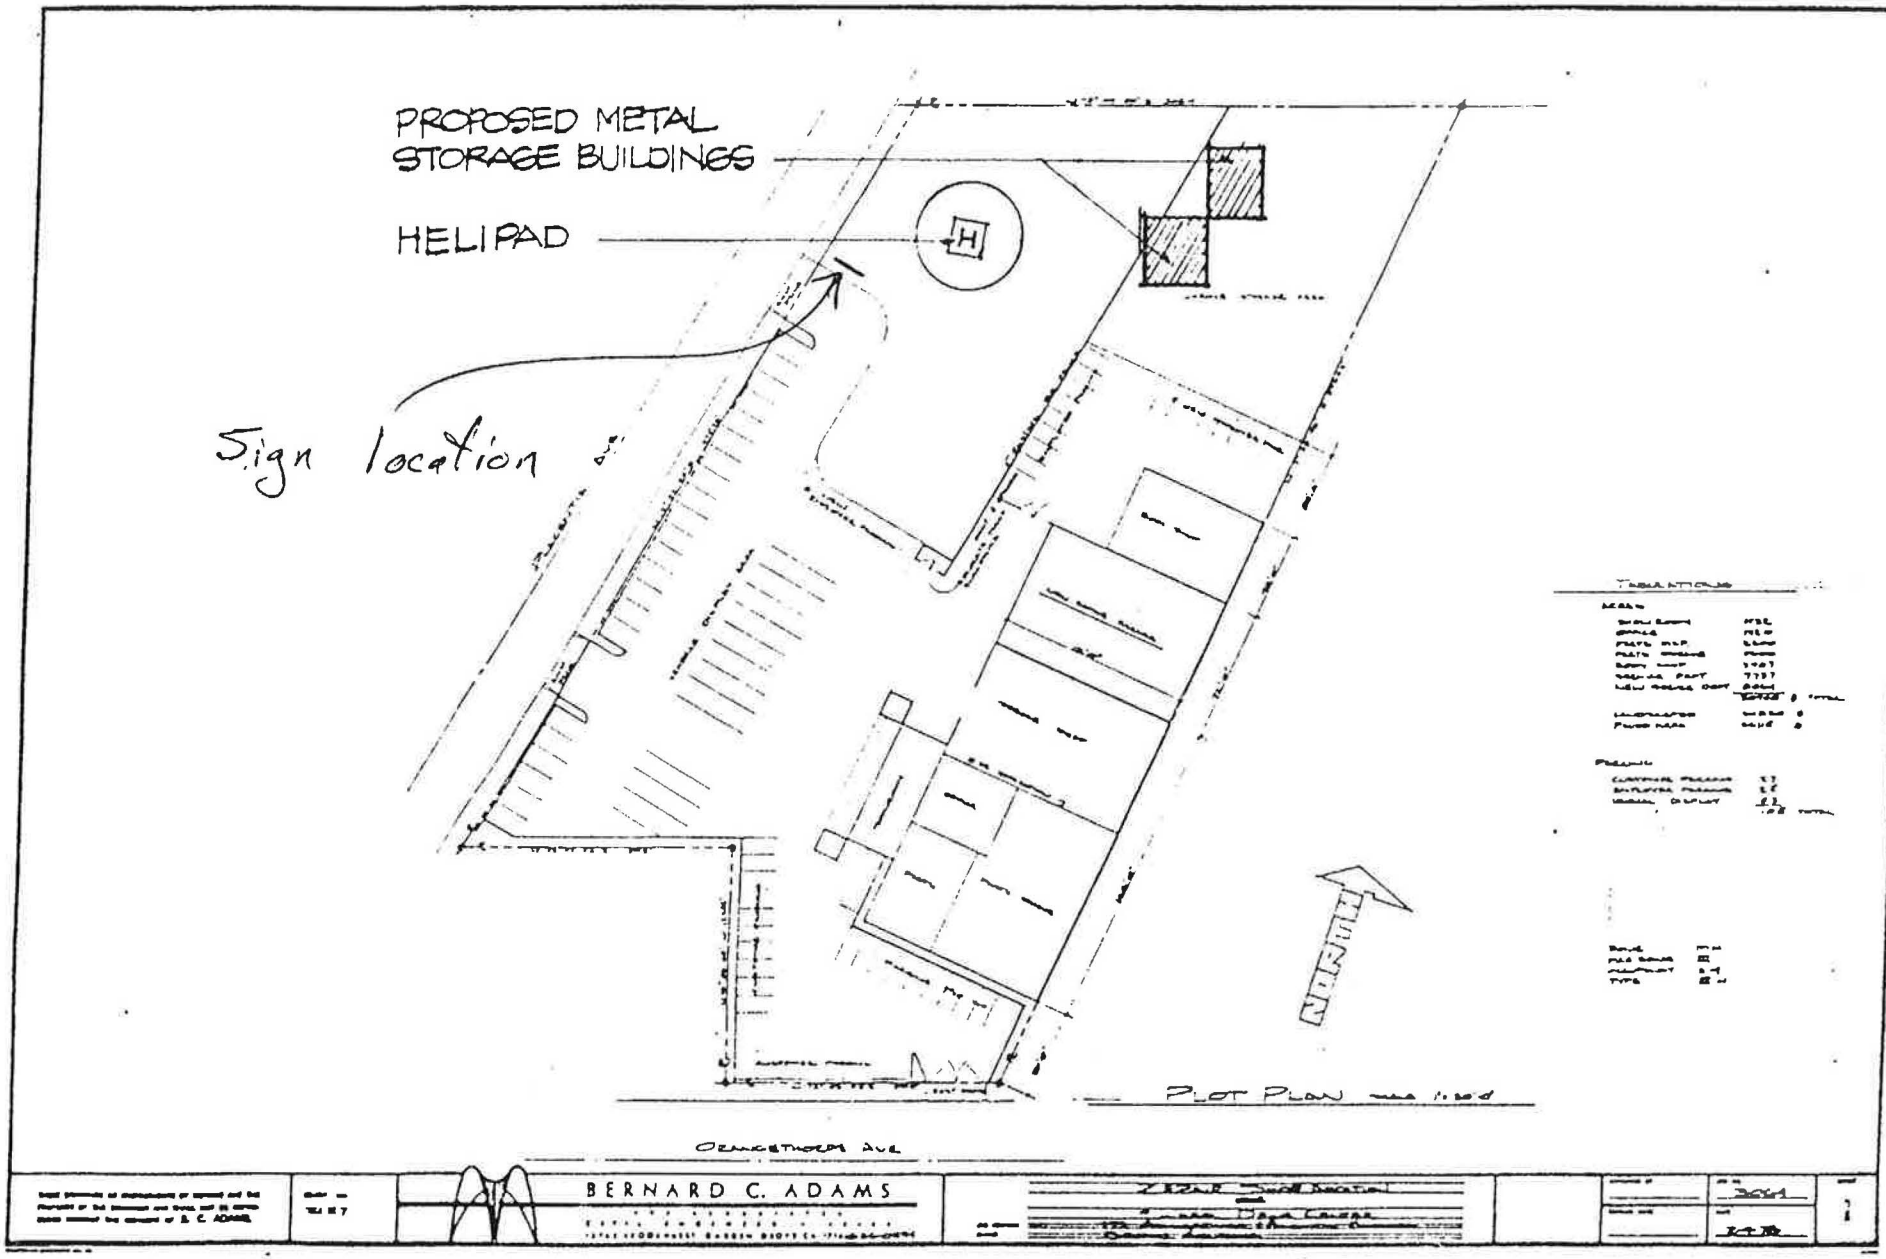

I certify that in the performance of the work for which this permit is issued I shall not employ any person in any manner so as to become subject to the Workmen's Compensation laws of California.

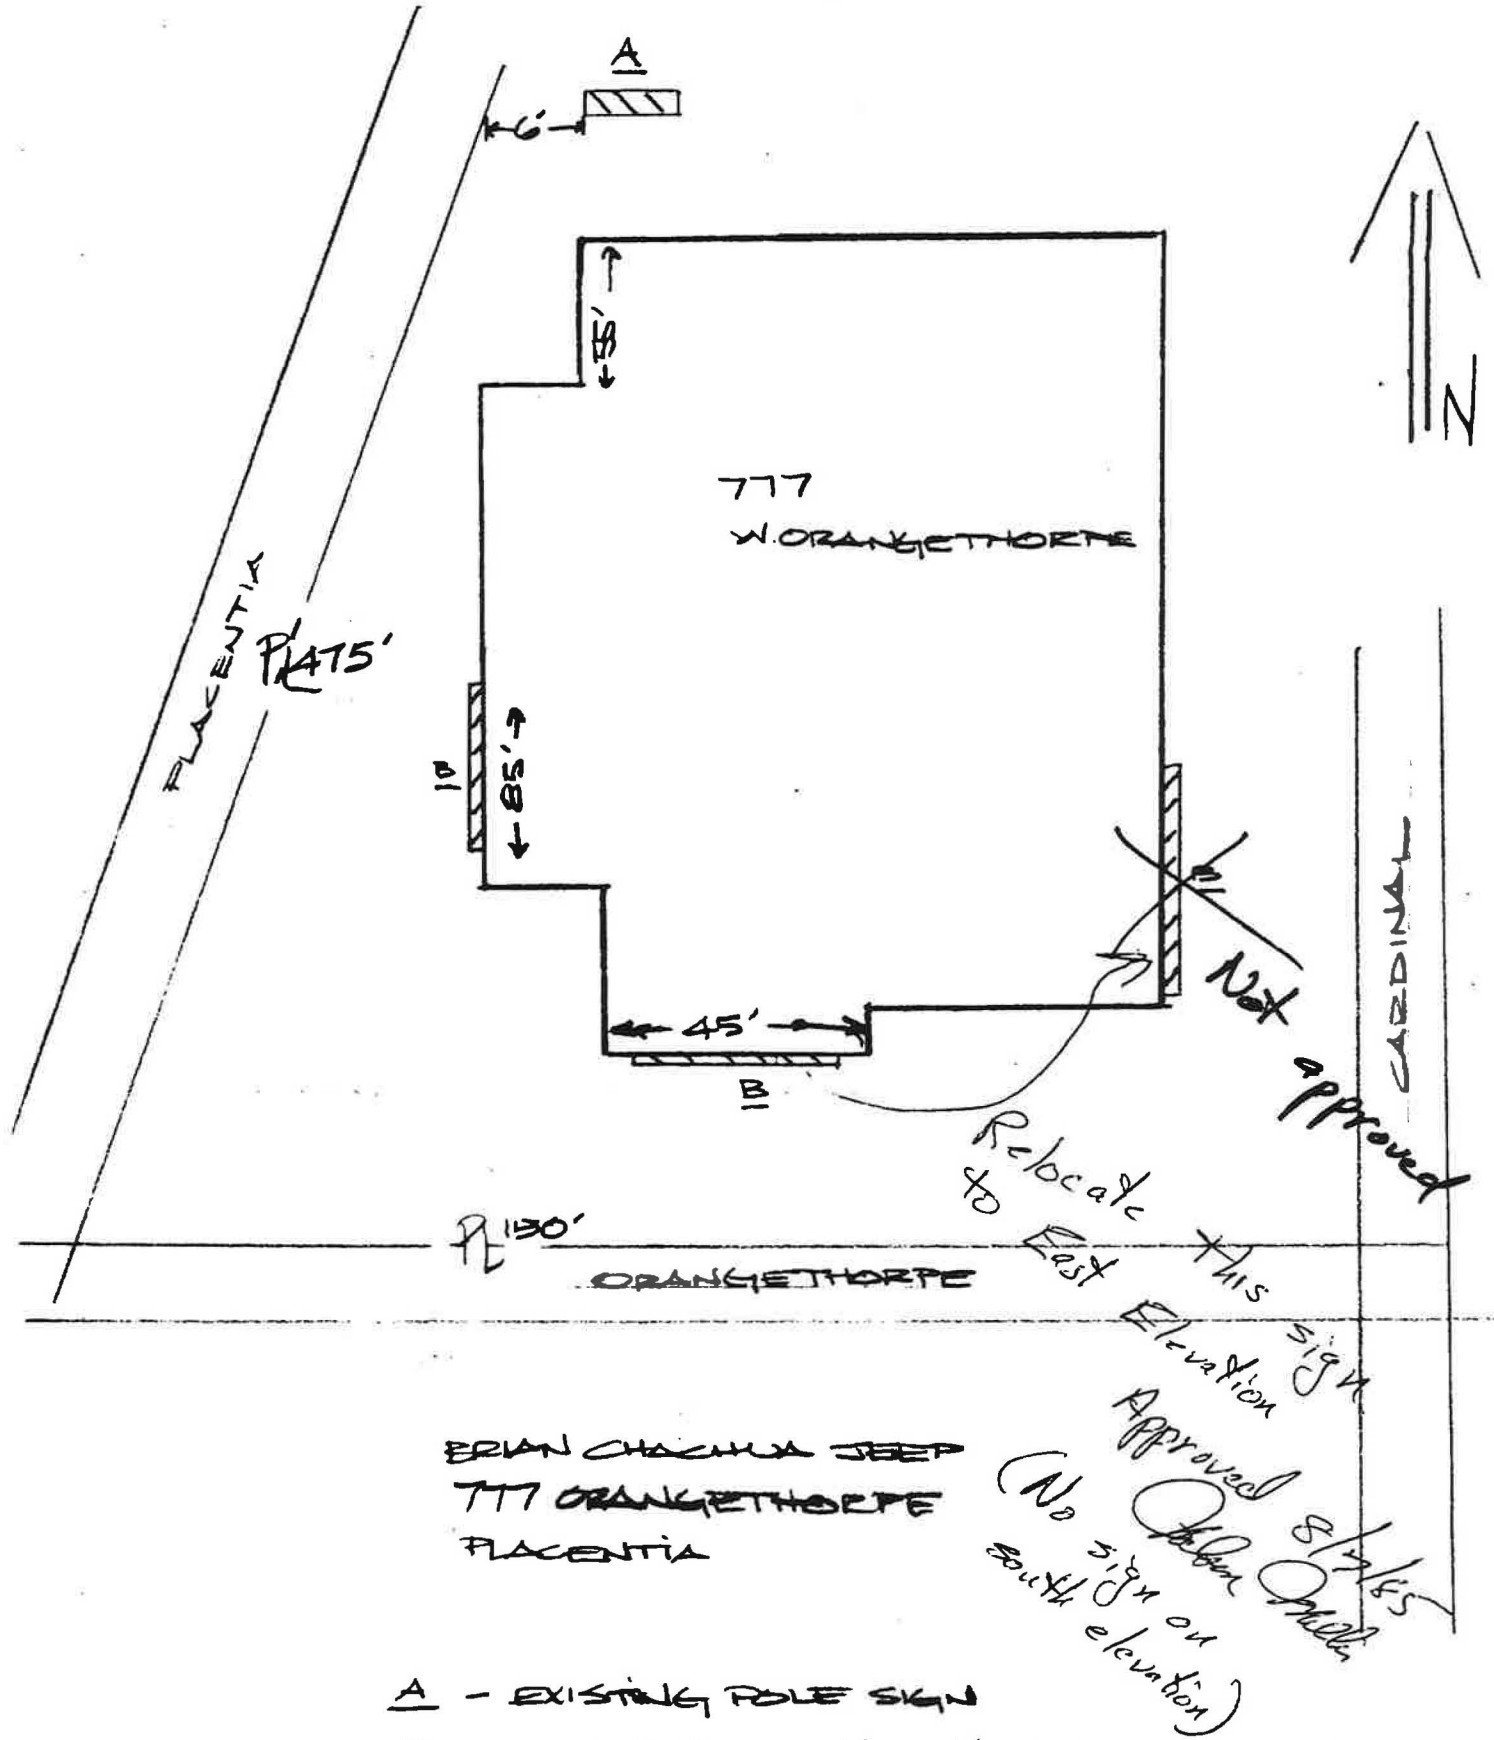

Permit No.(s) _____ Job Location _____

I declare under penalty of perjury, that the foregoing is true and correct.

This application becomes a valid permit for work as listed hereon when properly filled out, signed and machine validated to the correct permit fee in the validation space below. Permission is therefore granted to do such work as indicated in this application, in accordance with, and subject to, all the applicable provisions of Title 20 (Building) and the Title 23 (Zoning) of the Placentia Municipal Code and all other applicable City and State laws.

This permit becomes null and void if work is not commenced within 180 days from the date of issuance, or if work is suspended at any time during construction for more than 180 days, or if any work is done on the said building or structure in violation of any City ordinance or State law relating thereto.

OWNER-BUILDER VERIFICATION

Attention Property Owner:

An 'owner-builder' building permit has been applied for in your name and bearing your signature.

Please complete and return this information in the envelope provided at your earliest opportunity to avoid unnecessary delay in processing and issuing your building permit. No building permit will be issued until this verification is received.

1. I personally plan to provide the major labor and materials for construction of the proposed property improvement (yes or no) _____.
2. I (have/have not) _____ signed an application for a building permit for the proposed work.
3. I have contracted with the following person (firm) to provide the proposed construction:
   Name _____
   Address _____ City _____
   Phone _____ Contractor's License No. _____
4. I plan to provide portions of the work, but I have hired the following person to coordinate, supervise, and provide the major work:
   Name _____
   Address _____ City _____
   Phone _____ Contractor's License No. _____
5. I will provide some of the work but I have contracted (hired) the following persons to provide the work indicated:

Name	Address	Phone	Type of Work

Signed: Property Owner _____
Address _____
Social Security Number _____
Date _____

AFFIDAVIT

I certify that in the performance of the work for which this permit is issued I shall not employ any person in any manner so as to become subject to the Workmen's Compensation laws of California.

Permit No.(s) _____ Job Location _____

I declare under penalty of perjury, that the foregoing is true and correct.

Executed on _____ at Placentia, California

_____
Signature of Applicant (Print Name Here)

Form **W-9**
(Rev. October 2018)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

▶ **Go to *www.irs.gov/FormW9* for instructions and the latest information.**

Give Form to the requester. Do not send to the IRS.

Print or type. See Specific Instructions on page 3.

1 Name (as shown on your income tax return). Name is required on this line; do not leave this line blank.

Alta Planning + Design, Inc.

2 Business name/disregarded entity name, if different from above

3 Check appropriate box for federal tax classification of the person whose name is entered on line 1. Check only **one** of the following seven boxes.

☐ Individual/sole proprietor or single-member LLC ☑ C Corporation ☐ S Corporation ☐ Partnership ☐ Trust/estate

☐ Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=Partnership) ▶ _____

Note: Check the appropriate box in the line above for the tax classification of the single-member owner. Do not check LLC if the LLC is classified as a single-member LLC that is disregarded from the owner unless the owner of the LLC is another LLC that is **not** disregarded from the owner for U.S. federal tax purposes. Otherwise, a single-member LLC that is disregarded from the owner should check the appropriate box for the tax classification of its owner.

☐ Other (see instructions) ▶

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any) _____

Exemption from FATCA reporting code (if any) _____

(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.

711 SE Grand Avenue

Requester's name and address (optional)

6 City, state, and ZIP code

Portland, OR 97214

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number

			–			–				

or

Employer identification number

6	8	–	0	4	6	5	5	5	5

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

Sign Here Signature of U.S. person ▶ _____ Date ▶ 1/3/2020

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

PERMIT CONDITIONS

Liquefied Petroleum Gas

DATE: July 2011 **PC014**

LP-gas, including butane, butane and air mixtures, and propane gas was the type of material first ignited in an estimated national annual average of 620 structure fires in properties other than homes between 2000-2004. These fires resulted in an estimated 7 civilian deaths, 63 civilian fire injuries, and $26 million in direct property damage. The following conditions are intended to ensure safe storage and use of LPG while mitigating the risk of unintentional ignition.

☐ Vertical Tank _____ Size ☐ Horizontal Tank 8 Size

Conditions

- ☑ This site has been approved for 16 gallons.
- ☐ Smoking, open flames, and other sources of ignition are prohibited within 25' of filling operations.
- ☐ No Smoking signs shall be posted when required by the fire code official.
- ☐ Weeds, grass, brush, trash, and other combustibles must be kept at least 10' away from all LP-gas tanks.
- ☐ Mechanical and electrical emergency shutdown devices are to remain labeled and functional at all times.
- ☑ All authorized personnel shall complete appropriate training prior to use.
- ☐ Tank and piping is to be inspected annually by qualified personnel.
- ☑ All required signage shall be maintained as legible.
- ☑ Tank identification labeling shall remain legible at all times.
- ☐ Where exposed to vehicular damage, LP-gas containers, regulators, and piping shall be protected in accordance with the vehicle impact protection requirements.
- ☐ A 40BC fire extinguisher shall be maintained within 30' of an LP-gas dispensing site. Such extinguishers shall be serviced once a year.

Attention: Tony Riniti
Fire Safety Specialist
Fire Prevention Division

Dear Mr. Riniti,

We wish to thank you for the opportunity of reviewing the operation and safety features of our Model V3 Vapor Extraction System at Brian Chuchua Jeep yesterday.

We trust that if you have any questions on the Safety Analysis or Operation and Maintenance Manual, which I gave to you, that you will contact us at your convenience.

Again. thank you for your interest.

Very truly yours,

James D. Davis

INTRODUCTION:
This document identifies the specific permits being issued to your facility/building in accordance with the codes adopted by Orange County Fire Authority and their partner jurisdictions. Any error or omission should not be considered as permission to violate any specific provisions of the adopted codes or any other legally enforceable regulation(s). Any deviation(s) from permit conditions or increase in quantity of the materials allowed may result in revocation of this permit.

For the specific permit conditions please visit our web site at WWW.OCFA.ORG

PERMIT CONDITIONS

Repair Garage

DATE: July 2011 **PC01**

Repair garages have the potential for causing injury, death, and property damage due to the amount of combustible materials within the facility, including gasoline, oil, cleaning fluids, oily rags, and numerous ignition sources. Household maintenance of the facility and controlling the ignition sources will mitigate the hazard, and the following conditions will reduce the risk of a fire within the repair garage.

Conditions

- [x] Smoking shall not be permitted.
- [x] Oily rags shall be discarded in approved, self-closing metal containers.
- [x] Appliances and equipment that generate a glow, spark, or flame capable of igniting flammable vapors shall not be installed or used within 18" of the floor in the repair garage.
- [ ] Repair garages used for the repair of natural gas- or hydrogen-fueled vehicles shall be provided with an approved mechanical ventilation system, and shall have an approved gas-detection system. Such systems shall be maintained operational at all times.

Hot Works

DATE: July 2011 **PC012**

In 2003-2006, there were an estimated 5,600 structure fires per year reported to U.S. fire departments, with associated annual losses of 22 civilian deaths, 223 civilian injuries, and $208 million in direct property damage due to welding, soldering, torches, and other open-flame devices. Data shows that lack of equipment and household maintenance, failure to use protective materials, and improper practices contributed to the majority of fires. The following conditions of approval are designed to mitigate the hazard of open-flame operations.

Conditions

- ☐ Oxygen cylinders, fuel gas cylinders, and acetylene generators shall be placed far enough away from welding operations that they will not be unduly heated by radiation from heated materials, sparks, or misdirection of the torch flame.
- ☐ Portable oxygen/fuel gas welding equipment located inside of buildings shall be stored in a well-ventilated, dry location at least 20' from combustible material and away from elevators, stairs, gangways, or means of egress.
- ☐ Only approved equipment such as blowpipes, torches, regulators, and acetylene generators that have been examined, tested, and found to be safeguarded as completely as practical shall be used in welding operations.
- ☐ Cylinders, valves, hoses, and other apparatus and fittings containing or using oxygen shall be kept free from oil or grease. Oxygen cylinders and apparatus shall not be handled with oily hands, gloves, or greasy materials.
- ☐ Welding gas hoses shall be capable of withstanding hydrostatic pressures of 800 psi. Dual hoses joined by a web shall be distinguished by color (red/acetylene, green/oxygen) OR by touch/feel. Hoses that are taped together for convenience shall not be covered by tape for more than 4" out of every 8" of length. Hoses shall be inspected frequently for damage, tears, burns, etc. When damage is discovered, the hose shall be subjected to a test of at least twice its normal operating pressure but not less than 200 psi. Damaged hose shall be discarded.
- ☐ Welding shall not be performed in or near rooms or locations where flammable liquids or vapors, lint, dust, or loose combustible stocks are located or arranged such that sparks could cause ignition or explosion of such materials.
- ☐ **Maintain a fire watch for at least 30 minutes following a welding operation.** Keep a fire extinguisher with a minimum rating of 2A:20BC within 30' of the welding area.
- ☐ A switch or circuit breaker shall be provided so that fixed electric welders and control equipment can be disconnected from the supply circuit. The disconnect shall be marked EMERGENCY DISCONNECT and shall be visible from the equipment.
- ☐ Keep compressed gas cylinders secured to maintain an upright position.
- ☐ All compressed gas cylinders shall be stored away from exits.
- ☐ All compressed gas cylinders shall be clearly labeled with the chemical name and hazard classes of the material.
- ☐ Cylinders containing flammable gases shall be stored, used, and handled in accordance with nationally recognized good practice.

☐ Markings used for piping systems shall consist of the content name and include an arrow indicating direction of flow.

☒ Combustible material shall be kept a minimum of 10' from cylinders.

FIRE AND LIFE SAFETY INSPECTION SERVICE
ORANGE COUNTY FIRE AUTHORITY

Page 1 of 1 | P.O. Box 57115, Irvine, CA 92619 | Inspector I.D.# 4439
Inspection No _____ | (714) 573-6000 | Unit/Shift STEC ON. 1

In a effort to assist property and/or business owners in protecting their investment, a fire and life safety inspection was conducted at 777 ORANGETHORPE | 738 HUNDAY DON A VEH JEEP on ____. At the time of inspection, the following was discovered:

BOX(ES) THAT ARE CHECKED ☒ INDICATE THOSE ITEM(S) THAT NEED YOUR ATTENTION.

ACCESS: Can the Firefighters locate and make access to your property? ☐ Yes ☐ No

- ☐ Address numbers shall be visible from the addressed street. Minimum 6" in height and attached to a contrasting background.
- ☐ Fire lanes – fire lanes shall be posted properly and maintained clear of vehicles and obstructions. Fire lanes should be identified according to OCFA standards.
- ☐ Fire protection equipment – maintain access to all fire protection equipment including: hydrants, fire department connections, sprinkler and standpipe valves, fire alarm equipment.
- ☐ Maintain 30 inch clearance from all electrical panels.

EGRESS: Can the occupants safely exit the building in the event of an emergency? ☐ Yes ☐ No

- ☐ Hardware – doors ~~equipped with panic hardware~~ shall remain free of other locks or latches.
- ☐ Remove storage and obstructions from exits, aisles, corridors, and stairways.
- ☐ Unlock all exit doors when the building or area it services is occupied.
- ☑ Maintain (illuminated) exit signs and exitway lighting.
- ☐ Area assigned for occupant discharge shall be maintained unobstructed and clear of storage.

FIRE PROTECTION INSTALLATIONS: Are built-in fire protection systems in service and maintained? ☐ Yes ☐ No

- ☐ Remove obstruction(s), decoration(s) or other items interfering with proper operation of sprinkler system.
- ☐ Replace damaged, corroded, or painted sprinkler heads.
- ☐ Provide spare sprinkler heads (6 minimum) and sprinkler wrench.
- ☐ Identify sprinkler control valves and secure in open position.
- ☐ Service and tag (by State Licensee) automatic fire extinguishing and standpipe systems a minimum of every 5 years or as required.
- ☐ Service and tag (by State Licensee) hood and duct extinguishing system over cooking equipment semi- annually and after use..
- ☐ Service and maintain in proper working order the automatic fire alarm system.

☐ **NO VIOLATIONS FOUND**

HOUSEKEEPING: Are materials and waste properly handled and stored? ☐ Yes ☐ No

- ☐ Remove or store rubbish, waste material, and oily rags in closed metal containers.
- ☐ Clean grease filters and hood and duct system over cooking appliances as necessary.
- ☐ Discontinue use of extension cords in lieu of permanent wiring.

STORAGE: Is storage arranged in a manner that allows for access and egress? ☐ Yes ☐ No

- ☐ Arrange storage in orderly manner and provide for exiting and fire department access.
- ☐ Remove storage to 18 inches below level of sprinklers (36 inches when storage is piled over 12 feet high).
- ☐ Reduce storage height to at least 2 feet or more below ceiling in non-sprinklered areas.
- ☐ Provide clearance between heat producing appliances and combustible materials.

FIRE SEPARATIONS: Are fire protection features of the building being maintained? ☐ Yes ☐ No

- ☐ Remove obstruction(s), and alterations to fire doors and maintain closing and latching devices.
- ☐ Remove wedges or any other unapproved means used to hold self-closing doors open .
- ☐ Maintain or repair all fire walls and draft stops.

FIRE AND LIFE SAFETY INSPECTION SERVICE

ORANGE COUNTY FIRE AUTHORITY

Page 1 of 1
Inspection No 116958

Safety & Environmental Services
1 Fire Authority Road, Irvine, CA 92619
(714) 573-6000

Inspector I.D.# 3025
Unit/Shift Prev 13

In a effort to assist property and/or business owners in protecting their investment, a fire and life safety inspection was conducted at 777 W Address Orangethorpe / Jimmy Chs DBA: Jeep of [illegible] on 12/16/16. At the time of inspection, the following was discovered:

BOX(ES) THAT ARE CHECKED ☒ INDICATE VIOLATION(S) OF THE CALIFORNIA FIRE CODE.

ACCESS: Can the Fire Dept. locate and make access to your property? ☐ Yes ☐ No

- ☐ Address numbers shall be visible from the addressed street. Minimum 6" in height and attached to a contrasting background.
- ☐ Fire lanes – fire lanes shall be posted properly and maintained clear of vehicles and obstructions. Fire lanes should be identified according to OCFA standards.
- ☐ Fire protection equipment – maintain access to all fire protection equipment including: hydrants, fire department connections, sprinkler and standpipe valves and fire alarm equipment.
- ☐ Maintain 30 inch clearance from all electrical panels.

EGRESS: Can the occupants safely exit the building in the event of an emergency? ☐ Yes ☐ No

- ☐ Hardware – doors equipped with panic hardware shall remain free of other locks or latches.
- ☐ Remove storage and obstructions from exits, aisles, corridors, and stairways.
- ☐ Unlock all exit doors when the building or area it services is occupied.
- ☐ Maintain (illuminated) exit signs and means of egress lighting.
- ☐ Area assigned for occupant discharge shall be maintained unobstructed and clear of storage.

FIRE PROTECTION INSTALLATIONS: Are built-in fire protection systems in service and maintained? ☐ Yes ☐ No

- ☐ Remove obstruction(s), decoration(s) or other items interfering with proper operation of sprinkler system.
- ☐ Replace damaged, corroded, or painted sprinkler heads.
- ☐ Provide spare sprinkler heads (6 minimum) and sprinkler wrench.
- ☐ Identify sprinkler control valves and secure in open position.
- ☐ Service and tag (by State Licensee) automatic fire extinguishing and standpipe systems a minimum of every 5 years or as required.
- ☐ Service and tag (by State Licensee) hood and duct extinguishing system over cooking equipment semi- annually and after use..
- ☐ Service and maintain in proper working order the automatic fire alarm system.

☐ **NO VIOLATIONS FOUND**

HOUSEKEEPING: Are materials and waste properly handled and stored? ☐ Yes ☐ No

- ☐ Remove or store rubbish, waste material, and oily rags in closed metal containers.
- ☐ Clean grease filters and hood and duct system over cooking appliances as necessary.
- ☐ Discontinue use of extension cords in lieu of permanent wiring.

STORAGE: Is storage arranged in a manner that allows for access and egress? ☐ Yes ☐ No

- ☐ Arrange storage in orderly manner and provide for exiting and fire department access.
- ☐ Remove storage to 18 inches below level of sprinklers (36 inches when storage is piled over 12 feet high).
- ☐ Reduce storage height to at least 2 feet or more below ceiling in non-sprinklered areas.
- ☐ Provide clearance between heat producing appliances and combustible materials.

FIRE SEPARATIONS: Are fire protection features of the building being maintained? ☐ Yes ☐ No

- ☐ Remove obstruction(s), and alterations to fire doors and maintain closing and latching devices.
- ☐ Remove wedges or any other unapproved means used to hold self-closing doors open .
- ☐ Maintain or repair all fire walls and draft stops.

FIRE EXTINGUISHERS: Are fire extinguishers accessible, in service and maintained? ☐ Yes ☐ No

- ☐ Provide _____ extinguisher(s) of a 2-A:10-BC minimum rating.
- ☐ Mount extinguisher(s) where readily available, keeping the top of the extinguisher NO higher than 5 feet and NOT less than 3 feet with no more than 75 feet travel distance.
- ☐ Post signs indicating location where extinguishers are not readily visible.
- ☐ Service (by State licensee) each extinguisher every six years or after use.

PERMITS: Are permit(s) required? ☐ Yes ☐ No

- ☐ Existing permits should comply with conditions found on permit application.
- ☐ New permit(s) are required. A Fire Inspector will contact you regarding the requirements.

☐ **FIRE INSPECTION COMPLETED/ VIOLATIONS CLEARED**

THE CHECKED ITEMS ABOVE ARE VIOLATIONS OF THE CALIFORNIA FIRE CODE (SEE REVERSE). MEASURES SHALL BE TAKEN IMMEDIATELY TO CORRECT ALL VIOLATIONS LISTED HEREIN. FAILURE TO COMPLY WITHIN THE SPECIFIED TIME WILL RESULT IN LEGAL ACTION.

ADDITIONAL COMMENTS AND/OR REQUIREMENTS:

Service and tag all 1 1/2" Doors and sliding Fire Doors. CFC

30 Days

REINSTATED DATE: [illegible]. IF YOU ARE UNABLE TO CORRECT THOSE ITEMS INDICATED ABOVE BY THE REINSPECTION DATE, CONTACT Doug Hunter (INSP. NAME) AT (PHONE) 714 [illegible] OR A REINSPECTION FEE WILL BE ASSESSED PER THE FEE SCHEDULE.

PLACENTIA, CA 92870

Lisa Wales, REHS
HAZARDOUS WASTE SPECIALIST III
(714) 559-0101
7:00-8:00 AM

On site for a routine hazardous waste inspection. Moe Jubran consented to the inspection. Observed facility and inspected hazardous waste storage areas.

Facility generates the following hazardous wastes: used oil, used oil filters (metal and non-metal), waste coolant, waste gasoline and parts washer waste.

Containers of hazardous waste were stored closed and properly labeled. A faded label for the non-metal waste filters was touched up during the inspection.

Manifests were available for review. Facility is currently assigned and used active EPA ID Number CAL000395777.

Emergency information is posted. Inspected perimeter of facility and found no evidence of hazardous waste run-off.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**Yes**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**
Does your facility own or operate ASTs above these thresholds? Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	**No**
Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID # | | |

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions; and, preventing and mitigating associated harm to persons, property, and the environment.) D1.

- [x] 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- [ ] 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- [x] 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- [x] 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- [ ] 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- [ ] 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- [x] 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- [x] 8. STOP PROCESSES AND/OR OPERATIONS;
- [x] 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- [x] 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- [x] 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- [x] 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- [x] 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- [x] 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- [x] 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- [x] 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- [x] 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- [x] 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- [x] 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- [x] 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- [ ] 21. OTHER (Specify): D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- [ ] 1. BELLS;
- [x] 2. HORNS/SIRENS;
- [x] 3. VERBAL (I.E., SHOUTING);
- [ ] 4. OTHER (Specify): E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

In the front area of the sales lot NW of Placentia Blvd.

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation.

[x] EVACUATION ROUTE MAP(S) POSTED AS REQUIRED E4.

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following) F1.

- [x] 1. HAVE BEEN DETERMINED NOT NECESSARY; *or*
- [ ] 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): F2.

G. EMERGENCY EQUIPMENT

Check all boxes that apply to list emergency response equipment available at the facility and identify the location(s) where the equipment is kept and the equipment's capability, if applicable. [e.g., ☒ CHEMICAL PROTECTIVE GLOVES | Spill response kit | One time use, Oil & solvent resistant only.]

TYPE	EQUIPMENT AVAILABLE G1.	LOCATION	CAPABILITY *(if applicable)*
Safety and First Aid	1. ☐ CHEMICAL PROTECTIVE SUITS, APRONS, OR VESTS	G2.	G3.
	2. ☑ CHEMICAL PROTECTIVE GLOVES	G4. Shop	G5.
	3. ☐ CHEMICAL PROTECTIVE BOOTS	G6.	G7.
	4. ☑ SAFETY GLASSES / GOGGLES / SHIELDS	G8. Shop	G9.

	35. ☐ OTHER	G70.	G71.

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases / spills due to earthquake-related motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS: (Check all that apply) H1.	LOCATIONS (e.g., shop, outdoor shed, forensic lab)
☑ 1. HAZARDOUS MATERIALS / WASTE STORAGE AREA	Parts & Service H2.
☐ 2. PROCESS LINES / PIPING	H3.
☐ 3. LABORATORY	H4.
☐ 4. WASTE TREATMENT AREA	H5.

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS: (Check all that apply) H6.	LOCATIONS
☑ 1. SHELVES, CABINETS AND RACKS	Parts & Service H7.
☑ 2. TANKS (EMERGENCY SHUTOFF)	Service Shop H8.
☐ 3. PORTABLE GAS CYLINDERS	H9.
☐ 4. EMERGENCY SHUTOFF AND/OR UTILITY VALVES	H10.
☐ 5. SPRINKLER SYSTEMS	H11.
☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane dispensing tank)	H12.

I. EMPLOYEE TRAINING

Explanation of Requirement: Employee training is required for all employees handling hazardous materials and hazardous wastes in day-to-day or clean-up operations including volunteers and/or contractors. Training must be:

- Provided within 6 months for new hires;
- Amended as necessary prior to change in process or work assignment;
- Given upon modification to the Emergency Response / Contingency Plan, and updated/refreshed annually for all employees.

Required content includes all of the following:

- Material Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Fire hazards of materials / processes;
- Conditions likely to worsen emergencies;
- Coordination of emergency response;
- Notification procedures;
- Applicable laws and regulations;
- Communication and alarm systems;
- Personal protective equipment;
- Use of emergency response equipment (e.g. Fire extinguishers, respirators, etc.);
- Decontamination procedures;
- Evacuation procedures;
- Control and containment procedures;
- UST monitoring system equipment and procedures (if applicable).

INDICATE HOW EMPLOYEE TRAINING PROGRAM IS ADMINISTERED (Check all that apply) I1.

☑ 1. FORMAL CLASSROOM; ☐ 2. VIDEOS; ☑ 3. SAFETY / TAILGATE MEETINGS;
☐ 4. STUDY GUIDES / MANUALS (Specify): I2.
☑ 5. OTHER (Specify): Through online courses provided by KPA Prior Safety Consulting Company I3.
☐ 6. NOT APPLICABLE BECAUSE FACILITY HAS NO EMPLOYEES

Large Quantity Generator (LQG) Training Records: Large quantity hazardous waste generators (i.e., who generate more than 2?0 gallons/1,000 kilograms of hazardous waste per month) must retain written documentation of employee hazardous waste management training sessions which includes:

- A written outline/agenda of the type and amount of both introductory and continuing training that will be given to persons filling each job position having responsibility for the management of hazardous waste (e.g., labeling, manifesting, compliance with accumulation time limits, etc.).
- The name, job title, and date of training for each hazardous waste management training session given to an employee filling such a job position; and
- A written job description for each of the above job positions that describes job duties and the skills, education, or other qualifications required of personnel assigned to the position.
- Current employee training records must be retained until closure of the facility.
- Former employee training records must be retained at least three years after termination of employment.

J. LIST OF ATTACHMENTS

(Check one of the following) J1.

☑ 1. NO ATTACHMENTS ARE REQUIRED; *or*
☐ 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

K. SIGNATURE / CERTIFICATION

CONSOLIDATED EMERGENCY RESPONSE / CONTINGENCY PLAN

Prior to completing this Plan, please refer to the INSTRUCTIONS FOR COMPLETING A CONSOLIDATED CONTINGENCY PLAN

A. FACILITY IDENTIFICATION AND OPERATIONS OVERVIEW

FACILITY ID # | | |

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

SPILL PREVENTION, CONTAINMENT, AND CLEANUP PROCEDURES: (Check all boxes that apply to indicate your procedures for containing spills, releases, fires or explosions; and, preventing and mitigating associated harm to persons, property, and the environment.) D1.

- [x] 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- [ ] 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls);
- [x] 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, pigs, pillows);
- [x] 4. COVER OR BLOCK FLOOR AND/ OR STORM DRAINS;
- [ ] 5. BUILT-IN BERM IN WORK / STORAGE AREA;
- [ ] 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- [x] 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS (e.g. Flammable liquids, Propane);
- [x] 8. STOP PROCESSES AND/OR OPERATIONS;
- [x] 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- [x] 10. SHUT-OFF WATER, GAS, ELECTRICAL UTILITIES AS APPROPRIATE;
- [x] 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE / MEDICAL AID;
- [x] 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AREAS;
- [x] 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION CALL;
- [x] 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE RESPONSE TEAM;
- [x] 15. REMOVE OR ISOLATE CONTAINERS / AREA AS APPROPRIATE;
- [x] 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- [x] 17. USE ABSORBENT MATERIAL FOR SPILLS WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- [x] 18. SUCTION USING SHOP VACUUM WITH SUBSEQUENT PROPER LABELING, STORAGE, AND HAZARDOUS WASTE DISPOSAL AS APPROPRIATE;
- [x] 19. WASH / DECONTAMINATE EQUIPMENT W/ CONTAINMENT and DISPOSAL OF EFFLUENT / RINSATE AS HAZARDOUS WASTE;
- [x] 20. PROVIDE SAFE TEMPORARY STORAGE OF EMERGENCY-GENERATED WASTES;
- [ ] 21. OTHER (Specify): D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (CHECK ALL THAT APPLY): E1.

- [ ] 1. BELLS;
- [x] 2. HORNS/SIRENS;
- [x] 3. VERBAL (I.E., SHOUTING);
- [ ] 4. OTHER (Specify): E2.

THE FOLLOWING LOCATION(S) IS/ARE EVACUEE EMERGENCY ASSEMBLY AREA(S) (i.e., Front parking lot, specific street corner, etc.) E3.

In the front area of the sales lot NW of Placentia Blvd.

Note: The Emergency Coordinator must account for all on site employees and/or site visitors after evacuation.

[x] EVACUATION ROUTE MAP(S) POSTED AS REQUIRED E4.

Note: The map(s) must show primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas, and must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

Explanation of Requirement: Advance arrangements with local fire and police departments, hospitals, and/or emergency services contractors should be made as appropriate for your facility. You may determine that such arrangements are not necessary.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Frey Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Contact: Deanna Hoppe

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Frey Environmental were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# 1121-01

Project: 777 W Orangethorpe Ave

Coordinates:

Latitude:	33.860896 33° 51' 39" North
Longitude:	-117.882112 -117° 52' 56" West
UTM Zone:	Zone 11 North

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

1.0 INTRODUCTION

This report documents and presents the results of an additional subsurface soil and soil vapor investigation conducted by FREY Environmental, Inc. (FREY) at the property located at 777 West Orangethorpe Avenue in Placentia, California (Site) (Figures 1 and 2) and provides a Conceptual Site Model (CSM) for the Site.

The scope of work described herein was outlined in a Proposal for Additional Soil & Soil Vapor Investigation (Proposal) at the Site prepared by FREY and signed by Orangethorpe Investment Partners LLC (Client) on August 21, 2021. Any deviations from the scope of work presented in the Proposal were agreed upon by the Client in emails, phone calls, and in person meetings with FREY personnel.

The objective of the CSM is to utilize current Site conditions and readily available data to illustrate the relationship between contaminants of potential concern (COPC), retention, transport, media, and receptors and to evaluate the need for additional assessment and/or engineered controls for proposed residential development of the Site. This CSM is based on guidelines from the American Society of Testing and Materials (ASTM, 2014) and the State Water Resources Control Board (SWRCB, 2012).

2.0 GEOLOGY AND HYDROGEOLOGY

2.1 REGIONAL GEOLOGY

The Site is situated on the western portion of the lower Santa Ana River Basin, which is part of the Orange County Coastal Plain on the eastern extreme of a broad alluvial plain within the Peninsula Range geomorphic province of California (OCWD, 1984). The Plain, which originates slightly to the east of the Santa Ana Canyon and slopes gently to the southwest, ultimately extends to the Pacific Ocean. The central and northern portions of the Orange County Coastal Plain consist of structurally downfolded strata of the Upper Pleistocene that form a broad synclinal trough. The trough includes successively permeable and impermeable strata, that reach a depth of up to 20,000 feet near the Anaheim/Orange area. The Whittier-Elsinore Fault Zone, which is located north of the Site, is a major geologic structure with evidence of movement in the Quaternary Period or later (OCWD, 1982).

The Site is underlain by Recent Quaternary Alluvium, consisting of non-marine terrace deposits. The Site is located approximately 4.3 miles southeast of the Coyote Hills, near the termination of the Anaheim Nose, an anticlinal feature which dips toward the northwest. The water-bearing deposits beneath the Site have been divided into three regional zones: the Upper, Middle and Lower Aquifer Systems. The Upper Aquifer System is approximately 1,000 feet thick, and consists of water-bearing sands and gravels, interbedded with non-water-bearing silts and clays (DWR, 1967).

2.2 REGIONAL HYDROGEOLOGY

The Site is located within the East Coastal Plain Hydrologic Subarea of the Lower Santa Ana River Subunit of the Santa Ana Hydrologic Unit (Groundwater Basin No. 801.11)(DWR, 2003). The East Coastal Plain Hydrologic Subarea is bound by the Pacific Ocean to the south and southwest, the San Gabriel River to the west and northwest, the Coyote Hills and the Chino Hills to the north, the Santa Ana Mountains to the northeast and east, and the San Joaquin Hills to the southeast. Groundwater in this subbasin generally flows in a southwesterly direction toward the Pacific Ocean from the main recharge areas along the base of the San Jacinto and Santa Ana Mountains, the Chino Hills and from the Prado Flood Control Basin (DWR, 1967).

The Site is located within the Forebay Area of the Orange County Groundwater Basin (719.47). Groundwater within East Coastal Plain Hydrologic Subarea is principally stored in the unconsolidated Pleistocene sediments and is generally unconfined. Wells within the planning area have yielded 4,000 gallon per minute (gpm). Groundwater within the East Coastal Plain Hydrologic Subarea has been identified to be beneficial for municipal, industrial, and agricultural use by the DWR (DWR, 2003).

2.3 SITE LITHOLOGY AND HYDROGEOLOGY

In general, as logged in historical subsurface investigations, soils beneath the Site have generally consisted of three distinct lithologic units. These units include: 1) alluvial deposits which consist predominantly of poorly-graded, fine to medium grained sands interbedded with lenses of silts and fine grained silty sands from just below the ground surface to approximate depths of 65 to 70 feet below the ground surface (bgs); 2) the Semi-PerchedAaquifer zone which consists primarily of alternating, layers of silts and clays with some, generally discontinuous sands and clays from approximately 70 to 95 feet bgs; and, 3) the Talbert Aquifer zone which consists primarily of poorly graded coarse grained sands and well graded gravels from approximately 95 to 150 feet bgs (deepest soil borings drilled at the Site). Figure 11 shows the location of subsurface geologic sections (Figures 12 through 14) which depict subsurface lithologies beneath the Site as logged prior to 2021.

Groundwater has been measured at depths ranging from approximately 70 to 95 feet bgs within the Semi-Perched Aquifer zone, and at depths ranging from approximately 93 to 134 feet bgs within the Talbert Aquifer zone at the Site. Historically, the estimated groundwater flow direction for groundwater within first-encountered groundwater within the semi-perched aquifer zone beneath the Site has been towards the east, northeast, or southeast. The groundwater flow direction within the Talbert Aquifer beneath the Site has historically been towards the west-southwest. Rose diagrams showing historical groundwater flow directions at the Site are included as Figure 5 and 7.

2.4 GROUNDWATER SUPPLY WELLS

The nearest active groundwater supply well to the Site is a Golden State Water Company (GSWC) – Placentia well identified as La Jolla #02, located approximately 1,750 feet east-southeast of the Site. The next closest active well is a City of Fullerton well identified as Kimberley 02, located approximately 2,850 feet west-northwest of the Site (SWRCB, 2021).

3.0 SITE DESCRIPTION

The Site is located at 777 West Orangethorpe Avenue on the northeastern corner of West Orangethorpe Avenue and South Placentia Avenue in Placentia, California at an approximate elevation of 197 feet above mean sea level (msl). The topography in the vicinity of the Site slopes gently toward the west (USGS, 1981).

The Site is bound to the north and the east by commercial/industrial facilities, and to the south and west by West Orangethorpe Avenue and South Placentia Avenue, respectively. A Jack in the Box restaurant is located adjacent to the Site on the southwest. The properties located to the south of the Site across West Orangethorpe Avenue are mostly residential with exception of a 7-11 convenience mart operating on the southeastern corner of West Orangethorpe Avenue and South Placentia Avenue. The properties located to the west of the Site across South Placentia Avenue are generally commercial/industrial facilities. A Site vicinity sketch is included as Figure 2.

The Site is developed with an approximately 35,000 square-foot two-story office building and auto service warehouse with the configuration shown on Figure 3, and the rest of the Site property is paved with exceptions of minimally landscaped strips along Placentia and Orangethorpe Avenues.

According to information provided by Mr. Brian Chuchua during personal interviews with FREY personnel, Mr. Chuchua has owned a majority of the Site property prior to 1974, and the Site was developed and operated as an automotive dealership and service center beginning in the early 1970's (Chuchua, 2021). Prior to 1988, the northwestern portion of the Site was operated as an active heliport (GeoResearch, 1988).

The former heliport fueling system, which was removed from the Site in 1988, consisted of one, 8,000-gallon fiberglass underground storage tank (UST) containing aviation fuel and one aviation fuel product dispenser island. The approximate location of the former UST at the Site is shown on Figure 3. According to Mr. Chuchua, the former aviation fuel UST was replaced by a 10,000-gallon, dual-compartment gasoline UST for use by the dealership, and a 2,500 gallon waste oil UST was located near the service bay doors as shown on Figure 3. According to Mr. Chuchua, both the 10,000-gallon gas UST and 2,500-gallon waste oil UST were removed in 1995 (Chuchua, 2021).

The Site was most recently operated as an automotive dealership and service center. The northern portion of the site is currently used for vehicle storage and some auto detailing and minor auto body work, but the Site is otherwise unoccupied.

4.0 ENVIRONMENTAL ASSESSMENTS AND REMEDIATION (1988-2018)

Petroleum hydrocarbon contamination was originally discovered at the Site during the removal of an 8,000-gallon aviation fuel UST and associated fueling appurtenances in 1988 (GeoResearch, 1988; OCHCA, 1988). Soil samples, collected from the UST pit following removal activities, had maximum laboratory reported concentrations of total petroleum hydrocarbons as gasoline (TPHg), and benzene, toluene, ethylbenzene, and total xylenes (BTEX) of 5,898 milligram per kilograms (mg/kg), 169 mg/kg, 3,060 mg/kg, 43, mg/kg, and 200 mg/kg, respectively. UST cavity soil sample laboratory analytical results are summarized in Table 1.

The following is a brief summary of environmental assessment and remediation activities conducted at the Site following discovery of the contamination. A full background of historical environmental assessment and remediation activities for the Site is located in documents found on the State Water Resources Control Board (SWRCB) GeoTracker website under the facility name - Brian Chuchua Jeep with Global ID T0605900698 (SWRCB, 2021).

4.1 ASSESSMENT OF SOIL

Between 1988 and 2015, approximately forty-six (46) soil borings were drilled on-Site in order to define the vertical and lateral extent of petroleum hydrocarbons in soil and groundwater. Soil borings ranged in depth from 30 feet bgs to 150 feet bgs. Soil boring/ well locations are shown on Figure 3.

Approximately three hundred (300) soil samples were collected from soil borings advanced at the Site and analyzed for TPHg, total petroleum hydrocarbons as diesel (TPHd), total petroleum hydrocarbons as oil (TPHo), and/or for volatile organic compounds (VOCs) including BTEX and fuel oxygenates, VOC analyses of soil samples beginning in 2005 were for the full suite of VOCs including chlorinated hydrocarbons such as the solvent tetrachloroethylene (PCE). These compounds are defined as COPC for the further remainder of the document. Laboratory analytical results for soil samples collected from soil borings are summarized in Tables 2 and 3. Concentrations of TPHg and TPHd are shown on geologic subsurface sections included as Figures 12 through 13. A summary of historical soil sample analyses results is below.

- TPHg and TPHd were detected in soil samples collected from soil borings located at the Site at concentrations up to 1,198 milligram per kilograms (mg/kg) (MW15 at 71.5-feet bgs) and 2,000 mg/kg (MW19 at 35-feet bgs), respectively. However, TPHg concentrations were generally less than 100 mg/kg, with concentrations greater than 100 mg/kg present between approximately 30 and 70 feet bgs near the former UST tank cavity, and within the semi-perched aquifer zone between approximately 70 to 95 feet bgs near the locations of MW5, MW11, MW12, and MW15.

- Concentrations of TPHo were not detected at or above the laboratory detection limit of 50 mg/kg in any of the soil samples analyzed for TPHo.

- Benzene was detected in soil samples collected from soil borings located at the Site at concentrations up to 19.6 mg/kg (GW-1 at 65-feet bgs). However, benzene concentrations were generally less than 1 mg/kg, with benzene concentrations in excess of 0.1 mg/kg generally located in saturated soils between depths of approximately 70 and 80 feet bgs.

- No fuel oxygenates were detected above their respective laboratory detection limits in any of the soil samples analyzed for fuel oxygenates.

- No chlorinated hydrocarbons were detected above their respective laboratory detection limits in any of the soil samples analyzed for the full suite of VOCs.

- Additional detected VOCs in soil samples have included toluene, ethylbenzene, total xylenes, acetone, n-butylbenzene, sec-butylbenzene, isopropylbenzene, naphthalene, 1,2,4-trimethylbenzene (TMB), and 1,3,5-TBMB.

The lateral and vertical extent of COPC have been relatively well assessed in all directions.

4.2 ASSESSMENT OF GROUNDWATER

Groundwater sampling has been conducted at the Site thirty-six (36) times during a 21 period between June 1997 and April 2018. A summary of historical groundwater levels and chemical analysis results for TPHg, TPHd, TPHo, BTEX, and fuel oxygenates is presented in Table 4, and a summary of additional detected VOCs in groundwater is provided in Table 5. A summary of well construction details is presented in Table 6. The most recent sampling event was conducted on April 2, 3, and 4, 2018. Figures 3 & 4 depict calculated groundwater elevations and estimated flow direction at the Site during the most recent monitoring and sampling event conducted on April 2 through 4, 2018. A rose diagram showing the historic estimated groundwater flow directions in the Semi-Perched Aquifer zone and the Talbert Aquifer zone are shown on Figures 5 and 7. Figures 8 through 10 show the concentrations of TPHg, TPHd, and benzene in groundwater beneath the Site on April 2 through 4, 2018. A summary and discussion of the results from the April 2 through 4, 2018 event follows:

- On April 2 through 4, 2018, depth to groundwater ranged from 70.50 feet to 93.75 feet below top of casing (btoc) in the Semi-Perched Aquifer zone. The shallow Semi-Perched Aquifer was considered mostly dry with little perched water. Many of the groundwater monitoring wells screened within this zone were found to be dry, or nearly dry, during this and previously conducted groundwater monitoring and sampling events at the Site.

On April 2 through 4, 2018, depth to groundwater ranged from 93.15 feet to 93.55 feet btoc in the Talbert Aquifer zone. Historically, groundwater elevations have fluctuated in this zone with some wells showing drastic fluctuations in amounts up 60 feet in some Site wells.

On April 2 through 4, 2018, the overall groundwater flow direction was estimated to be towards the east in the at approximately 0.01 feet per foot in the Semi-Perched Aquifer zone and to the southwest at an approximate gradient of 007 feet/foot in the Talbert Aquifer zone. Historically, groundwater in the Semi-Perched Aquifer has been to flow to in a north to south easterly direction, and groundwater in the Talbert Aquifer Zone has been estimated to flow to the west-southwest.

- TPHg were detected in groundwater samples collected and analyzed from 9 of the 18 wells sampled on April 2 through 4, 2018 at concentrations up 2,500 ug/L (MW9 screened through the Semi-Perched Aquifer zone). Concentrations of TPHg were significantly lower than historical highs. TPHg was detected at a historical high of 1,700,000 ug/L in well MW5.

- TPHd were detected in groundwater samples collected and analyzed from 3 of the 18 wells sampled on April 2 through 4, 2018 at concentrations up 5,100 ug/L (MW9). Concentrations of TPHd were significantly lower than historical highs. TPHd was detected at a historical high of 880,000 ug/L in well MW5.

- TPHo was not detected in any groundwater samples analyzed from 18 wells sampled on April 2 through 4, 2018.

- Benzene was detected in 8 of the 18 groundwater samples collected and analyzed during the current sampling event at concentrations up to 95 ug/L (well MW2 screened through the s Semi-Perched Aquifer zone). Concentrations of benzene were significantly lower than historical highs. Benzene was detected at a historical high of 330,000 ug/L in well MW3.

- No fuel oxygenates were detected in any of the wells sampled on April 2 through 4, 2018. Historically, fuel oxygenates were not a constituent of concern in groundwater at the Site.

- Additional VOCs and the maximum reported concentrations detected in groundwater samples collected and analyzed on April 2 through 4, 2018 are ethylbenzene (450 ug/L), total xylenes (150 ug/L), n-butylbenzene (14 ug/L), naphthalene (120 ug/L), n-propylbenzene (360 ug/L), 1,2,4-trimethylbenzene (99 ug/L), and1,3,5-trimethylbenzene (55 ug/L).

- No chlorinated solvents such as PCE were detected in the groundwater samples collected and analyzed on April 2 through 4, 2018. Historically, PCE has been detected in groundwater monitoring wells MW1, MW7, MW11, MW12, MW15, MW16, MW22, and MW23 on one or more occasions in concentrations of 5.0 ug/L or less, and PCE was not considered a COPC.

The occurrence and extent of COPC in groundwater beneath the Site is laterally and vertically well assessed.

4.3 REMEDIATION

4.3.1 Soil Vapor Extraction

On April 22, 1991, vapor extraction remedial activities were commenced at the Site utilizing a VR Systems Model V3C S.N. 30 consisting of a modified Ford industrial internal combustion, liquid-cooled V-8, 460 cubic inch displacement engine capable of generating 250 scfm, a 3-way/2way catalytic converter, and a computerized stoichiometric fuel regulator for treatment prior to discharge into the atmosphere. The vapor extraction system (VES) extracted soil vapor from one individual well at a time, starting with vapor extraction from well GW-2. During operation of the VES, wells GW-4, VE-1A, and VE-2A were also used for vapor extraction individually, to maximize the mass removal rates of concentrations of petroleum hydrocarbons in soil vapor from beneath the Site. Location of the wells used for vapor extraction are shown on Figure 2. The VES operated at the Site until May 2, 1992, for a total 375 days of operation (Robinson, 1993).

The vapor extraction system operated an estimated total of approximately 7,218 hours between system start-up on April 22, 1991, through May 2, 1992, when the vapor extraction system was shut down. Undifferentiated volatile organic compounds (UVOCs) in the influent vapor stream were reduced from a maximum field measured concentration of approximately 27,000 parts per million by volume (ppmv) between April 22 and 25, 1991, to a field reported concentration of 210 ppmv between February 19 and 21, 1992. Based on field monitored UVOCs and estimated extraction flow rates through May 2, 1992, it was estimated that 584 gallons (3,504 pounds) of petroleum hydrocarbons were removed from subsurface soils by the vapor extraction activities conducted between April 22, 1991 and May 2, 1992 (Robinson, 1993).

4.3.2 Soil Vapor Extraction Rebound Testing

Vapor extraction tests (VETs) were conducted on October 13 through 15, 2015, to assess the volatile petroleum hydrocarbon concentrations beneath the Site and evaluate if the secondary source of petroleum hydrocarbons (petroleum hydrocarbon impacted soil) had been mitigated to the extent practicable.

The VETs were conducted using equipment designed to extract soil vapor at variable extraction flow rates and applied vacuums including a mobile VES consisting of a 250 scfm positive displacement blower and granular activated carbon (GAC) vessels to treat extracted vapors.

Five, two-step soil VETs were conducted using groundwater monitoring wells MW1, MW20, MW18, and MW15R and vapor extraction well VE1d, as extraction wells. Additionally, two, three-step VETs were conducted using groundwater monitoring well MW9 and vapor extraction well VE1s as extraction wells. One short, one-step VET was conducted using groundwater monitoring well MW2 as an extraction well.

Groundwater monitoring wells MW1, MW2, MW9, MW15R, MW18, and MW20, and vapor extraction wells VE1s and VE1d were used for testing based on their proximity to the former UST cavity and dispenser islands (suspected source area of the release of petroleum hydrocarbons to subsurface soils) and based on their various screened intervals through different lithological units beneath the Site. Additionally, groundwater monitoring wells MW2 and MW9 were used for testing to assess whether the lateral extent of petroleum hydrocarbons in soil vapor beneath the Site extends towards the south and/or west of the suspected source area.

During each VET, vacuum responses, applied vacuums, vapor extraction flow rates, and influent UVOC concentrations were monitored with field equipment. Soil vapor samples were collected in tedlar bags from each extraction well upon commencement and at the conclusion of each VET, before the VES was shutdown. A total of fourteen soil vapor samples were submitted to a laboratory for chemical analysis and analyzed for TPHg and the full list of VOCs, including fuel oxygenates. A summary of soil vapor sample analyses results from the VETs is included as Tables 7 and 7A and summarized below.

- With the exceptions of relatively low concentrations of TPHg and BTEX detected in soil vapors extracted from groundwater monitoring well MW9 at depths between 70 and 90 feet bgs, and relatively low concentrations ethylbenzene and total xylenes detected in soil vapors extracted from MW15R at depths of 59 to 79 feet bgs, TPHg and BTEX were not detected in any of the other soil vapor samples collected and analyzed during the VETs.

- PCE was detected in twelve of fourteen vapor samples collected and analyzed during the VETs at concentrations ranging from 101.75 micrograms per cubic meter (ug/m^3) to 657.97 ug/m^3 (Table 7A). Maximum PCE concentrations detected in soil vapor during vapor extraction rebound testing are shown on Figure 15.

- Additional VOC detected in soil vapors collected during the VETs include 1,1,2-trichloro-1,2,2-triflouroethane, trichlorofluoromethane, 1,24-TMB, 1,3,5-TMB, and ethanol.

The results of the VETs demonstrated that petroleum hydrocarbon vapors were not present in subsurface soil vapor beneath the Site in the areas where vapor extraction testing was conducted, with the exception of the area adjacent to groundwater monitoring well MW9.

Based on the results of vapor extraction testing, the secondary source of petroleum hydrocarbons at the Site appears to have been remediated to the extent practicable. The VETs demonstrate that previously conducted vapor extraction remedial efforts and natural attenuation have effectively mitigated petroleum hydrocarbons in subsurface soil and soil vapor beneath the Site.

4.4 ASSESSMENT OF SOIL VAPOR

Shallow soil vapor assessment was conducted at the Site on June 15 and 16, 2015 to assess for 1) the presence of COPC in soil vapor beneath the Site near the northern property line towards the off-Site building adjacent to the Site to the north; 2) assess for the presence of COPC in soil vapor beneath the Site to the east of the former source area in the direction of the on-Site buildings, and; 3) assess the potential risks of vapor intrusion to commercial workers that occupy the current building on-Site and to future development that may be built over the former fueling system location.

Six soil vapor probes (SV1 through SV6) were installed at the locations shown on Figure 3 with vapor implants placed at 5 feet bgs.

Soil vapor samples collected from soil vapor probes SV1 through SV6 on June 19, 2015, and were laboratory analyzed for TPHg and VOCs. TPHg and VOCs were not detected above their respective laboratory detection limits in the soil vapor samples collected from SV1 through SV6.

4.5 CASE CLOSURE

All remaining Site wells were destroyed in May of 2019 and Site investigation, and corrective action for the release of petroleum hydrocarbons from the former fueling system on the Site was certified complete by the Orange County Health Care Agency (OCHCA) in the issuance of a no further action (NFA) letter dated July 1, 2019. A copy of the of the OCHCA NFA letter for the Site is provided in Appendix A.

5.0 ENVIRONMENTAL ASSESSMENT (2021)

5.1 PHASE I ENVIRONMENTAL SITE ASSESSMENTS

FREY was provided with copies of a Phase I Environmental Site Assessment (ESA) completed for the Site by Ninyo & Moore dated May 11, 2021 (N & M, 2021) and a draft Phase I ESA for the Site from Tetra Tech BAS dated June 2021 (Tetra Tech, 2021). A summary of the information in the conclusions of the reports are below.

Ninyo & Moore concluded the following conditions were recognized environmental concerns (REC) during the conduct of their Phase I ESA for the Site:

- The presence of five underground hydraulic lifts in the service center portion of the Site building.
- The presence of floor drains with surface staining in the service center portion of the Site building.
- The potential presence of a clarifier to the west of the service center building.

- The former leaking underground storage tank (LUST) case with case closure for commercial land use from the regulatory agency, due to the proposed residential land use of the Site.
- The potential presence of a 2,500-gallon waste oil UST on the Site.
- The potential presence of a spray booth paint on the Site from 1978 to 1990.
- The potential presence of a TPHg groundwater plume beneath the southwest portion of the Site from an adjoining closed LUST case at 805 West Orangethorpe Avenue.

Tetra Tech concluded the following conditions were RECs during the conduct of their Phase I ESA for the Site:

- The presence of junk vehicles, old equipment, used tires and miscellaneous debris.
- As part of historical operations, there were UST and above-ground storage tanks (ASTs), hydraulic lifts, a paint booth, and, potentially, a clarifier at the Site.
- Staining and generation of waste.
- The adjacent Jack in the Box property is a former service station, where residual petroleum impacts to groundwater remain. In addition, the Site is located on the edge of the Orange County North Basin Superfund groundwater plume.
- A former fuel UST was found to be a leaking in the late 1980s. The release was investigated and remediated and received case closure from the OCHCA in 2019. Tetra Tech BAS considered the closed LUST case to be a historical recognized environmental condition (HREC).

Based on the findings and conclusions in the Phase I ESAs both Ninyo and Moore and Tetra Tech recommended further subsurface investigation to evaluate the RECs. Additionally, Tetra Tech noted that because LUST case closure was granted for commercial use of the property and consultation with a regulatory agency may be required as part of property redevelopment for residential use.

5.2 SOIL AND SOIL VAPOR SAMPLING

FREY was provided with soil and soil vapor laboratory reports for samples collected on July 6, 2021, by Tetra Tech, a draft table summarizing soil vapor analytical results, and a draft figure of the Site showing the locations of 18 soil and/ or soil vapor sampling points at the Site. The draft figure includes isoconcentration lines for PCE in soil gas. Copies of the laboratory reports and the draft table and figure are provided in Appendix B. A summary of the details derived from the reports and the figure is below.

Soil

According to the information supplied by Tetra Tech, soil samples were collected at 5 feet bgs from 5 soil borings advanced at the Site on July 6, 2021. The soil samples were analyzed for TPH in the carbon chain range (TPHcc), CAM Metals, VOCs, and polychlorinated biphenyls (PCBs). Laboratory results of the soil sampling are summarized below.

- TPHcc were not detected above the laboratory detection limit in any of the soil samples.

- With the exceptions of 1.0 mg/kg of chloroform and 1.3 mg/kg of methyl chloride detected in one sample, no other VOCs were detected in the soil samples.

- Metals detected in the soil samples included barium, cadmium, cobalt, chromium, copper, molybdenum, nickel, lead, vanadium, and zinc.

- PCBs were not detected above the laboratory detection limit in any of the soil samples.

FREY compared the VOC and metal concentrations to their respective regional screening levels (RSLs) for residential soil as listed on the US EPA RSL Summary Table dated November 2020 and their respective San Franscisco Bay Regional Water Quality Control Board (SFBRWQCB) environmental screening levels (ESLs) for residential shallow soil exposure (January 2019). The detected concentrations of the VOCs and metals did not exceed their respective RSLs or ESLs.

Soil Vapor

According to the information supplied by Tetra Tech, soil vapor samples were collected from 5 feet bgs from 18 soil vapor probes installed at the Site on July 6, 2021. The 18 soil vapor samples and one duplicate sample were analyzed by a laboratory for the full suite of VOCs. Laboratory results are summarized below.

- Ethylbenzene was detected in seven of the soil vapor samples at concentrations ranging from 22 micrograms per cubic meter (ug/m3) to 371 ug/m3.
- Freon 113 was detected in one soil vapor sample at a concentration of 42 ug/m3.
- Isopropylbenzene was detected in two soil vapor samples at concentrations of 39 ug/m3 and 95 ug/m3.
- N-propylbenzene was detected in two soil vapor samples at concentrations of 62 ug/m3 and 131 ug/m3.
- Tetrachloroethylene (PCE) was detected in all of the soil vapor samples at concentrations ranging from 165 ug/m3 to 1,400 ug/m3.
- Toluene was detected in all of the soil vapor samples at concentrations ranging from 23 ug/m3 to 381 ug/m3.
- 1,2,4-trimethylbenzene (TMB) was detected in nine of the soil vapor samples at concentrations ranging from 24 ug/m3 to 1,190 ug/m3
- 1,3,5-TMB was detected in five of the soil vapor samples at concentrations ranging from 33 ug/m3 to 653 ug/m3.
- Total xylenes were detected ten of the soil vapor samples at concentrations ranging from 45 ug/m3 to 2,620 ug/m3.

The table below provides the maximum concentrations of VOCs detected in soil vapor in ug/m3 collected from 5 feet bgs on July 6, 2021, along with a comparison to the DTSC SL and the US EPA RSLs for residential indoor air with applied attenuation factors (AF) and the SFRWQCB

ESLs for residential subslab soil gas. The DTSC SL and the US EPA RSLs shown are with an AF of 0.001 for future residential buildings above a contaminant source as described in the DTSC *Final: Guidance for Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air (Vapor Intrusion Guidance)* dated October 2011 and an AF of 0.03 for sub-slab soil gas as recommended by the DTSC in the *Human Health Risk Assessment (HHRA) Note Number 3, DTSC-modified Screening Levels* released June 2020.

Analyte	DTSC SL w/AF	US EPA RSL w/AF	SFBRWQCB ESLs	Maximum Laboratory Detected Concentration
Ethylbenzene	Not provided	1,100 / 36.7	37	371
Freon 113	Not provided	5,200,000 / 173,333	Not provided	42
Isopropylbenzene	Not provided	420,000 / 14,000	Not provided	95
N-propylbenzene	Not provided	1,000,000 / 33,333	Not provided	131
PCE	460 / 15	11,000 / 15.3	15	1,400
Toluene	Not provided	5,200,000 / 173,333	10,000	381
1,2,4-TMB	Not provided	63,000 / 2,100	Not provided	1,190
1,3,5-TMB	Not provided	63,000 / 2,100	Not provided	653
Total xylenes	Not provided	100,000 / 3,333	3,500	2,620

Notes: Values presented in table above are in ug/m3. DTSC SL and US EPA RSL values shown with applied AF of 0.001 / followed by an applied AF of 0.03

A summary of detected VOCs in soil vapor samples collected on July 6, 2021, is also provided in Table 9 along with corresponding ESLs for residential subslab soil gas and corresponding SLs and RSLs for residential air with applied attenuation factors of both 0.001 and 0.03.

- Laboratory detected concentrations of ethylbenzene exceeded the US EPA RSL with an applied AF of 0.03 and exceeded the SFBRWQCB ESL in six of the eighteen soil vapor probes sampled on July 6, 2021.

- Laboratory detected concentrations of PCE exceeded the DTSC SL and US EPA RSL with an applied AF of 0.03 and exceeded the SFBRWQCB ESL in all of the soil vapor samples collected and analyzed on July 6, 2021.

6.0 ADDITIONAL SUBSURFACE SOIL AND SOIL VAPOR INVESTIGATION (FREY)

In an effort to further delineate PCE in soil vapor beneath the Site and to assess for a potential on-Site source of PCE to soil vapor, FREY conducted an additional subsurface soil and soil vapor investigation at the Site in August and September of 2021 as further described here in Section 6.0. Activities related to this additional subsurface soil and soil vapor investigation were conducted under the direction of a California Certified Engineering Geologist and a California Registered Geologist. A Site-specific Health and Safety Plan was used to guide field personnel during the conduct of field work.

6.1 OBJECTIVES

The objectives of the scope of work described below were as follows:

- Further assess subsurface soil and soil vapor for VOCs, particularly PCE, in two locations based on the results of Tetra Tech's soil vapor sampling conducted on July 6, 2021;
- Further assess subsurface soil and soil vapor for VOCs, particularly PCE, at the suspected former waste oil underground storage tank (UST) location;
- Assess soil in the locations of five in-ground hoists and one assumed former in-ground hoist for TPH;
- Assess subsurface soil and soil vapor at the location of two subsurface anomalies located in the northern service area of the Sie building as identified by a geophysical survey conducted on August 13, 2021, by Spectrum Geophysics;
- Assess for the presence of a clarifier in the location of the concrete patch near the northwest corner of the service bay canopy; and
- Assess subsurface soil for VOCs in the location of the concrete patch near the service bay canopy.

6.2 SCOPE OF WORK

The scope of work conducted to meet the objectives of the investigation was as follows:

- Scheduled labor, subcontractors, and materials;
- Implemented a Site-specific health and safety plan;
- Conducted a geophysical subsurface survey;
- Visited the Site to mark boring locations;
- Notified Dig Alert and obtained an underground service alert number.
- Obtained a vapor probe survey permit from the Orange County Health Care Agency (OCHCA);
- Conducted a geophysical subsurface survey;
- Advanced five (5) soil borings (B1 through B5) to 10 feet bgs near existing and assumed former in-ground hoist locations;
- Advanced one soil boring (B6) to 10 feet bgs
- Advanced two (2) soil borings (SV1 and SV3) to 30 feet bgs in the locations with maximum PCE concentrations in soil vapor as determined by soil vapor sampling conducted by Tetra Tech on July 6, 2021;
- Advanced one (1) soil boring (SV2) to 30 feet bgs in the location of a former waste oil UST as confirmed by Mr. Chuchua;
- Advanced two (2) soil borings (HA1 and HA2) to 30 feet bgs in the locations of subsurface geophysical anomalies detected as part of the geophysical survey inside the service area of the building;
- Converted soil borings SV1, SV2, SV3, HA1, and HA2 into triple-nested soil vapor probes with tips placed at 5 feet bgs, 15 feet, bgs, and 30 feet bgs;

- Submitted soil samples collected at 5 and 10 feet bgs from borings B1 through B5 and SV3 for laboratory analysis of total petroleum hydrocarbons – full carbon chain range (TPH-CC);
- Submitted soil samples collected at 5 and 10 feet bgs from borings B6 and at 5 feet bgs to 30 feet bgs from soil boring SV1, SV2, SV3, HA1, and HA2 for laboratory analysis of VOCs;
- Purged and sampled triple-nested probes SV1, SV2, SV3, HA1, and HA2;
- Submitted fifteen (15) soil vapor samples and one (1) duplicate soil vapor sample to a laboratory for analysis; and,
- Evaluated the field and laboratory data and prepared this report.

6.3 FIELD ACTIVITIES

6.3.1 Geophysical Survey

FREY personnel met with Spectrum Geophysics (Spectrum) who performed a geophysical subsurface survey at the Site on August 13 and 16, 2021. The primary purpose of the survey was to detect and delineate, insofar as possible, a possible UST or clarifier, a backfilled excavation resulting from a UST's or clarifier's removal, and/or any UST-related pipes, conduits, or substructures that could still be in place.

Spectrum conducted a geophysical subsurface survey in the inside of the two service rooms of the Site building using ground penetrating radar (GPR) on August 13, 2021. GPR is a surface method that uses the properties of electromagnetic waves to create a detailed image of subsurface layers. Spectrum marked subsurface anomalies determined by preliminary GPR readings on the floor using paint. The only significant anomalies detected were two, adjacent rectangular areas approximately 5 feet by 10 feet in size, that were detected east of the service canopy within the northern service room.

On August 16, 2021, FREY personnel and Spectrum returned to the Site to survey the exterior of the Site building. Spectrum completed a survey of an approximate 80 by 150 foot area west of the Site building and south of the fenced enclosure using the frequency domain electromagnetic (EM) method. The frequency domain EM method uses the inductive properties of a continuous primary electromagnetic field to measure the conductivity (reciprocal of resistivity) of the material through which the field passes. Spectrum marked subsurface anomalies determined by preliminary EM readings on the pavement using paint. With exception of two anomalies assumed to be piping, no other significant anomalies were identified in the area of the parking lot that was surveyed.

A copy of the Spectrum report for the Site dated September 22, 2021. is provided in Appendix C. The approximate locations of anomalies detected by Spectrum are depicted on Figure 16.

6.3.2 Pre-Drilling and Sampling Activities

On August 25, 2021, FREY marked the Site with white paint in accordance with underground service alert (USA) regulations and obtained USA number A212370975-00A.

FREY obtained permit #21-08-49 for the installation of temporary triple-nested soil vapor probes from the OCHCA for the investigation.

6.3.3 Advancement of Soil Borings and Soil Sampling

Prior to completion with a drill rig, the surface at each soil boring location was cored with a 4-inch or 10-inch concrete core barrel, and then the borehole was hand cleared using a hand auger or a post hole digger to the depth noted in the table below.

Borehole Designation	Borehole Location	Core Diameter (in.)	Hand Cleared Depth (ft)	Final Depth (ft)
B1	Adjacent to an existing hoist	4	4	10
B2	Adjacent to an existing hoist	4	4	10
B3	Adjacent to an existing hoist	4	4	10
B4	Adjacent to an assumed former hoist	4	4	10
B5	Adjacent to an existing hoist	4	4	10
B6	On concrete pad in the parking lot near the northwest corner of the service canopy	4	4	10
SV1	In the parking lot adjacent to Tetra Tech soil vapor sample location B-15	10	5	30
SV2	In the parking lot in the area of the former waste oil tank	10	5	30
SV3	Adjacent to an existing hoist and a few feet away from Tetra Tech soil/soil vapor sample location B-2	10	5	30
HA1	In the service building in an area shown to be an anomaly during the geophysical survey	10	5	30
HA2	In the service building in an area shown to be an anomaly during the geophysical survey	10	5	30

In order to construct triple-nested soil vapor probes per the OCHCA soil vapor probe survey permit requirement, soil borings SV1, SV2, SV3, HA1, and HA2 were hand cleared with a borehole diameter of no less than 6.5 inches to 5 feet bgs.

Upon completion of hand clearing, soil borings were drilled to the final depths noted in the table above by J & H Drilling Co. with a direct push rig on August 30 and 31, 2021. Utilizing the direct push drill rig's hydraulic hammer, undisturbed soil samples were collected from all borings at 5 foot intervals from approximately 5 feet bgs to the bottom of each borehole. Soil samples were collected by hammering a 2-inch diameter California Modified split spoon sampler into undisturbed soil and filling a 1-inch diameter by 22-inch long acetate liner housed inside the sampler. Down hole drilling equipment was cleaned between each boring using a non-phosphate detergent solution followed by a triple rinse using tap water. The sampler was dried with a towel prior to sampling.

Soil samples and soil cuttings were examined in order to characterize the soil lithology and to look for evidence of the presence of impacted soil. Immediately after collection, soil samples were screened for undifferentiated volatile organic compounds (UVOCs) with a photo-ionization detector (PID). UVOCs in excess of 1 part per million (ppm) were not detected in any of the soil samples collected from any of the soil borings advanced during this investigation. No field indications of petroleum hydrocarbon or solvent impacted soil were observed.

After the soil samples were collected, the sample containers (acetate liners) were capped and labeled with the borehole number, sample depth, project number, and time and date of collection. The soil samples were placed in an ice chest cooled with ice and delivered to the laboratory following Chain of Custody procedures.

Upon completion of soil sampling, soil borings B1 through B6 were backfilled with hydrated bentonite crumbles to approximately 1 foot bgs and then completed with concrete to match the surrounding surface. Soil borings SV1, SV2, SV3, HA1, and HA2 were completed as triple-nested soil vapor probes as described in Section 6.3.4.

Soil borings advanced as part of this investigation are depicted on Figure 16 along with Tetra Tech's soil vapor and soil/soil vapor sampling points from their July 6, 2021 sampling event. Boring logs and explanations regarding the format, terms, and soil classification system used to describe the soil conditions are presented in Appendix D.

6.3.4 Soil Vapor Probe Installation

On August 30 and 31, 2021, upon completion of soil sampling activities, soil borings SV1, SV2, SV3, HA1, and HA2 were completed as triple-nested soil vapor probes at the locations shown on Figure 16. Soil vapor probe installation was performed in general accordance with the "Advisory – Active Soil Gas Investigations" as published by the California Environmental Protection Agency Department of Toxic Substances Control (DTSC)(DTSC, 2015).

Soil vapor probes SV1, SV2, SV3, HA1, and HA2 were installed with probe implants set at 4.5 feet bgs, 14.5 feet bgs, and 29.5 feet bgs. Soil vapor probes were constructed with 0.17-inch inner diameter section of Nylaflow tubing inserted into the borehole. A plastic vapor implant was located on the bottom end of the tubing while an airtight vinyl cap was placed on the end of the tubing which protruded above the ground surface. Each vapor implant was encased in twelve inches of screen washed sand. The borehole space was filled with twelve inches of dry bentonite granules placed above each vapor implant sand pack interval, and bentonite granules were added in one-foot lifts and hydrated to the depth of the next vapor probe implant sand pack interval or to within twelve inches of the ground surface. Vapor probe tubing protruding from the surface in each borehole was constructed in a triangular formation so that each tube was 2 inches from the borehole wall and two inches from the other tubes in the borehole. Each tube was labeled with its probe depth (5, 15, and 30 feet bgs). A traffic-rated 6-inch well box was placed above the vapor probe tubing and the annulus around the well box was filled with sand to the ground surface.

Construction details for soil vapor probes SV1, SV2, SV3, HA1, and HA2 are shown on boring logs included in Appendix D.

Following soil vapor sampling on September 2, 2021 as described in Section 6.3.5, all soil vapor probes at the Site were removed on September 16, 2021 in accordance with the OCHCA vapor probe survey permit requirement, and the surface was capped with concrete to match the surround surface.

6.3.5 Sampling of Soil Vapor Probes

Soil vapor sampling was conducted on September 2, 2021, by Optimal Technology (Optimal), a State certified hazardous waste testing mobile laboratory, based in Thousand Oaks, California. Triple-nested soil vapor probes SV1, SV2, SV3, HA1, and HA2 were purged and sampled in accordance with the protocol set forth in the Advisory (DTSC, 2015).

Rainfall in excess of ½ inch did not occur at the Site within the 5 days prior to sampling. Areas surrounding the soil vapor probe locations were free of standing water. Each soil vapor probe was purged of three purge volumes using a vacuum pump. The probe purging rate did not exceed 200 milliliters per minute (mL/min). Isobutane was used as the tracer gas. Soil vapor samples were collected in gas tight syringes by Optimal. Additional methods and procedures employed by Optimal are described and included with the laboratory report, a copy of which is provided in Appendix E.

6.4 LABORATORY ANALYSES

6.4.1 Soil Samples

Soil samples collected from soil borings B1 through B5 and SV3 at 5 feet bgs and 10 feet bgs were analyzed for total petroleum hydrocarbons – full carbon chain range (TPH-CC) in accordance with EPA Method No. 8015B.

Soil samples collected from soil borings B6 at 5 feet bgs and 10 feet bgs and all soil samples collected from soil borings SV1, SV2, SV3, HA1, and HA2 from 5 feet bgs to 30 feet bgs were analyzed for VOCs in accordance with EPA Method No. 8260B.

Soil sample analysis was performed by eurofins/Calscience, a state licensed hazardous waste testing facility located in Garden Grove, California.

6.4.2 Soil Vapor Samples

Optimal Technologies analyzed a total 16 soil vapor samples (one from each triple-nested probe and one duplicate sample) for VOCs in accordance with EPA Method No. 8260B.

6.5 RESULTS OF THE SUBSURFACE INVESTIGATION

6.5.1 Soil Sample Results

TPH-CC

A total of twelve (12) soil samples collected from 5 and 10 feet bgs from soil borings B1 through B5 and SV3 were analyzed for TPH with a carbon chain breakdown.

- C_{10}-C_{28} (diesel range organics) were detected in four (4) of the 12 soil samples at a maximum concentration of 53 mg/kg (B3-5).

- C_{17}-C_{32} (aromatic high range) was detected in one (1) of the 12 soil samples at a concentration of 44.9 mg/kg (B3-5).

- C_{24}-C_{36} (motor oil range) was detected in one (1) of the 12 soil samples at a concentration of 43.1 mg/kg (B3-5).

- C_{6}-C_{44} (total TPH) were detected in seven (7) of the 12 soil samples at concentrations ranging from 5.8 mg/kg (B5-5) to 93 mg/kg (B3-5).

TPH-CC soil sample analyses results are summarized in Table 8. Copies of the laboratory analyses reports for soil samples are included in Appendix E.

VOCs

A total of thirty-two (32) soil samples, collected from soil borings B6 (from 5 and 10 feet bgs) and from soil borings SV1, SV2, SV3, HA1, and HA2 (from 5, 10, 15, 20, 25, and 30 feet bgs), were analyzed for a full suite of VOCs.

- No VOCs were detected above the laboratory detection limits in any of the soil samples analyzed for VOCs.

Copies of the laboratory analyses reports for soil samples are included in Appendix E.

6.5.2 Soil Vapor Sample Results

Fifteen (15) unique soil vapor samples were analyzed for VOCs. Toluene and PCE were the only VOCs detected above the laboratory detection limits in the soil vapor samples collected as part of this investigation.

- Toluene was detected in soil vapor samples collected from the 5 foot probe depth interval of SV1 and SV2 at concentrations of 20 micrograms per cubic meter (ug/m^3) and 33 ug/m^3, respectively.

- PCE was detected in all of the soil vapor samples collected and analyzed as part of this investigation at concentrations ranging from 381 ug/m^3 (HA2 at 30 feet bgs) and 1,107 ug/m^3 (SV1 at 15 feet bgs).

Soil vapor analyses results from soil vapor samples collected as part of this investigation as well as soil vapor sampling results for the soil vapor sampling event conducted by Tetra Tech on July 6, 2021 are summarized in Table 9. A copy of the soil vapor sample laboratory analysis report is included in Appendix E.

6.6 DISCUSSION OF RESULTS

6.6.1 Soil Sampling Results Discussion

TPH

Laboratory detected TPH concentrations in soil samples collected and analyzed on August 30 and 31, 2021 were compared to the SFBRWQCB ESLs for shallow residential soil and the DTSC SLs for residential soil which are also provided on Table 8.

The SFBRWQCB provides ESLs for C_{10}-C_{28} (diesel range organics) and C_{24}-C_{36} (motor oil range) of 260 mg/kg and 1,600 mg/kg, respectively. The maximum concentrations detected of C_{10}-C_{28} (53 mg/kg) and C_{24}-C_{36} (43.1 mg/kg) during the current investigation were significantly lower than their respective ESLs.

- The DTSC provides a SL of 2,400 mg/kg for C_{17}-C_{32} (aromatic high). The only concentration of C_{17}-C_{32} detected during the current investigation (43.1 mg/kg) is significantly lower than the SL.

Based on the results of soil sampling conducted next to the existing and the assumed former in-ground hydraulic hoist locations, it does not appear that the soil near the hoists has been significantly impacted by TPH, and additional investigation with regards to the hoists appears unwarranted.

VOCs

A total of twelve (12) soil samples were collected at 5 foot intervals from 5 feet bgs to 30 feet bgs and analyzed for VOCs in two areas in which elevated PCE concentrations were detected in soil vapors collected by Tetra Tech (near Tetra Tech soil sample locations B-2 and B-15, Figure 16).

A total of eighteen (18) soil samples were also collected for analyses in areas of potential subsurface solvent sources including the former waste oil UST area south of the service canopy (samples from 5 foot intervals from 5 feet bgs to 30 feet bgs), from within the perimeter of two rectangular subsurface anomalies located within the service building (samples from 5 foot

intervals from 5 feet bgs to 30 feet bgs) and a concrete patched area (potential clarifier location) near the northwest corner of the service canopy (samples from 5 and 10 feet bgs).

- No VOCs were detected in the soil samples collected by FREY on August 30 and 31, 2021, nor in the soil samples collected by Tetra Tech on July 6, 2021.

Based on the results of laboratory analyses of soil for VOCs in two areas of elevated PCE concentrations in soil vapor and at potential on-Site subsurface sources for solvents to soil, additional investigation of soil samples for VOCs appears unwarranted.

6.6.2 Soil Vapor Sampling Results Discussion

Fifteen (15) unique soil vapor samples were collected from depths of 5, 15, and 30 feet bgs from two areas in which elevated PCE concentrations were detected in soil vapors collected by Tetra Tech (near Tetra Tech soil sample locations B-2 and B-15, Figure 16), from the former waste oil UST area, and from within the perimeter of two rectangular subsurface anomalies located within the service building.

Toluene and PCE were the only detected analytes in the 15 unique soil vapor samples collected from depths of 5, 15, and 30 feet and analyzed as part of the current investigation. A summary of detected VOCs in soil vapor samples collected on September 2, 2021, is provided in Table 9 along with corresponding ESLs for residential subslab soil gas and corresponding SLs and RSLs for residential air with applied attenuation factors of both 0.001 and 0.03.

- The maximum laboratory detected concentrations of toluene in soil vapor (33 ug/m^3) did not exceed any of the compared regulatory screening levels, the lowest of which is the SFBRWQCB ESL of 10,000 ug/m^3.

- Laboratory detected concentrations of PCE in soil vapor samples ranged from 381 ug/m^3 to 1,107 ug/m^3. In all of the soil vapor samples collected and analyzed, PCE exceeded the DTSC SL and US EPA RSL with an applied AF of 0.03 (15 ug/m^3 and 367 ug/m^3, respectively) and exceeded the SFBRWQCB ESL (15 ug/m^3).

- No significant lateral variation was exhibited by the concentrations of PCE detected in soil vapor collected from 5, 15, and 30 feet bgs in any of the soil vapor probes.

- Detected concentrations of PCE in soil vapor showed a slight increasing trend from east to west in each depth interval sampled. Figures 17, 18, and 19, show detected concentrations of PCE in soil vapor on September 2, 2021, at 5 feet bgs, 15 feet bgs, and 30 feet bgs, respectively.

Based on the results of recent soil vapor sampling, PCE concentrations in soil vapor beneath the Site appear somewhat homogeneous, vertically and laterally with only a slight decreasing trend in PCE concentrations from west to east across the Site. In general, detected concentrations of PCE is soil vapor appear relatively low and diffuse across the Site to indicate any specific on-Site point source. A Site sketch depicting PCE concentrations in soil vapor samples collected at the Site in 2015 and 2021 is included as Figure 20. Considering the historical information presented herein and the results of recent investigations, additional soil vapor sampling at the Site does not appear warranted.

7.0 PCE DISCUSSION AND POTENTIAL OFF-SITE SOURCES

7.1 OVERVIEW OF PCE IN SOIL, SOIL VAPOR, AND GROUNDWATER BENEATH THE SITE

A significant amount of environmental investigation has been conducted at the Site beginning with the removal of an 8,000-gallon aviation fuel UST in 1988. An additional 10,000-gallon gasoline UST and a 2,500-gallon waste oil UST were removed from the Site in 1995. The focus of subsurface investigations and remediation conducted at the Site between 1988 and 2018 was in regard to a release of petroleum hydrocarbons to soil from a former UST.

Beginning in January of 2005, analyses of soil and groundwater samples for VOCs became included in part of Site investigations.

- Over two-hundred twenty-five (225) soil samples collected across the Site and from depths ranging from 2.5 feet bgs to 85 feet bgs were analyzed for VOCs between January 2005 and April 2018 (Table 3). PCE was not detected above the laboratory detection limit in any of the soil samples analyzed for VOCs.

- Groundwater samples were analyzed for VOCs in twenty two (22) of the former Site groundwater monitoring wells on two (2) to thirteen (13) occasions between January 2005 and April 2018 (Table 5). PCE was detected on occasion in some of the Site wells at low concentrations of less than 5.0 ug/l and below regulatory actionable screening levels.

- During vapor extraction rebound testing conducted in October 2015, soil vapor samples were collected from seven (7) former Site wells with various screen intervals ranging between 15 to 35 feet bgs and 50 to 90 feet bgs and analyzed for VOCs. PCE was detected in soil vapor samples collected in October 2015 from each of the seven wells pre- and/or post-test at concentrations ranging from 101.75 to 657.97 ug/m^3 (Table 7A, Figure 15).

  In general, the results of recent subsurface soil and soil vapor sampling conducted by Tetra Tech and FREY, as described in Section 5.2 and 6.0, are similar to the results of soil and soil vapor sampling conducted at the Site between 2005 and 2018.

Due to the lack of PCE detected in soil samples and the limited low concentrations of PCE detected in groundwater beneath the Site (as exhibited by approximately 16 years of subsurface investigation at the Site), it does not appear that an on-Site point source would have contributed to the presence of PCE in soil vapor in a manner such that the distribution across the Site appears somewhat homogeneous horizontally and vertically. Additionally, the dissolved phase PCE concentrations in groundwater do not appear elevated enough to contribute to the elevated PCE concentrations exhibited in on-Site soil vapor.

7.2 POTENTIAL OFF-SITE SOURCES OF PCE

Based on the information presented herein, the potential that PCE has migrated in soil vapor onto the Site from an off-Site source is likely. The Site is located in an area that is mainly commercial and industrial with exception of a residential neighborhood to the south-southeast. In an effort to determine the potential source of PCE in soil vapor at the Site, FREY reviewed information for off-Site cleanup facility listings within one-mile of the Site on the SWRCB GeoTracker website (SWRCB, 2021) and on the DTSC EnviroStor website (DTSC, 2021).

- A search of the GeoTracker and EnviroStor websites shows that there are eight (8) open cleanup facilities located within a one-mile radius of the Site that are related to solvents and list PCE as one of the primary contaminants of concern. The majority of the facilities are located west and northwest of the Site, and one is shown east of the Site. The GeoTracker website lists all eight of the facilities as part of the Orange County North Basin Superfund Site (OCNBSS).

  The OCNBSS is considered one of the nation's most toxic hazardous waste sites and is described as a comingled groundwater plume of chlorinated solvents and other contaminants covering approximately five square miles beneath parts of the cities of Anaheim and Fullerton (EPA, 2021). In the past, the plume was also partially beneath part of the city of Placentia, but the plume has since moved southwest and is located just west of State College Boulevard. The EPA is currently working to further characterize the entire OCNBSS. The California DTSC and the Santa Ana Regional Water Quality Control Board (SA-RWQCB) continue to actively initiate and oversee facility-led investigation and remediation of subsurface contamination (soil and shallow groundwater) at several of the manufacturing facilities identified as possible contributors to the plume.

  FREY reviewed information provided on the GeoTracker website regarding some of the closest of the OCNBSS cleanup facilities (SWRCB, 2021). Many of the facilities have reported elevated concentrations of PCE in soil vapor that exist in soil vapor down to the water table. A summary of information from the closest of the currently identified OCNBSS facilities is below:

  - Investigations at Howmet (Howmet) Global Fastening Systems, located at 800 South State College Boulevard and approximately 1,750 feet northwest of the

Site, began in 1996. PCE was found in soil and vapor at the facility property, and soil vapor extraction (SVE) remediation was initiated at the property in 2009. According to soil vapor sampling conducted as part of remedial activities at the facility property, concentrations of PCE as high as 474,000 ug/m^3 and 111,000 ug/m^3 were reported in 20 foot depth samples collected from beneath the property in 2019 and 2020. Concentrations in the thousands and tens of thousands ug/m^3 were still detected in soil vapor samples collected post-remediation from depths up to 60 feet bgs as recent as January 29, 2021 (Geosyntec, 2021).

It is FREY's professional opinion that the potential exists for PCE in soil vapor to have diffused from an off-Site release of PCE to soil and migrated through subsurface soil (vadose zone consisting mainly of permeable sands from the ground surface to approximately 70 feet bgs) to the Site. Based on the concentrations of PCE in soil vapor at the Howmet property, its proximity to the Site, and the known distribution and concentrations of PCE in soil vapor beneath the Site, the possibility exists that former PCE releases at the Howmet property may have migrated in soil vapor to the Site. However, as noted above, the OCNBSS is still being characterized and information from other OCNBSS cleanup facilities and/or future so far unidentified facilities may indicate that soil vapor contaminated with PCE may exists regionally and outside of the OCNBSS groundwater plume boundaries.

8.0 CONCEPTUAL SITE MODEL

The potential risks to human health and the environment have been reviewed by FREY and are illustrated in a Site specific CSM receptor network flow diagram presented in Appendix F. The following sections discuss: 1) potential contaminant exposure routes; 2) potential migration pathways; 3) factors potentially affecting distribution of COPC in the subsurface; and 4) sensitive receptors.

8.1 POTENTIAL CONTAMINANT EXPOSURE ROUTES

Potential routes of exposure include inhalation, ingestion, and dermal contact. Inhalation routes are primarily from surface emissions of vapor-phase constituents, the volatilization of separate-phase hydrocarbons in the subsurface, and to a lesser degree from volatilization of hydrocarbons from the dissolved-phase. A potential inhalation route also exists from groundwater with dissolved-phase hydrocarbons pumped to the surface and used for domestic or irrigation purposes. Ingestion routes are through domestic use of groundwater or the unintended ingestion of soil from intrusive subsurface work on the Site, such as, trench digging for utility service or irrigation. Dermal routes of exposure are through contact with soil during construction or contact with groundwater used for domestic supply.

8.2 POTENTIAL MIGRATION PATHWAYS

The ASTM lists the following potential migration pathways: groundwater, surface water, soil vapor, air born particulates, soil contact, sediment, and biota (ASTM, 2014). These potential migration pathways are reviewed below.

8.2.1 Groundwater

The groundwater migration pathway involves the transport of dissolved-phase COPC by groundwater entrainment which can move petroleum hydrocarbons from the source in the direction of groundwater flow. The presence of petroleum hydrocarbons in soil at depth is a concern with respect to groundwater impact. However, as documented through twenty-one (21) years of groundwater monitoring and sampling, the extent of the plume of COPC in groundwater are well assessed, and the plume of COPC has diminished in size through remediation efforts and natural attenuation. The limits of the plume of COPC in groundwater (primarily benzene) are primarily restricted to the extent of the Site. The closest municipal drinking water well GSWC – Placentia well La Jolla #02, is located 1,750 feet east-southeast of the Site. Water quality data assessable on GeoTracker (SWRCB, 2021) for La Jolla #02 well, indicates that the well has not been impacted with petroleum hydrocarbons nor chlorinated solvents. Based on the groundwater sampling data, the groundwater migration pathway is considered incomplete.

8.2.2 Surface Water

Surface water transport could occur if soil with concentrations of COPC come in contact with storm water runoff. The Site is paved with concrete or asphalt. The properties surrounding the Site are mostly paved as well, and near surface soils (0 to 5-feet bgs) are not impacted with concentrations of COPC. Therefore, the surface water migration pathway is considered incomplete.

8.2.3 Soil Vapor

The soil vapor pathway occurs via air diffusion through interconnecting pore space. Adsorbed-phase COPC can volatilize and migrate (as vapor phase) both laterally and vertically from the source area. Additionally, utility trenches (zones of higher relative permeability) at the Site can potentially provide conduits for vapor transport. Based on soil vapor sampling results from July 6, 2021, and September 2, 2021, COPC are present in soil vapor at depths of 5 feet bgs beneath the Site in concentrations that may pose a health threat. Therefore, the soil vapor migration pathway is considered complete.

8.2.4 Airborne Particulates

The airborne particulates pathway occurs via the disturbance of soil with adsorbed-phase COPC caused by such activities as building demolition or subsurface building improvements (utility trenches, concrete floor removal) at the Site can potentially provide conduits for particulate inhalation. However, based on the results of historical soil sampling activities prior to active Site remediation and recent results from soil sampling on July 6, 2021 and August 30 and 31, 2021, which document low to non-detect concentrations of COPC in shallow soil, residual concentrations of COPC in soil do not pose a significant health threat, and the airborne particulates migration pathway is considered incomplete.

8.2.5 Soil Contact

The soil contact pathway involves direct contact with adsorbed contaminant, which could occur during excavation of soils as part of construction work. However, based on the results of historical soil sampling activities prior to active Site remediation and recent results from soil sampling on July 6, 2021 and August 30 and 31, 2021, documenting low to non-detect concentrations of COPC in shallow soil, residual concentrations of COPC in soil do not pose a significant health threat, and the soil contact pathway is considered incomplete.

8.2.6 Sediment

Sediment migration could be a potential concern during construction activities when primarily impervious surfaces are removed and rain or introduced surface water carriers sediment away. However, based on the results of historical soil sampling activities prior to active Site remediation and recent results from soil sampling on July 6, 2021 and August 30 and 31, 2021, documenting low to non-detect concentrations of COPC in shallow soil, the sediment migration pathway is incomplete.

8.2.7 Biota

The biotic migration pathway is incomplete because animals do not have access to impacted soils as near surface soils are not impacted CPOCs.

8.3 FACTORS POTENTIALLY AFFECTING DISTRIBUTION OF COPC IN THE SUBSURFACE

8.3.1 Geologic and Hydrogeologic Factors

Residual concentrations of petroleum hydrocarbons in soil beneath the Site appear to be primarily located above the groundwater table at depths between approximately 15 and 70 feet bgs (Tables 1 through 3, Figures 12 through 14). Given the relatively low permeability nature of the silty sands, silts, and clayey soils encountered at approximately 65 to 70 feet bgs and extending to depths of up to 95 feet bgs during previously conducted drilling investigations at the Site, which are generally present laterally below the remaining petroleum hydrocarbons in soil beneath the former UST, there is a very low likelihood that the residual petroleum hydrocarbons will further migrate vertically through the 20 to 25 foot thick aquitard.

No other subsurface features or preferential pathways that might affect subsurface groundwater flow beneath the Site are known to exist.

The presence of the minimal remaining COPC in subsurface soils has not further impacted groundwater based on historic groundwater monitoring and sampling data. Any remaining CPOC in soil and groundwater beneath the Site are anticipated to continue to decrease by natural attenuation.

8.3.2 Subsurface Utilities, Sewers, and Storm Drains

Sewers, storm drains, or other subsurface utilities could potentially enhance the migration of COPC in soil vapor toward potential sensitive receptors. Based on the results of recent soil vapor sampling conducted on July 6, 2021, and September 2, 2021, COPC (particularly PCE) are present in soil vapor 5 feet beneath the Site. The potential for COPC to migrate via utility trenches towards potential sensitive receptors exists.

8.4 SENSITIVE RECEPTORS

This section presents potential exposure scenarios to the identified sensitive receptors associated with the COPC beneath the Site. The two subcategories of receptors are listed as human receptors and ecological receptors (ASTM, 2014; DTSC, 2008; EPA, 1996).

8.4.1 Human Receptors

The Site is located in an area of commercial and residential development. The property is proposed for residential development. Human receptors include building residents and construction workers.

Based on the results of recent soil vapor sampling conducted on July 6, 2021, and September 2, 2021, COPC (particularly PCE) are present in soil vapor 5 feet beneath the Site in concentrations that may pose a health risk to building residents or construction workers.

8.4.2 Ecological Receptors

Ecological receptors include plants and animals associated with habitats or undeveloped environments found within the Site vicinity. COPC exist in an isolated extent in soil and groundwater beneath the Site at depths greater than 10 feet bgs. As such, the potential exposure pathway for ecological receptors at the Site is incomplete.

9.0 EVALUATION OF VAPOR INTRUSION RISK

The presence of VOCs in indoor air are typically evaluated as a potential threat to human health through vapor intrusion. Subsurface VOCs, whether in soil, soil vapor or groundwater, can migrate upward through the soil and enter into buildings causing unacceptable chemical exposure for building occupants. The soil vapor results from the July 6, 2021 and September 2, 2021 investigations were used to assess potential human health risks posed by subsurface vapor intrusion.

In order to evaluate this concern, FREY conducted a Site-specific evaluation to estimate the cumulative cancer risk and hazard index for the Site calculated in accordance with Step 3C of the DRAFT *Supplemental Guidance: Screening and Evaluating Vapor Intrusion* (DRAFT Supplemental VI Guidance) released in February 2020 (SFBRWQCB, 2020).

Using the Site's recent maximum soil vapor PCE concentration, the estimated cumulative cancer risk and hazard index for a resident at the Site is 9.33×10^{-5} and 1.00, respectively. Table 10 summarizes the results of the estimated cancer risk and hazard index for subslab vapor intrusion at the Site.

According to the DRAFT Supplemental VI Guidance, if the initial evaluation of vapor intrusion indicates a cancer risk between 1×10^{-6} and 1×10^{-4} and a hazard index less than or equal to 1 then the risk management decision is "Determine Appropriate Action". Possible actions listed by the DRAFT Supplemental VI Guidance include: none; institutional control; additional investigation/sampling; monitoring; refine risk assessment; mitigation; and remediation (SFBRWQCB, 2020).

10.0 CONCLUSIONS AND RECOMMENDATIONS

A significant amount of assessment and remediation work has been conducted at the Site since 1988. The extent of COPC in soil, soil vapor, and groundwater present beneath the Site, whether due to historical Site use(s) or the migration of COPC from off-Site sources, have been very well assessed. Concentrations of PCE is shallow soil vapor that exceed some regulatory criteria appear to be spread throughout the Site and appear to decrease slightly from west to east across the Site as shown on Tetra Tech figure presented in Appendix B and Figures 17, 18, and 19. The source of this PCE as well as other COPC in shallow soil vapor in the area of the Site is unknown, but it may be related to the Site's relative location to the OCNBSS and proximity to various facilities being investigated and remediated as part of the Superfund Area as well as so far unidentified facilities with PCE releases to subsurface soil. Regardless of the source, COPC in soil vapor are sufficiently assessed through historical and recent assessment of the Site and, soil vapor, which as it pertains to proposed future development, is adequately assessed.

Recalcitrant concentrations of COPC in soil, groundwater, and soil vapor have been demonstrated to prove minimal to no risk to sensitive receptors except for the potential risk of PCE in soil vapor to intrude into future residential buildings.

Based on the information reviewed as presented in this CSM, it is FREY's professional judgement that no additional environmental assessment or active remediation is required at this time for the Site. However, FREY recommends that, based on the occurrence of PCE concentrations in soil vapor as demonstrated from the most recent investigations conducted on July 6, 2021, and September 2, 2021, as well as during vapor rebound testing conducting previously on October 13, 14, and 15, 2015, a soil vapor intrusion barrier and active venting system should be installed for proposed future residential buildings located on the Site.

11.0 LIMITATIONS

The judgments described in this document are professional opinions based solely within the limits of the scope of work authorized and pertain to conditions judged to be present or applicable at the time the work was performed. Future conditions may differ from those described herein, and this document is not intended for future evaluations of this Site unless an update is conducted by a consultant familiar with environmental assessments.

This document was compiled from information supplied to FREY from outside sources, and other information that is in the public domain. FREY makes no warranty as to the accuracy of statements made by others, which may be contained in this report, nor are any other warranties or guarantees, expressed or implied, included or intended by the report, except that it has been prepared in accordance with the current accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professional consultants or firms performing similar services. Future environmental investigations may reveal site conditions not indicated in the data reviewed by FREY. Additionally, changes in standards or regulations applicable to the Site may occur. The findings of this document may be partially or wholly invalidated by changes of which FREY is not aware or has not had the opportunity to evaluate.

Environmental assessments provide an additional source on information regarding the environmental conditions of a particular property or facility. The report to the Client is a professional opinion and judgment, dependent upon FREY's knowledge and information obtained during the course of performance of the services.

Should you have any questions regarding this CSM report, please contact us at (949) 723-1645.

Sincerely,
FREY Environmental, Inc.

Notes:

[1] Analyzed for Total Petroleum Hydrocarons as gasoline (TPH-G) deisel (TPH-D) or oil (TPG-O) by EPA Method No. 8015M.
[2] Analyzed by EPA Method No. 8260B.
[3] Ananlyzed by DHS Organic Lead Method.

-- = Not Analyzed
ND<0.50 = Not detected at or above the indicated reporting limit.
J = estimated value

Notes:

[1] Analyzed for Total Petroleum Hydrocarons as gasoline (TPH-G) deisel (TPH-D) or oil (TPG-O) by EPA Method No. 8015M.
[2] Analyzed by EPA Method No. 8260B.
[3] Ananlyzed by DHS Organic Lead Method.

Notes:
[1] ft-msl = feet relative to mean sea level
[2] Depth to groundwater as measured from the top of well casing.
[3] Analyzed for total petroleum hydrocarbons as gasoline (TPHg) and diesel (TPHd) by modified EPA Method No. 8015M
[4] Analyzed for total purgable petroleum hydrocarbons (TTPH), benzene, toluene, ethylbenzene, total xylenes (BTEX), and fuel oxygenates, by EPA Method No. 8260B.
* = Top of casing elevations for well from January 2000 Groundwater Monitoring Report by SCS Engineers dated 1/14/2000. Wells have not been resurveyed by FREY.
** = Obstruction was observed in well during the fourth quarter 2013 groundwater monitoring and sampling event.

(ug/l)=micrograms per liter
ND<0.50 = Not Detected at or above the laboratory detection limit.
NA = not available
-- = not analyzed
bgs = below the ground surface.

Mr. Brian Chuchua
290 South Mohler Drive
Anaheim Hills, CA 92808

Subject: Remedial Action Completion Certification

Re: Underground Storage Tank (UST) Case
Brian Chuchua Jeep
777 West Orangethorpe Avenue
Placentia, California
OCHCA Case #88UT111

Dear Mr. Chuchua:

This letter confirms the completion of site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this Agency was accurate and representative of site conditions, this Agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required. This notice is issued pursuant to subdivision (h) of Section 25296.10 of the Health and Safety Code.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or,
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Please contact Geniece Higgins at (714) 433-6260 if you have any questions regarding this matter.

Sincerely,

Christine Lane, REHS
Interim Director
Environmental Health

Additional Information

Maximum Documented Contaminant Concentrations - - Before and After Cleanup

Contaminant	Soil (mg/kg)		Water (µg/L)		Cont.	Soil (mg/kg)		Water (µg/L)	
	Before	After	Before	After		Before	After	Before	After
TPHaf	2,806	NA	NA	NA	MTBE	NA	<0.0048	1,300	<1.0
TPHg	5,898*	1,980	1,700,000	2,500	TBA	NA	<0.02	15	<10
TPHd	NA	2,000	880,000	5,100	DIPE	NA	<0.05	<1.0	<2.0
Benzene	169*	0.88	30,300	98	TAME	NA	<0.05	<1.0	<2.0
Toluene	3,060*	14.4	39,000	<1.0	Naphthalene	NA	7.6	2,300	120
Ethylbenzene	46	22.4	34,000	450	1,2,4,TMB	NA	102	12,000	99
Xylenes	200*	110.8	120,000	150	1,3,5,TMB	NA	41.4	2,900	55

Notes: Cont. = contaminant, NA = Not Available, TPH = total petroleum hydrocarbons, TPHaf = TPH as aviation fuel, TPHg = TPH as gasoline, TPHd = TPH as diesel fuel, TMB = trimethyl-benzene
*Samples collected from the tank bottom during tank excavation in 1988. "Before" soil and groundwater contaminant concentrations represent historical maximum concentrations reported at the site during all phases of investigation. TPHaf was analyzed only in soil during 1991 and 1997. "After" soil contaminant concentrations represent maximum detections, on and off-site, following site remediation. "After" groundwater contaminant concentrations represent data collected from the most recent sampling event conducted in April 2018.

Support for Low Threat Closure Policy Checklist

The site is located on the northeast corner of the intersection of West Orangethorpe Avenue and South Placentia Avenue in Placentia, California. The site is currently operating as Premier automotive dealership and service center. The site is bound to the north and east by commercial/industrial facilities, to the south and west by West Orangethorpe Avenue and South Placentia Avenue, respectively. The site is located in the Forebay Area of the Orange County Groundwater Basin. Historically, depth to groundwater has ranged from 71 to 95 feet below grade surface (bgs) within the semi-perched aquifer zone, and ranged from 98 to 134 feet bgs within the deeper Talbert Aquifer. Historical groundwater flow gradient and direction is variable within the semi-perched aquifer and within the Talbert Aquifer was estimated to be toward the southwest with an estimated gradient ranging from 0.035 to 0.07 feet/foot.

Cleanup case #88UT111 was opened by OCHCA in June 1988 based on the results of soil sampling during tank removal and excavation activities in April 28, 1988. The former underground storage tank (UST) system consisted of one 10,000-gallon, aviation fuel, fiberglass UST, one dispenser island, and associated piping. During the tank removal a visible crack was observed in the bottom of the southern end of the UST. Soil samples from northern and southern end of the tank were collected at 14 feet bgs with maximum concentrations of petroleum hydrocarbons reported at 1,330 milligrams per kilogram (mg/kg) TPHg, 15.2 mg/kg benzene, 139 mg/kg toluene, 1.47 mg/kg ethylbenzene, and 0.1 mg/kg xylenes. On May 16, 1988, two additional soil samples from the southwest corner and the center of the tank excavation at 14 feet bgs were collected with maximum concentrations of petroleum hydrocarbons reported in the center of the former tank at 5,898 mg/kg TPHg, 169 mg/kg benzene, 3,060 mg/kg toluene, 43 mg/kg ethylbenzene, and 200 mg/kg xylenes.

In July 1988, six borings (AF1 through AF5 and CC) were advanced up to 75 feet bgs surrounding the former UST. TPHg was reported at a maximum concentration of 4,472 mg/kg in boring AF5 at 43.3 feet bgs. BTEX were not detected in any of the samples collected during this investigation.

Between October 1988 and January 1991, four soil borings (GW-1 through GW-4) were advanced to depths ranging from 66.5 up to 99.5 feet bgs. Soil borings GW-1 and GW-2 were converted to vapor extraction wells screened from 20 to 40 and 20 to 70 feet, respectively. Soil boring GW-3 was abandoned and GW-4 was converted into an air injection well screened from 45 to 65 feet. TPHaf was reported at a maximum concentration of 2,806 mg/kg in boring GW-3 at 50 feet bgs. Maximum concentrations of BTX were reported at 19.6 mg/kg, 64.9 mg/kg,, and 128.1 mg/kg, respectively, in boring GW-1 at 65 feet bgs and maximum concentration of ethyl benzene was reported at 46 mg/kg in boring GW-3.

In February 1990, four geotechnical borings (B-1 through B-4) were drilled immediately adjacent to the north of the site by Geo-Etka Inc. No environmental soil samples were collected during this investigation. In addition, soil borings VE-1A and VE-2A were drilled and converted to remedial wells prior to April 1993 (based on reference to the wells in an April 7, 1993 report); no soil data or construction details were available for review.

In April 1995, four soil borings, also identified as B1 through B4, were advanced up to 80 feet bgs within and surrounding the former tank cavity following soil vapor extraction remediation (discussed below). The highest concentrations of TPHg (102 mg/kg) was detected at 30 feet bgs, benzene (0.635 mg/kg), toluene (1.043 mg/kg), and ethyl-benzene (0.156 mg/kg) at 80 feet, and total xylenes (1.431 mg/kg) at 70 feet were detected in Boring B3. The samples were not analyzed for fuel oxygenates.

Between May 1997 and August 2014, twenty-three groundwater monitoring wells (MW1 through MW5 and MW7 through MW24) and one soil boring FB1 were drilled. Well depths ranged from 76.5 feet to 150 feet bgs. TPHg was reported at a maximum concentration of 1,980 mg/kg in MW15 at 71.5 feet bgs. TPHaf was reported at a maximum concentration of 855 mg/kg in borehole MW4 at 75 feet bgs. TPHd was reported at a maximum concentration of 2,000 mg/kg in borehole MW19 at 65 feet bgs. Benzene was reported at a maximum concentration of 0.88 mg/kg in the 81-foot bgs sample collected from MW12. Toluene was reported at a maximum concentration of 14.4 mg/kg in the 78-foot bgs sample collected from MW11. Ethylbenzene and total xylenes were reported at maximum concentrations of 22.4 mg/kg and 110.8 mg/kg, respectively in the 71.5-foot bgs sample collected from MW15. On June 2015, groundwater monitoring well MW15 (screened from 66-86 feet) was abandoned and was replaced with a shallower screened well MW15R (screened from 59-79 feet). On September 2015, soil boring VE1s/d was drilled to a final depth of 66.5 feet bgs and converted to a dual-nested vapor extraction well (screened from 15-35 and 50-65 feet bgs). Soil samples collected from 2.5 feet to 66.5 feet bgs did not contain detectable concentrations of petroleum hydrocarbons.

SVE was conducted in and around the former tank cavity between April 1991 and May 1992 and removed approximately 584 gallons (3,504 pounds) of vapor phase hydrocarbons. However, removal calculations were based on field measurements (organic vapor analyzer), rather than laboratory data, which may have resulted in an overestimation of the mass removed. On July 2007, an 8-hour VE pilot test was conducted in the source area wells (MW-1 through MW-3) screened from 70 to 90 feet bgs. Vapor excavation was found to be not feasible due to insignificant vapor recovery (0.007 pounds per hour). In October 2015, additional VE testing was conducted using wells MW1, MW2, MW9, MW20, MW18, and MW15R and vapor extraction well VE1s and VE1d. Mass removal rates ranging from 0.001 to 0.107 lb/hr during the 11 hour test with the majority of the mass removed from well MW9.

Groundwater: Groundwater sampling in April 2018 reported the following maximum detections: 2,500 µg/L TPHg (MW9), 5,100 µg/L TPHd (MW9), 98 µg/L benzene (MW2), 450 µg/L ethylbenzene (MW2), and 150 µg/L total xylenes (MW4). The site maximum concentration of naphthalene was detected in source area well MW2 at 2,300 µg/L during the October 2017 sampling and at 120 µg/L during the most recent sampling event in April 2018. Of the 23 site wells, seventeen wells were screened in the semi-perched zone (ranging from 59 to 90 feet) and six wells (MW10 through MW14 and MW16) were screened in the Talbert Aquifer (ranging from 120 to 143 feet). Historically, dissolved-phase hydrocarbons in groundwater were detected in the wells located immediately south-southwest of the former UST (MW1), and offsite wells (MW2, and MW4), and offsite to west (MW4, MW5, and MW15). Previously detected maximum concentrations (shown in the above table) of TPHg and BTEX were observed in wells MW3 and MW5. Free product was not observed in any of the wells.

Depth to water in the site vicinity is variable due to recharge water in semi-perched zone. Actual groundwater in Talbert Aquifer water widely fluctuates over time. Historically, groundwater flow direction beneath the site has variable from south to northwest.

According to information provided by Orange County Water District, there are no groundwater production wells within 1,000 feet of the site. The nearest groundwater production well is SCWC-PLJ2

located approximately 1,300 feet east-southeast of the site. The nearest surface water body is Carbon Creek, a concrete lined drainage channel located 550 feet to the south-southwest (hydrogeologically down or cross gradient) of the site. Carbon Creek flows into the Placentia Retarding Basin, an unlined basin mainly used for groundwater recharge generated from percolation of storm flows and flood control. Placentia Retarding Basin is located approximately 1,000 feet to the southwest of the site.

Reference:
FREY, Groundwater Monitoring Well Monitoring and Sampling Second Quarter 2018 LTCP Evaluation and Request for No Further Action dated May 3, 2018

Vapor Intrusion to Indoor Air: In June 2015, six vapor probes (SV1 through SV6) were installed to 5.5 feet bgs. The probes were placed along the northern site boundary, near the on-site service building to the east, and in the source area near the former UST, to evaluate potential vapor intrusion to the commercial structures. No TPHg or VOCs were detected in the soil vapor samples.

Reference:
FREY, Shallow Soil Vapor Investigation dated September 1, 2015

Direct Contact and Outdoor Air Exposure: Confirmation soil samples were collected in and around the former UST cavity (source area) from borings MW17 through MW21, VE1, and FB1 at depths ranging from 2.5 to 85 feet bgs. Results indicated low to non-detectable levels of petroleum hydrocarbons and fuel oxygenates to total depth. Results of shallow sampling (2.5 to 10 feet bgs) did not report any detections of benzene, ethylbenzene or naphthalene; therefore, did not exceed maximum concentrations of petroleum constituents listed under Table 1 of the UST LTCP.

Reference:
FREY, Post-Remediation Soil Boring and Vapor Extraction Well Installation dated October 19, 2015

LAND USE CONSIDERATIONS: The site is currently developed for commercial use as auto dealership/service building. Site conditions should be reviewed if land use changes.

CLOSURE POLICY

THIS VERSION IS FINAL AS OF 1/8/2019 — CHECKLIST INITIATED ON 4/24/2013 — PRINT THIS FORM — CLOSURE POLICY HISTORY

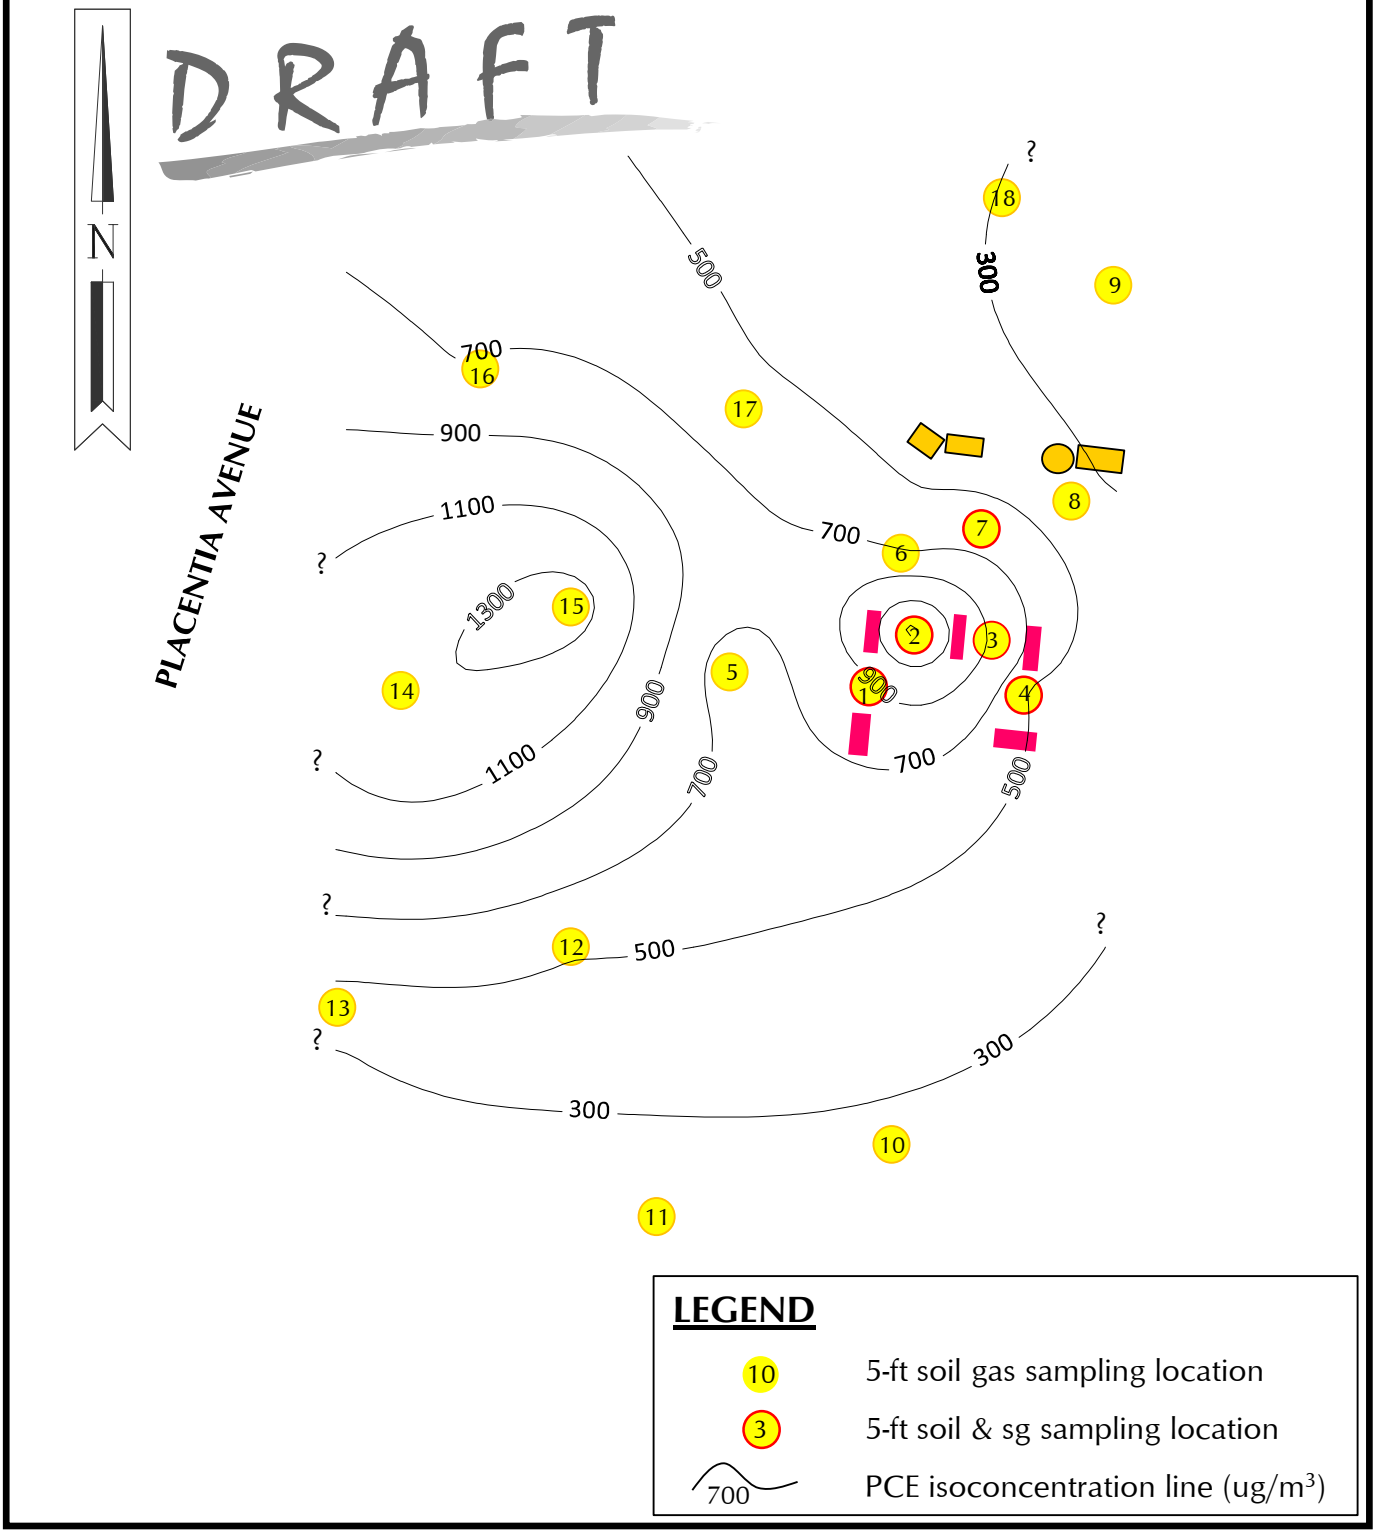

General Criteria - *The site satisfies the policy general criteria* - CLEAR SECTION ANSWERS		**YES**
a. Is the unauthorized release located within the service area of a public water system? **Name of Water System :** Golden State Water Company		(•) YES ( ) NO
b. The unauthorized release consists only of petroleum (info).		(•) YES ( ) NO
c. The unauthorized ("primary") release from the UST system has been stopped.		(•) YES ( ) NO
d. Free product has been removed to the maximum extent practicable (info).	( ) FP Not Encountered	(•) YES ( ) NO
e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed (info).		(•) YES ( ) NO
f. Secondary source has been removed to the extent practicable (info).		(•) YES ( ) NO
g. Soil or groundwater has been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15.	( ) Not Required	(•) YES ( ) NO
h. Does a nuisance exist, as defined by Water Code section 13050.		( ) YES (•) NO
1. Media-Specific Criteria: Groundwater - *The contaminant plume that exceeds water quality objectives is stable or decreasing in areal extent, and meets all of the additional characteristics of one of the five classes of sites listed below.* - CLEAR SECTION ANSWERS		**YES**
EXCEPTION - Soil Only Case (Release has not Affected Groundwater - Info)		( ) YES (•) NO
Does the site meet any of the Groundwater specific criteria scenarios?		(•) YES ( ) NO
1.1 - The contaminant plume that exceeds water quality objectives is <100 feet in length. There is no free product. The nearest existing water supply well or surface water body is >250 feet from the defined plume boundary.		(•) YES ( ) NO
2. Media Specific Criteria: Petroleum Vapor Intrusion to Indoor Air - *The site is considered low-threat for the vapor-intrusion-to-air pathway if site-specific conditions satisfy items 2a, 2b, or 2c* - CLEAR SECTION ANSWERS		**YES**
EXCEPTION - Active Commercial Petroleum Fueling Facility		( ) YES (•) NO
Does the site meet any of the Petroleum Vapor Intrusion to Indoor Air specific criteria scenarios?		(•) YES ( ) NO
2a - Scenario 4 (example): Direct Measurement of Soil Gas Concentrations		**YES**
i. Soil Gas Sampling Locations – No Bioattenuation Zone:		
- Beneath or adjacent to an existing building: Soil gas sample is collected at least 5 feet below the bottom of the building foundation.		( ) YES ( ) NO
- Future construction: The soil gas sample shall be collected from at least 5 feet below the ground surface (bgs).		( ) YES ( ) NO
ii. Soil Gas Sampling Locations – with Bioattenuation Zone: The criteria in Column A in the Soil Gas Criteria table (page 5 of the Policy) apply if the following requirements for a bioattenuation zone are satisfied:		**YES**
- Minimum of 5 feet of soil between the soil vapor measurement and the foundation of an existing or ground surface of future construction.		(•) YES ( ) NO
- TPH (TPHg + TPHd) is <100 mg/kg (measured in at least two depths within the 5-ft zone)		(•) YES ( ) NO
- Oxygen is ≥ 4% measured at the bottom of the 5-ft zone.		(•) YES ( ) NO
3. Media Specific Criteria: Direct Contact and Outdoor Air Exposure - *The site is considered low-threat for direct contact and outdoor air exposure if it meets 1, 2, or 3 below.* - CLEAR SECTION ANSWERS		**YES**
EXCEPTION - The upper 10 feet of soil is free of petroleum contamination		( ) YES (•) NO
Does the site meet any of the Direct Contact and Outdoor Air Exposure criteria scenarios?		(•) YES ( ) NO
3(a) - Maximum concentrations of petroleum constituents in soil are less than or equal to those listed in the following table (LINK) for the specified depth below ground surface.		(•) YES ( ) NO
Additional Information		
This case should be kept OPEN in spite of meeting policy criteria.		( ) YES (•) NO
Has this LTCP Checklist been updated for FY 18/19?		(•) YES ( ) NO

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No tracer was detected in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of collection.

Approval: _____

1.0 INTRODUCTION

On August 13th and 16th, 2021, Spectrum Geophysics conducted a geophysical investigation at a commercial property located at 777 West Orangethorpe Ave. in Placentia, California (hereinafter referred to as the Property).

The purpose of the investigation was to locate detectable steel underground storage tanks (USTs). The original plan was for Spectrum to investigate two areas- as designated by Mollie Banh of Frey Environmental. Area 1 was an approximately 140-foot by 165-foot asphalt-paved outside area in a parking lot west of the building at the Property (the Building), and Area 2 was an approximately 150-foot by 150-foot area inside the Building. However, because of parked Humvees and other vehicles, trailers and other debris located inside the Building, the scope of investigation was reduced to the original dimensions of Area 1 and just two small rectangular areas within Area 2: one 20-foot by 65-foot area in the southern portion of the Building (designated Grid 1) and one 22-foot by 48-foot area in the northern portion of the Building (designated Grid 2). These investigation areas are shown in Figure 1. Based on the objective a Geonics EM-61 was used primarily to investigation for USTs in Area 1; however, 3D GPR data were collected within a small area under a metallic canopy (designated Grid 3) in Area 1. 3D ground penetrating radar (GPR) methods were used to investigate for USTs in Area 2.

The survey was situated in an area mapped as Quaternary alluvium. It is likely that a few feet of artificial fill overly the Quaternary deposits within the survey area. The depth to the water table was expected be below the maximum depth of investigation; however, moisture in the upper five feet of soil can contribute to corrosion of metallic survey targets and signal attenuation in ground penetrating radar data.

Site interferences to Area 1 included light poles, chain-link fencing, the metallic track to the entrance gate, parked vehicles, a raised concrete pad, sheared metallic posts, reinforced block walls and an overhead canopy. Site interferences in Area 2 included several Humvees and vehicles parked inside the Building, piles of debris, steel drain lines on the concrete floor, and reinforced concrete.

2.0 EQUIPMENT

The equipment used during this investigation consisted of a Geonics EM-61 high-sensitivity metal detector (EM-61), a GSSI Utility Scan 350HS digital hyperstacking antenna unit (Utility Scan), a Sensors & Software Noggin "Smart Cart" gound penetrating radar (GPR) unit coupled to a 500-MHz antenna, a Fisher TW-6 M-Scope shallow-focus metal detector (M-Scope) and a RadioDetection RD4000 electromagnetic utility locator (RD4000). A Trimble Pro 6H GPS unit and a digital field computer were used during EM-61 data acquisition.

3.0 METHODS AND FIELD PROCEDURES

3.1 EM-61 High Sensitivity Metal Detector

The EM-61 high-sensitivity metal detector was used in Area 1 in an effort to delineate areas where metallic objects (such as underground storage tanks and buried metal piping) may be buried. The EM-61 transmitter generates short pulses of a primary magnetic field that, in turn, induces electromagnetic currents in nearby metallic objects. Between pulses, the two receiver coils measure the decay of these electromagnetic currents in millivolts (mV). The measured values are proportional to the metal content (ferrous and non-ferrous) of the nearby objects.

EM-61 data acquisition (archive photo)

Prior to data acquisition the EM-61 battery level was checked and found to be at a proper level for data acquisition. After the EM-61 had a few minutes to warm up, the unit was nulled in a location with more than four meters of separation between the coils and any known metallic objects. A cable-shake test was performed to assure the cables were in good working condition and the connectors were fastened properly. Finally, a static test was performed in which the instrument response to soil and a metal bolt was monitored for amplitude and consistency of the readings. The EM-61 used for this investigation was found to be working as expected.

Once the EM-61 was found to be operating properly, EM-61 readings were collected along roughly parallel survey lines oriented northeast-southwest spaced approximately 5 feet apart within the area of the investigation. These measurements were recorded at a rate of 5 readings per second and stored in the Archer digital field computer. GPS positions were streamed into the field computer at one second intervals, and the EM-61 measurements were interpolated between GPS positions. This resulted in a 1-foot station spacing on average. Survey lines were displayed on the field computer in real time for navigation. If the submeter accuracy was lost during data acquisition an alarm from the field computer was sounded and data acquisition was paused until accuracy was regained. These data were processed in the field and used to generate contour maps to assist in identifying anomalies that may be caused by large buried metallic objects such as USTs. Linear EM-61 anomalies were relocated with the utility locating equipment in an attempt to determine their source.

Top or bottom coil EM-61 data can be useful for identifying near-surface metallic objects; although, the top coil generally has a larger response than the bottom coil to deeply buried objects. Top coil data are also useful for identifying buried utilities and other shallow linear features. The differential data (bottom coil data subtracted from the top coil data) was used during this survey to distinguish deeper targets (such as metallic USTs) from shallow ones such as a vault lid or scrap metal. Utilization of the differential data allows for the suppression of near surface targets that might mask the response from deeper targets of interest.

3.2 Ground Penetrating Radar

EM-61 anomalies within Area 1 that could not be attributed to aboveground cultural features or detected underground utilities were further investigated using GPR methods. As previously mentioned, as small area under a metallic canopy (Grid 3) was investigated with 3D GPR methods due to interference concerns from the metallic canopy. In addition, 3D GPR data were collected along the concrete floor of the warehouse area of the Building within Grids 1 and 2 in Area 2. This was necessary because useful EM-61 data cannot be collected within buildings or in areas of reinforced concrete, due to electromagnetic interference.

GPR data acquisition (archive photo)

During GPR surveys, an antenna containing both a transmitter and a receiver is mounted on a cart with wheels and is pushed along the ground surface. During data collection the transmitter radiates short pulses of high-frequency (center frequencies of 350-MHz or 500-MHz) electromagnetic energy into the ground. The electromagnetic energy (or wave) propagates into the subsurface at a velocity that is dependent on the relative dielectric constant of the medium through which the wave travels. When the wave encounters the interface of two materials having different electrical properties, a portion of the energy is reflected back to the surface. The contrast in velocity between the two media can be quantified by a reflection coefficient at the media interface, where the magnitude of the reflection coefficient increases as the contrast in velocity increases (which typically represents an increase in the contrast in electrical conductivity). A large contrast in electrical conductivity between two mediums (soil and air for example) will produce a high-amplitude reflection. If the contrast in electrical conductivity between two materials is low (asphalt and sand for example) the resulting reflector may be weak or undetectable. When the target of a GPR survey is metallic, the characteristic response is readily identified as a high amplitude feature, because the contrast is a maximum and the electromagnetic wave is completely reflected upon reaching the metallic object (much the way a mirror works).

The reflected GPR signal is detected at a receiver antenna, transmitted to a control unit and viewed on the computer screen as the data are acquired. Reflected GPR waves are received at the antenna at a time (in nanoseconds) that is related to the speed of the signal (controlled by electrical properties of the soil) and the depth of the reflecting interface, where later times typically represent greater depths to reflectors. The data are stored electronically and subsequently processed, where they can be viewed on a laptop computer.

The GPR method can be effective for detecting geologic layering, metallic and nonmetallic utilities, USTs, excavations and voids beneath paved areas or concrete walls.

3.2.1 GPR Procedures

During this investigation, the Spectrum crew established a 4-foot X 4- foot grid using a survey chain and surveyor's chalk within each of Grids 1, 2 and 3. Once established, semi-continuous GPR profiles were collected within the gridded area using the appropriate antenna and a 50-nanosecond range along parallel transects spaced 2 feet apart. The Utility Scan unit was used for GPR data collection within Grids 1 and 2 in order to achieve greater penetration and shielding for areas within the Building. The Smart Cart with 500-MHz antenna was used for GPR data collection within Grid 3 under the canopy. GPR data were collected in wheel mode, where a digital odometer connected to the wheel of the GPR cart is used to track the distance travelled by the antenna. Although the data were collected in individual 2D files, the short distance between each profile and the high resolution of the data allowed subsequent 3D processing using GPR-Slice™ V7.0 by Dean Goodman (2009). GPR-Slice™ allows the user to combine 2D radargrams to generate a 3D volume or a series of map view time slices - each representing a greater depth range than the previous slice. These time slice maps are used to show the location, size and approximate depth of GPR anomalies, where subtle anomalies that may not be distinguished between adjacent GPR profiles in 2D can be detected with 3D time slice maps. During data collection the areal extents and/or surface traces of detected features were marked on the ground with spray paint.

Once collected, GPR data were downloaded, saved to a ".DZT" or ".DT" file, and processed using GPR-Slice™. GPR-Slice™ creates time-slice plan view maps representing amplitude variations of the GPR signal for small time intervals – which can be converted to depth intervals if the dielectric constant is known. The processing flow in GPR-Slice™ is as follows:

- Enter the information parameters for the GPR data set, such as name of project, time range for the data, GPR system used, navigation system used, etc.
- Enter the survey geometry for each profile relative to the survey grid
- Set "time zero" for each profile
- Apply a gain function to the data
- Slice and resample
- Grid the GPR slices
- Display and save data

The end product of GPR-Slice™ is several (typically 5 to 10) time-slice plan-view maps representing GPR signal intensity over background soils for early to increasingly later time ranges, representing smaller to increasingly greater depths below the ground surface.

For this project a series of 5- or 6- nanosecond time slices were generated and contoured for each grid based on GPR signal amplitude for the area of investigation. A total of 8 or 9 time

slices were generated from the 2D radargrams acquired, where each time slice represents approximately 0.9 vertical feet. The contour maps were used to identify GPR anomalies with signatures that might be expected for subsurface USTs. All 2D GPR profiles and time slices were reviewed for features of interest in each of Grids 1, 2 and 3.

3.3 Electromagnetic Utility Location

During this investigation, active electromagnetic (EM) utility-locating methods were used to relocate linear EM-61 anomalies and to delineate the surface trace of detectable underground utilities.

Active locating was initiated by transmitting an alternating current at a known frequency (8 kHz for this site) on a street lighting line exposed at the surface. A receiver, tuned to 8 kHz, was then used to locate the signal maxima (or surface trace) of the applied signal. The street lighting did not pass through the area of investigation and was not mapped.

The Fisher M-Scope metal detector was used to relocate shallow buried metallic features identified in the EM-61 data. The M-Scope has a transmitter and a receiver at the ends of a short boom. The transmitter emits a radio-frequency source signal that induces a secondary magnetic field in metallic material in its immediate vicinity. The receiver measures the signal strength of this secondary magnetic field and emits an audible response, the volume and pitch of which increase in the presence of metallic material. The sensitivity of the M-Scope allows the operator to locate the lateral boundaries of a metallic object.

Detected utilities of known type were marked on the ground with surveyor's paint using the color code found below.

Table 1: APWA Color Code

Utility	Color
Electric	Red
Telephone/Communication	Orange
Storm Drain/Sanitary Sewer	Green
Natural Gas	Yellow
Water	Blue
Unknown Conduit	Pink

4.0 RESULTS

A geophysical interpretation map is presented in Figure 1. Contour Maps of the EM-61 top coil and differential data for Area 1 are presented in Figures 2 and 3, respectively. Representative GPR-Slice™ maps for Grids 1 and 2 are presented in Figure 4, and a representative GPR-Slice™ map for Grid 3 is presented in Figure 5. A discussion of the findings of the investigation may be found below.

4.1 EM-61

The color scale in the contour map of the EM-61 differential data displays the magnitudes of the measured EM-61 values where blue and green colors represent negative readings (indicative of surface metal), light green to yellow colors represent background readings and orange to red to pink colors represent increasing values above background. Due to the sensitivity of the EM-61, anomalies are usually exaggerated compared to the actual dimensions of the source metal. It is common for a sheared fence post to produce a 7-foot by 7-foot EM-61 anomaly while a 500-gallon UST buried 4 feet below ground surface can produce an EM-61 anomaly with dimensions of 15 feet by 15 feet. The findings of the survey are discussed below.

Based on a comparison between the EM-61 top coil and the differential data one significant anomaly was detected that could not be attributed solely to above ground cultural features and/or detectable utilities. This anomaly is identified as ***Anomaly A*** and is discussed below.

Anomaly A

Anomaly A is an 18-foot by 17-foot top anomaly that is evident in both the top coil and the differential data between eastings 6066100 and 6066118 and northings 2260753 and 2260770; this anomaly is identified in Figure1 with a dashed green line and in Figures 2 and 3 with a dashed dark blue boundary line. ***Anomaly A*** could be caused by a light pole in the center of the anomaly; however, this anomaly was selected because, while the amplitude in top coil is similar between the two light poles, the amplitude in differential is quite high (140 millivolts) at ***Anomaly A*** when compared with that from the light pole to the northeast. In fact, the differential amplitude at ***Anomaly A*** is twice as high – indicating there may be a buried metallic feature beneath the light pole. ***Anomaly A*** was identified subsequent to the investigation; therefore, no follow up was done in the field for this anomaly.

The other high amplitude areas evident in Figure 3 can be explained by surface features such as chain link fencing, parked cars, the loading ramp and reinforced concrete. A number of conduits were also traced in Area 1; these utilities and conduits are indicated in Figure 1.

4.2 GPR

The color scales in the GPR-Slice™ maps in Figures 4 and 5 display the amplitudes of the recorded GPR signal in the appropriate slice, where blue colors represent background amplitudes (typical subsurface soils), light green to yellow colors represent moderate amplitudes and orange to red colors represent high amplitudes. Generally, subsurface metallic features such as USTs exhibit moderate to high amplitudes as there is a sharp contrast in electrical properties between background soils and metal. In addition, in areas where the concrete or asphalt paving is reinforced with steel rebar or mesh the reinforcement will cause high amplitude "ringing" in the data, and a mottled appearance in the GPR- Slice™ maps. In order to verify possible sources of GPR-Slice™ map anomalies, and as an extra check on the data, the GPR profiles collected within Grids 1, 2 and 3 were reviewed as well as the time slices.

Review of GPR profiles and time slices for Grids 1 and 2 verified ringing in the surface/near surface layers caused by the reinforced concrete mesh. Because of this ringing, it was a bit more difficult to discern anomalies that could be caused by subsurface features beneath the paving; however, one anomalous area was identified in the Slice data and profiles for Grid 2; this anomaly is designated as ***Anomaly B.*** This anomaly is discussed below.

Anomaly B

Anomaly B is contained within a 13-foot X 8-foot area, is found between Lines 10 and 23 and between Stations 10 and 18 and is characterized by a rectangular-shaped moderate to high amplitude (yellow to red) in the GPR-Slice maps (e.g., Figure 4- bottom image). Upon further investigation of this anomalous area in the GPR profiles, ***Anomaly B*** appears to be associated with a high amplitude layer at about 2.5 feet bgs, underlain by disturbed soil to about 3.5 feet. The location of ***Anomaly B*** is indicated with a pink box (dashed pink line) in Figure 1 that represents the extent of disturbance from review of a few key slices and the GPR profiles. Because of the ringing in the concrete mesh and the limited depth of GPR signal penetration within the Building (approximately 3.5 feet at this location), the source of ***Anomaly B*** is not clear. It should be understood that the source of this anomaly cannot be determined without excavation.

A few other possible rectangular GPR anomalies within Grid 2 were identified and painted with pink boxes during the field investigation; these were reviewed and found to be associated with reflections from the ceiling of the warehouse. Additional anomalies evident in the GPR data for Grids 1 and 2 appear to be associated with steel plates and drain grates. Additional anomalies evident in the GPR data for Grid 3 appear to be associated with a detected conduit and the electric track for the automatic gate to the Property.

5.0 LIMITATIONS

The detection of subsurface objects and utilities is dependent upon acquiring reliable data with geophysical instruments above ground. These data may be interpreted as representative of subsurface objects. The electromagnetic waves or fields being measured, however, may be attenuated and/or distorted by a number of factors including soil moisture, corrosion, and proximity to other surface and subsurface structures. A discussion of the limitations of each method follows.

5.1 EM-61

The EM-61 is capable of detecting a 55-gallon drum up to a depth of 3 meters under favorable conditions. We recommended a minimum 10-foot buffer between the survey area and any metallic or metal bearing surface cultural features such as buildings, metallic roll-up doors, entry gates, concrete service ramps, reinforced concrete pads, surface drums or metallic fencing-which could severely compromise the quality of the data. As a result, Spectrum cannot guarantee that metallic USTs are not present beneath these features.

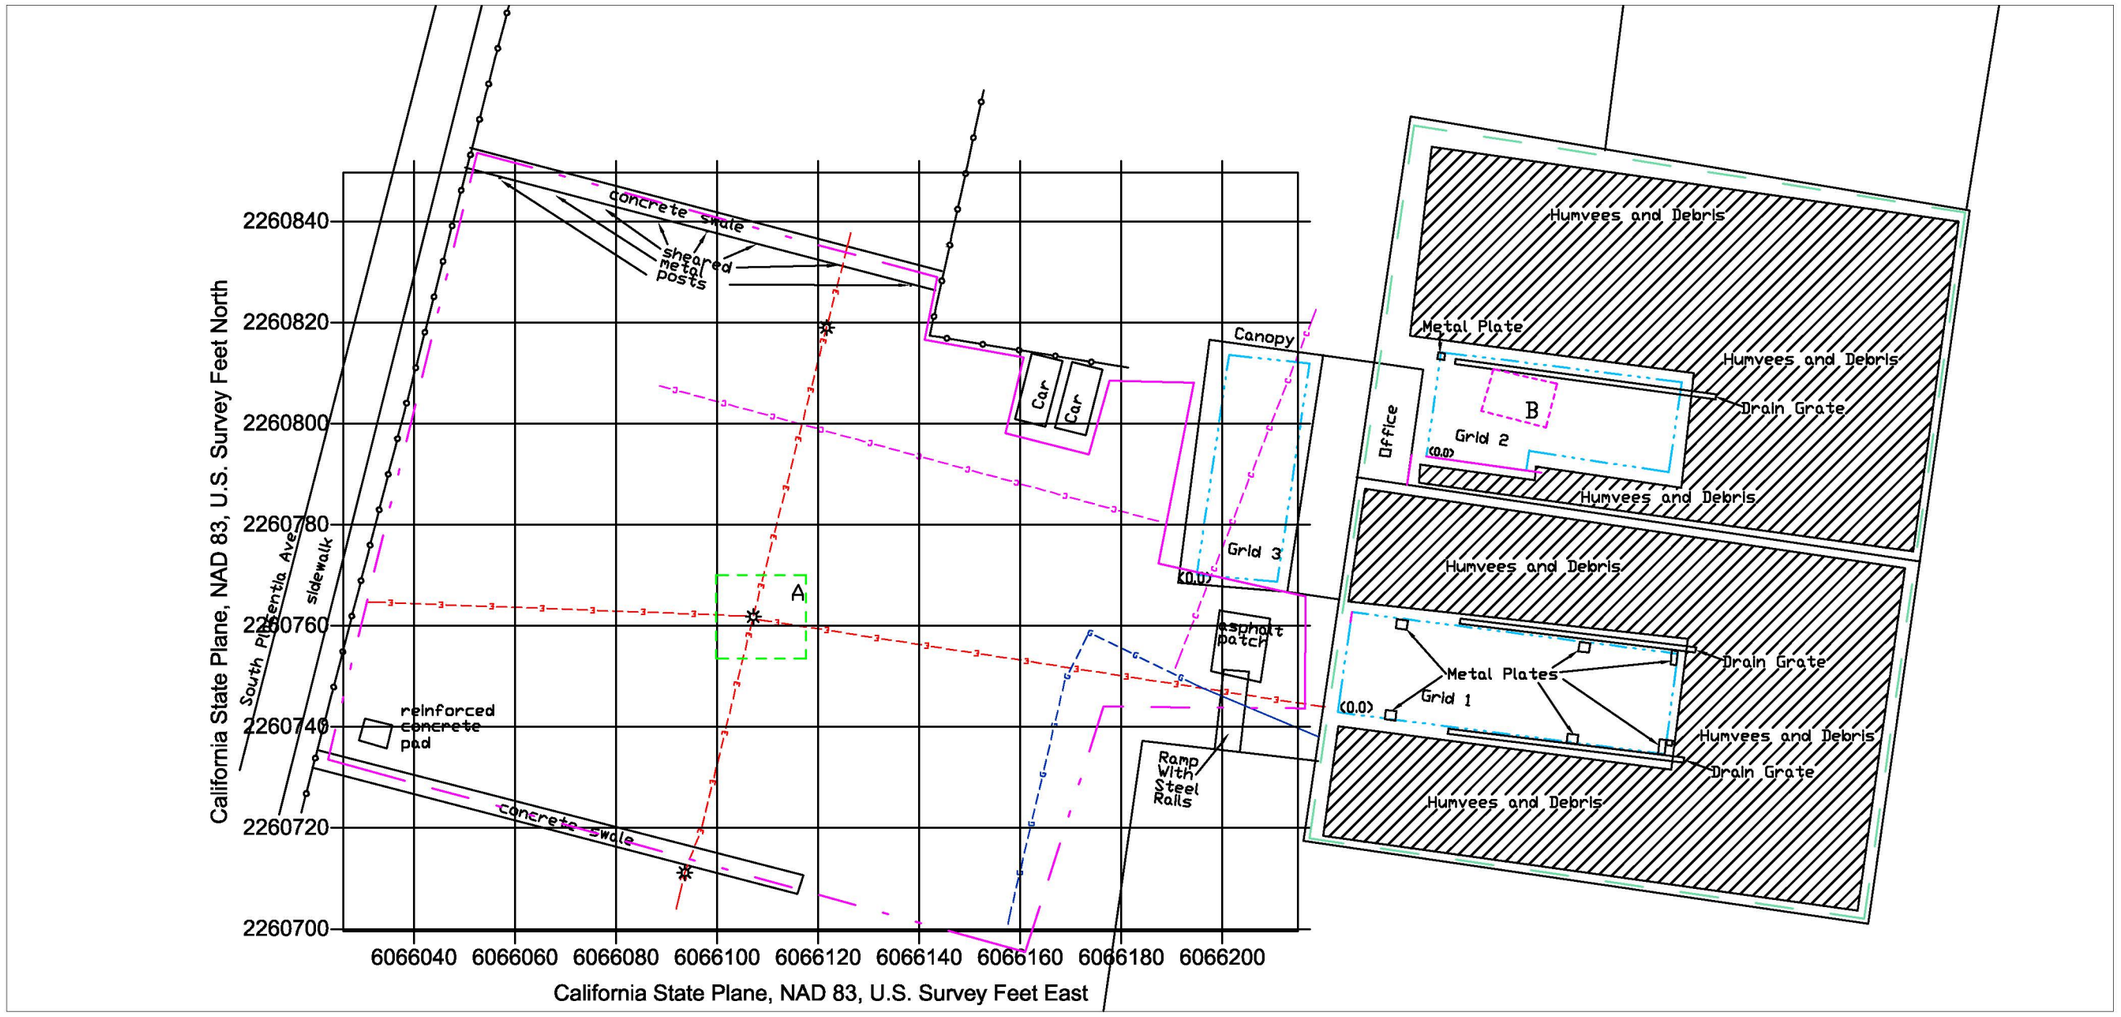

5.2 GPR

The performance capability of GPR is dependent on the electrical conductivity of the soil at the site. If the soil conductivity is high, attenuation of the radar signal in the soil can severely restrict the maximum penetration depth of the radar signal. Under favorable conditions depth of penetration can be greater than 10 feet; however, average depths of GPR penetration in Southern California tend to range between 2-5 feet. Soils high in clay content and moisture will have higher signal attenuation. GPR surveys should be performed in the dry season, if at all possible, especially at sites located in Southern California.

The depth of signal penetration for this site was estimated to be about 2 feet under the metallic canopy in Grid 3 in Area 1, and 3.5 to 4 feet within Grids 1 and 2 in Area 2; therefore, Spectrum cannot guarantee that subsurface features such as USTs are not present at depths greater than about 2 feet beneath Grid 3, and about 3.5 to 4 feet beneath Grids 1 and 2.

5.3 Positioning

The features identified in Figure 1 were located using GPS for positioning (sub-meter accuracy). In addition, because the site map and the EM-61 data contour maps were created using GPS for positioning, the anomalies identified may also contain some positioning error. As a result, all features depicted in Figure 1may be in error with regards to their true GPS position by as much as 3 feet.

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Frey Environmental
Project/Site: 777 Orangethorpe Ave

Job ID: 570-68691-1

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Comments
No additional comments.

Receipt
The samples were received on 8/30/2021 3:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.1º C.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Frey Environmental
Project/Site: 777 Orangethorpe Ave

Job ID: 570-68691-1

Subject: Re: Eurofins Calscience sample confirmation files from 570-68691-1 777 Orangethorpe Ave

EXTERNAL EMAIL*

Hello Tina,

Could you please do the following?

1. Change to a 48 hr turn around time
2. Analyze soil samples SV3-5 and SV3-10 for TPH-C6-C44

Thank you!

Deanna Hoppe

Login Number: 68691
List Number: 1
Creator: Patel, Jayesh

List Source: Eurofins Calscience LLC

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Frey Environmental
Project/Site: 777 Orangethorpe

Job ID: 570-68766-1

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
570-68766-1

Comments
No additional comments.

Receipt
The samples were received on 8/31/2021 2:17 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.6º C.

GC/MS VOA
Method 8260B: The continuing calibration verification (CCV) associated with batch 570-176173 recovered above the upper control limit for Ethanol. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 570-176173/2).

Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) precision for preparation batch 570-176184 and analytical batch 570-176173 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Subject: Eurofins Calscience sample confirmation files from 570-68766-1 777 Orangethorpe

Hello,

Attached please find the sample confirmation files for job 570-68766-1; 777 Orangethorpe

Please feel free to contact me if you have any questions.

Thank you.

Tina Nguyen
Project Manager

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: Frey Environmental
Job ID: 570-68691-2
Project/Site: 777 Orangethorpe Ave

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 8/30/2021 3:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.1º C.

GC/MS VOA
Method 8260B: The following analyte(s) recovered outside control limits for the LCS associated with preparation batch 570-178599 and analytical batch 570-178574: Acetone. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

EXTERNAL EMAIL*

Hello Tina,

Could we also have the following samples analyzed for the full suite of VOCs before the holding window expires:

SV1-5
SV1-10
SV1-15
SV1-20
SV1-25
SV1-30

SV2-5
SV2-10
SV2-15
SV2-20
SV2-25
SV2-30

SV3-5
SV3-10
SV3-15
SV3-20
SV3-25
SV3-30

Thank you!

Sincerely,

Deanna Hoppe
Senior Staff Geologist

Login Sample Receipt Checklist

Client: Frey Environmental

Job Number: 570-68691-2

Login Number: 68691
List Number: 1
Creator: Patel, Jayesh

List Source: Eurofins Calscience LLC

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Frey Environmental
Project/Site: 777 Orangethorpe

Job ID: 570-68766-2

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
F2	MS/MSD RPD exceeds control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 8/31/2021 2:17 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.6º C.

GC/MS VOA
Method 8260B: The matrix spike / matrix spike duplicate / sample duplicate (MS/MSD/DUP) precision for preparation batch 570-178127 and analytical batch 570-178103 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

Method 8260B: The initial calibration curve analyzed in batch 570-178103 was outside method criteria for the following analyte(s): Bromomethane. As indicated in the reference method, sample analysis may proceed; however, any detection or non-detection for the affected analyte(s) is considered an estimated concentration.

Method 8260B: The following analyte recovered outside control limits for the LCS associated with preparation batch 570-178599 and analytical batch 570-178574: Acetone. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Frey Environmental
Project/Site: 777 Orangethorpe

Job ID: 570-68766-2

Client Sample ID: HA1-5 — Lab Sample ID: 570-68766-9

No Detections.

Client Sample ID: HA1-10 — Lab Sample ID: 570-68766-10

No Detections.

Client Sample ID: HA1-15 — Lab Sample ID: 570-68766-11

SOIL VAPOR SAMPLES

OPTIMAL TECHNOLOGY
Specializing in Environmental Field Services

September 3, 2021

Deanna Hoppe
Frey Environmental, Inc.
2817-A Lafayette Avenue
Newport Beach, CA 92663

Dear Deanna:

This letter presents the results of the soil vapor investigation conducted by Optimal Technology (Optimal), for Frey Environmental, Inc. on September 2, 2021. The study was performed at 777 Orangethorpe Ave., Placentia, California.

Optimal was contracted to perform a soil vapor survey at this site to screen for possible chlorinated solvents and aromatic hydrocarbons. The primary objective of this soil vapor investigation was to determine if soil vapor contamination is present in the subsurface soil.

Gas Sampling Method

At each sampling location, an electric vacuum pump set to draw 0.2 liters per minute (L/min) of soil vapor was attached to the existing well and purged prior to sample collection. Vapor samples were obtained in gas-tight syringes by drawing the sample through a luer-lock connection which connects the sampling probe and the vacuum pump. Samples were immediately injected into the gas chromatograph/purge and trap after collection. New tubing was used at each sampling point to prevent cross contamination.

All analyses were performed on a laboratory grade Agilent model 6890N gas chromatograph equipped with an Agilent model 5973N Mass Spectra Detector and Tekmar LSC 3100 Purge and Trap. A Restek column using helium as the carrier gas was used to perform all analysis. All results were collected on a personal computer utilizing Agilent's MS and chromatographic data collection and handling system.

Quality Assurance

5-Point Calibration
The initial five-point calibration consisted of 20, 50, 100, 200 and 500 ul injections of the calibration standard. A calibration factor on each analyte was generated using a best fit line method using the Agilent data system. If the r^2 factor generated from this line was not greater

than 0.990, an additional five-point calibration would have been performed. Method reporting limits were calculated to be 1-100 micrograms per cubic meter (ug/m^3) for the individual compounds.

A daily calibration check was performed using a pre-mixed standard supplied by Scotty Analyzed Gases. The standard contained common halogenated solvents and aromatic hydrocarbons (see Table 1). The individual compound concentrations in the standards ranged between 0.025 nanograms per microliter (ng/ul) and 0.25 ng/ul.

TABLE 1

Acetone	Benzene	Bromobenzene	Bromochloromethane
Bromodichloromethane	Bromoform	Bromomethane	2-Butanone (MEK)
n-Butylbenzene	sec-Butylbenzene	tert-Butylbenzene	Carbon Tetrachloride
Chlorobenzene	Chloroethane	Chloroform	Chloromethane
2-Chlorotoluene	4-Chlorotoluene	Cyclohexane	Dibromochloromethane
1,2-Dibromo-3-chloropropane	1,2-Dibromoethane	Dibromomethane	1,2-Dichlorobenzene
1,3-Dichlorobenzene	1,4-Dichlorobenzene	Dichlorodifluoromethane	1,2-Dichloroethane
1,1-Dichloroethane	1,1-Dichloroethene	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene
1,2-Dichloropropane	2,2-Dichloropropane	1,3-Dichloropropane	1,1-Dichloropropene
Ethylbenzene	Freon 113	Hexachlorobutadiene	Isopropylbenzene
p-Isopropyltoluene	Methylene Chloride	4-Methyl-2-Pentanone	Naphthalene
n-Propylbenzene	Styrene	1,1,1,2-Tetrachloroethane	1,1,2,2-Tetrachloroethane
Tetrachloroethene	Toluene	1,2,3-Trichlorobenzene	1,2,4-Trichlorobenzene
1,1,1-Trichloroethane	1,1,2-Trichloroethane	Trichloroethene	Trichlorofluoromethane
1,2,3-Trichloropropane	1,2,4-Trimethylbenzene	1,3,5-Trimethylbenzene	Vinyl Chloride
m/p-Xylene	o-Xylene	Diisopropyl Ether	Ethyl Tert Butyl Ether
MTBE	Tert-Amyl Methyl Ether	Tertiary Butyl Alcohol	Isobutane

Sample Replicates
A replicate analysis (duplicate) was run to evaluate the reproducibility of the sampling system and instrument. The difference between samples did not vary more than 20%.

Equipment Blanks
Blanks were run at the beginning of each workday and after calibrations. The blanks were collected using an ambient air sample. These blanks checked the septum, syringe, GC column, GC detector and the ambient air. Contamination was not found in any of the blanks analyzed during this investigation. Blank results are given along with the sample results.

Purge Volume
The standard purge volume of three volumes was purged in accordance with the July 2015 DTSC/RWQCB Advisory for Active Soil Gas Investigations.

Tracer Gas Leak Test
A tracer gas was applied to the soil gas probes at each point of connection in which ambient air could enter the sampling system. These points include the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals. Isobutane was used as the tracer gas. No Isobutane was found in any of the samples collected.

Shut-in Test
A shut-in test was conducted prior to purging or sampling each location to check for leaks in the above-ground sampling system. The system was evaluated to a minimum measured vacuum of 100 inches of water. The vacuum gauge was calibrated and sensitive enough to indicate a water pressure change of at least 0.5 inches.

Scope of Work

To achieve the objective of this investigation a total of 16 vapor samples were collected from 5 locations at the site. Sampling depths, vacuum readings, purge volume and sampling volumes are given on the analytical results page. All the collected vapor samples were analyzed on-site using Optimal's mobile laboratory.

Subsurface Conditions

Subsurface soil conditions offered sampling flows at 0" water vacuum.

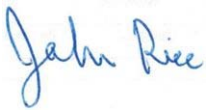

Results

During this vapor investigation, all sixteen samples contained levels of Tetrachloroethene (PCE) ranging from 381 ug/m^3 to 1,107 ug/m^3. Three samples contained levels of Toluene ranging from 20 ug/m^3 to 33 ug/m^3. Five samples contained levels of TPH-g ranging from 4,686 ug/m^3 to 12,578 ug/m^3. None of the other individual compounds listed in Table 1 above were detected above the listed reporting limits. A complete table of analytical results is included with this report.

Disclaimer

All conclusions presented in this letter are based solely on the information collected by the soil vapor survey conducted by Optimal Technology. Soil vapor testing is only a subsurface screening tool and does not represent actual contaminant concentrations in either the soil and/or groundwater. We enjoyed working with you on this project and look forward to future projects. If you have any questions, please contact me at (877) 764-5427.

Sincerely,

John Rice
Project Manager
